Driver is in control of the vehicle whenever these driver support features are engaged – even if he is not operating the pedals or steering the wheel

The driver is not in control of the vehicle when these automated driving features are engaged – even if he is seated in „ the driver’s seat“

The driver must constantly supervise these support features.  
The driver must steer, brake or accelerate as needed to maintain safety

When the feature requests,  
the driver must take control

These automated driving features will not require the driver to take over the dynamic driving task

### Driver support features

These features are limited to providing warnings and momentary assistance

These features provide steering  
OR brake / acceleration support to the driver

These features provide steering  
AND brake / acceleration support to the driver

- Automatic emergency braking
- Blind spot warning
- Lane departure warning

- Lane centering  
OR
- Adaptive cruise control

- Lane centering  
AND
- Adaptive cruise control

### Automated driving features

These automated driving features can drive the vehicle under limited conditions and will not operate unless all required conditions are met

This feature can drive the vehicle under all conditions

- Traffic jam chauffeur

- Local driver-less taxi
- Pedals or steering wheel may or may not be installed
