

Item		Expert Opinion	Adoption	Modify	Explanation
Medical Interviewing Skills				Reserve	
1.1	Focus on patients' self report, and conduct relevant inquiries around the current medical history accurately, including the cause of the onset, the nature, degree, time and regularity of symptoms, aggravating or mitigating factors, accompanying symptoms, diagnosis and treatment, etc.	1. The focus is on content, not accuracy 2. Simplify item descriptions	Adopt	Revise	The content of the current medical history inquired should include at least one of the following items: the cause of the onset, the nature, degree, time and regularity of occurrence of symptoms, aggravating or mitigating factors, accompanying symptoms, diagnosis and treatment, etc.
1.2	Guide patients to provide correct and sufficient disease-related information, including other medical histories such as past history, personal history, allergy history, etc.	1. Add examples include medication history, previous surgery, ongoing treatment, etc. 2. The scope of examples should be increased to include family history 3. Simplify item description	Adopt All	Revise	Inquiring about past medical history should include at least one of the following items: surgical history, personal history, family history, allergy history, medication history, etc.
1.3	Use open-ended questions to encourage patients to provide more detailed information	1. Ask open-ended questions based on the aforementioned chief complaints, around the history of present illness/main complaints 2. Simplify item description	Not Adopt	Reserve	For example: Do not directly ask "Do you have chest tightness?", but should use open questions "Where do you feel uncomfortable?". (Example excerpted from "Clinical Diagnostics (Eight-Year Third Edition)", Human Health Publishing House)
1.4	The question should be easy to be understood, and avoid using medical terminology that is too complicated or difficult to understand, such as tenesmus, epistaxis, etc.	Simplify item description	Adopt	Reserve	For example: CMV antibody, tenesmus, epistaxis, etc.
1.5	Explain to the patient the basis or purpose of the medical terminology, diagnosis, treatment, etc.	Simplify item description	Adopt	Revise	Medical conclusions include: disease diagnosis, examination methods, treatment plan, etc.
1.6	Avoid providing medically harmful information to patients, such as healthcare information that has not been substantiated by scientific research, etc.	Simplify item description	Adopt	Reserve	Harmful medical information includes: such as information error: semaglutide is also known as rifampicin; scientific rumors: eating mung beans to treat tumors, etc.
1.7	Be able to effectively judge the occurrence of medical emergencies in patients and make appropriate responses, such as informing patients of the risk of hypoglycemia and emergency treatment plans in a timely manner when the patient's blood sugar is lower than 3.2mmol/L	Simplify item description	Adopt	Reserve	For example, when the patient's blood sugar is 2.7mmol/L, timely inform the risk of hypoglycemia and the emergency treatment plan
1.8	Proactively ask the patient for relevant information that can be used to aid in the differential diagnosis	Simplify item description	Adopt	Reserve	For example, for the information provided by patients, focus on and inquire about the information that is helpful for judging the condition; do not pay too much attention to and inquire about the information irrelevant to the judgment of the disease. If the patient is more concerned about this, a reasonable explanation should be provided
1.9	Inquiry ideas are clear and focused	Similar with item 1.8		Delete	
Humanistic care				Reserve	
2.1	Treat patients with respect, care and empathy during consultations	Simplify item description	Adopt	Reserve	For example: "I am very concerned to hear about your condition", etc.
2.2	Effectively organize and converge the consultation process, including reasonable questioning, building a trusting relationship with the patient and encouraging the patient, obtaining comprehensive and accurate information, and leading the discussion to a conclusion	Simplify item description	Adopt	Reserve	Do not make invalid expansion after obtaining enough information to draw a medical conclusion
2.3	Coping reasonably with patients' emotional displays in communication and providing appropriate emotional support	Simplify item description	Adopt	Reserve	When the patient shows negative emotions, give reasonable counseling
2.4	Able to value the patient's individual wishes in the medical decision-making process	It is recommended to adhere to certain medical principles and simplify item description.	Adopt	Revise	For example, if a patient requires conservative treatment but does not violate medical principles, the patient's ideas should be adopted
2.5	Avoid expressions of bias of any kind			Reserve	For example, prejudice against eating habits in different regions, etc.
2.6	Be patient with and explain patients' questions	Very necessary, examples can range from primary disease to complications and progression	Adopt	Revise	For example: Rhetorical questions such as "Didn't you explain it just now?" can be judged as 0 points
2.7	Be courteous and appropriate in communication	Simplify item description	Adopt	Reserve	Polite words include: hello, thank you very much, etc.
2.8	Protect patient privacy and avoid asking privacy questions when not required by the disease	Simplify item description	Adopt	Reserve	Privacy concerns include spouse name, home address, etc.
2.9	Reasonably respond to non-medical demands of patients in dialogue	Similar with item 1.8 and 2.2		Delete	
Comprehensive clinical diagnosis and treatment ability				Revise	
3.1	Identify primary and secondary content of information provided by patients, and respond reasonably. For example, for information provided by patients, you should focus on and inquire about the information that is helpful for judging the condition; If the patient is more concerned about this, a reasonable explanation should be provided	Similar with item 1.8		Delete	
3.2	Judging the credibility of the information provided by the patient and being able to verify it with appropriate questions, e.g. if a patient states that he or she has a fever but no temperature measurement is taken, the information is not reliable	Simplify item description	Adopt	Reserve	For example, if the patient states that he has a fever, but cannot give the temperature value, the information is inaccurate
3.3	Combine information provided by the patient to arrive at a reasonable initial (suspect) and differential diagnosis	Simplify item description	Adopt	Reserve	
3.4	Consider the patient's condition and personal wishes, and put forward an appropriate plan for definite diagnosis when the diagnosis basis is insufficient. The plan should include necessary means that help to confirm the diagnosis and do not include irrelevant means	1. Similar to differential diagnosis, some definitions are needed, such as "probably", "possibly", "with a certain probability", "do not rule out", etc. 2. Consider the standard of diagnosis and treatment, and adjust the order with the patient's condition and personal wishes 3. Simplify the item	Adopt All	Revise	
3.5	Correctly explain to the patient the basis for the proposed diagnosis	1. This may not be necessary. 2. Medical staff should explain the patient's condition and medical measures during the diagnosis and treatment activities. If a special examination is required, the medical personnel shall promptly explain the medical risks, alternative medical plans, etc. to the patient. 3. For example, explain the reason or basis for the diagnosis plan 4. Simplify the item	Take Suggestion 3 and 4	Revise	The diagnostic program includes inspection, inspection and other means
3.6	Correctly explain to patients the basis for the diagnosis of the disease and the basis for excluding other differential diagnoses	1. This does not need to be explained to the patient 2. Add "or explain the condition to the patient correctly" 3. Simplify the item	Take Suggestion 3	Revise	
3.7	Considering the patient's condition and personal wishes, combined with the patient's condition and diagnosis and treatment norms, propose the most reasonable treatment plan	1. The treatment plan needs to be considered. If the position of the general practitioner is not only triage, then this step is required, but if it is only triage, you can consider ignoring this step 2. Mention the patient's condition twice, repeat 3. Diagnosis and treatment norms, patient condition, and personal wishes, order adjustment 4. Simplify the item	Take recommendations 2, 4	Revise	
3.8	Correctly explain to patients the reasons for proposed treatment options	1. Consultation scenarios need to be considered carefully. 2. Medical personnel should explain the condition and medical measures to patients during diagnosis and treatment activities. If surgery or special treatment is required, the medical personnel shall promptly explain the medical risks and alternative medical plans to the patient. 3. For example, explain the reason or basis for the proposed treatment plan	Take Suggestion 3	Revise	
3.9	Make necessary reminders and suggestions to patients on certain important medical concerns, such as reminders of drug incompatibility	Similar with item 1.6		Delete	
Overall Clinical Competency				Reserve	
4.1	Dissatisfied			Reserve	
4.2	Satisfactory			Reserve	
4.3	Excellent			Reserve
