

**Question:** Benjamin went to a bookstore and purchased a variety of books. He bought 5 copies of a sci-fi novel, each priced at \$20, 3 copies of a history book priced at \$30 each, and 2 copies of a philosophy book for \$45 each. What was the total cost of his purchases?

**Assistant A:**

The total cost of Benjamin's purchases was \$115.

**Assistant B:**

The total cost of his purchases is \$295.

**GPT-4 Judgment:**

Assistant B provided the correct answer to the user's question. Assistant A's response was incorrect. To calculate the total cost of Benjamin's purchases, we need to multiply the number of books by their respective prices and then add the results:

5 sci-fi novels \* \$20 = \$100

3 history books \* \$30 = \$90

2 philosophy books \* \$45 = \$90

Total cost = \$100 + \$90 + \$90 = \$295

Assistant B's response is accurate and directly answers the user's question. Therefore, my final verdict is: [[B]]

**GPT-4's Answer (if asked separately):**

The cost of the sci-fi novels is  $5 * \$20 = \$100$ .

The cost of the history books is  $3 * \$30 = \$90$ .

The cost of the philosophy books is  $2 * \$45 = \$90$ .

The total cost of his purchases is  $\$100 + \$90 + \$90 = \$280$ . Answer:  $\boxed{280}$ .
