

## Data preparation

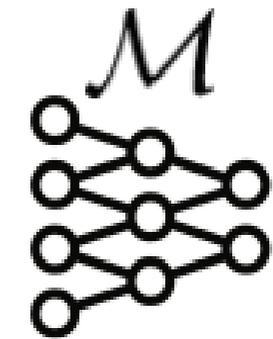

- ①  $4n$  LWE samples
- ② Resample  $\mathbf{a}_s$  to make  $\binom{4n}{n}$  matrices
- ③ Reduce with BKZ

## Model training

$$\mathbf{R}b_i = \mathbf{R}(\mathbf{A}_i \mathbf{s} + \mathbf{e})$$

$$(\mathbf{R}\mathbf{A}, \mathbf{R}b)$$

- ④ Train transformer on BKZ-reduced samples

After each epoch

If  $\mathbf{s} \in [-1, 0, 1]$  or  $\mathbf{s} \sim N(0, k)$   
use 2-bit distinguisher

**Distinguisher**

$\mathbf{s}'$  If  $\mathbf{s}' = \mathbf{s}$ , stop;  
else, keep training

- ⑤ Run secret recovery on trained model
