
Global Affine Transformation  Misregistration

Piecewise Registration

(a) Diffusion Tensor Images
and T2-weighted Images

(b) Principal Eigenvector Maps
and T2-weighted Images

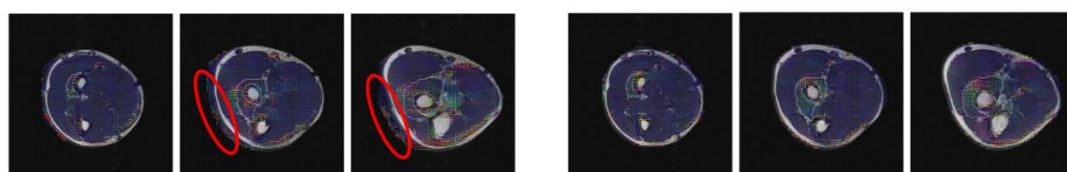

Figure. To check the registration results, (a) diffusion tensor images in coronal and sagittal views and (b) principal eigenvector maps in axial view were overlaid on T2-weighted images, respectively, for global affine transformation and piecewise registration. The local misregistration (marked by red circles), especially in both ends, was corrected by piecewise registration.
