

# LLM as Controller

## Sub-Task Detection

### Schema-based Instruction

Task name
Task arguments
Output type

### Demonstration-based Instruction

- Input: dialogue context

- Output: expected task

Sub-Task

## Model Matching

### Dynamic Sub-Task Model Matching

Sub-Task Goal

Model 1 description

Model 2 description

Model 3 description

...

Expert Model

## Sub-Task Execution

### Hybrid Inference Endpoints

- Local inference endpoints

- Online API calls

Sub-Task Output

## Response Generation

### Summary-based Generation

Sub-Task name
Expert model
Sub-Task output

Recommendation Result  
Generated Response

Updated LLM
