

PyTEI Error Injection Framework

user config

error_rate: 1e-9, 1e-8, ...
components: MLP, embedding, ...
...

```
with torch.no_grad():  
    for param_name, param in model.named_parameters():  
        if param_name in targets:  
            param = apply_error_map(param, error_map)  
    ...
```

Injection information:
#bit errors injected
#total bits

Performance evaluation:
RMSE, AUC-ROC score,
...

Error Map Generation

Error Map

Error Injection

Error Mitigation

(None, SBP, or activation clipping)

**Post-injection
Summary**

DRS Model

dfm:
linear.bias
linear.fc.weight
embedding.weight
mlp.mlp.0.weight
...

param information

update model with
error-injected params

performance metrics
