

time

agrawal concept drift data stream

t_1

$$X_{t_1}^{\text{salary}} \sim \text{Unif}([20, 150])$$

$$Y_{t_1} = f_1(X_{t_1}^{\text{age}}, X_{t_1}^{\text{education}})$$

(a) initial setting

t_2

$$X_{t_2}^{\text{salary}} \sim \text{Unif}([20, 150])$$

$$Y_{t_2} = f_2(X_{t_2}^{\text{age}}, X_{t_2}^{\text{salary}})$$

(b) after real drift

$$P_{t_1}(Y|X) \neq P_{t_2}(Y|X)$$

t_3

$$X_{t_3}^{\text{salary}} \sim \text{Unif}([20, 200])$$

$$Y_{t_3} = f_2(X_{t_3}^{\text{age}}, X_{t_3}^{\text{salary}})$$

(c) after virtual drift

$$P_{t_2}(X) \neq P_{t_3}(X)$$
