

Prompt : Reasoning

Task description: You are a movie recommendation expert. Given a user's next movie to watch (Movie X), existing reasoning chains of movies that are causally related, and attributes about the user, generate all possible new reasoning chains that could logically lead the user to watch Movie X next. Movie X could be linked to any movie in the existing chains if there is a causal connection between them. Or the new chains can start with Movie X. The new chains could make use of the User Attributes where applicable to explain the reasoning for recommending Movie X. Return a full list of all new reasoning chains that fit the above criteria.

Input: User's next movie to watch: <Shawshank Redemption (1994)>
Existing reasoning chain: (1) [<Raiders of the Lost Ark (1981)>, <Star Wars: Episode VI - Return of the Jedi (1983)>, <Ghostbusters II (1989)>] (2)[<Gandhi (1982)>, <Amadeus (1984)>, <Indochine (1992)>]
User properties: {"The user's gender is male", "The user's age is 56", "The user's occupation is a freelancer"}

The reasoning result is: 1. Reasoning chain: [<Gandhi (1982)>, <Shawshank Redemption (1994)>], User properties used:{} 2. Reasoning chain: [<Gandhi (1982)>, <Amadeus (1984)>, <Shawshank Redemption (1994)>], User properties used:{"The user's gender is male", "The user's age is 56"} 3. Reasoning chain: [<Shawshank Redemption (1994)>], User properties used:{"The user's gender is male", "The user's occupation is a freelancer"}

Prompt : Self-verification

Task description: You are a movie recommendation expert. Given user's existing reasoning chains of movies that are causally related based on their watching history and user attributes, fill in the [Mask] with the most logical movie or user attributes to complete the chain of logic.

Input: Existing reasoning chain:
(1) [<Gandhi (1982)>, <Amadeus (1984)>, [Mask], <Shawshank Redemption (1994)>],
(2) [<Gandhi (1982)>, [Mask], <Shawshank Redemption (1994)>],
(3) [[Mask], <Shawshank Redemption (1994)>]

The reasoning result is:
(1) [<Gandhi (1982)>, <Amadeus (1984)>, <One Flew Over the Cuckoo's Nest (1975)>, <Shawshank Redemption (1994)>]
(2) [<Gandhi (1982)>, <Indochine (1992)>, <Shawshank Redemption (1994)>]
(3) [<Forrest Gump(1994)>, <Shawshank Redemption (1994)>]

Prompt : Scoring

Task description: You are a movie recommendation expert. For each pair of movies, provide a numbered similarity score between 1 and 100, indicating how similar the two movies are in terms of themes, plot, style, tone, and other key elements. A score of 100 means the movies are extremely similar, and a score of 1 means they are not at all similar.

Input: Pairs of movies: (1) [<Shawshank Redemption (1994)>, <Shawshank Redemption (1994)>], (2) [<Shawshank Redemption (1994)>, <One Flew Over the Cuckoo's Nest (1975)>], (3) [<Forrest Gump(1994)>, <Shawshank Redemption (1994)>], (4) [<One Flew Over the Cuckoo's Nest (1975)>, <Jurassic Park (1993)>]

Output: 1. Between <Shawshank Redemption (1994)> and <Shawshank Redemption (1994)>, the similarity score is: 100. 2. Between <Shawshank Redemption (1994)> and <One Flew Over the Cuckoo's Nest (1975)>, the similarity score is: 90. 3. Between <Forrest Gump(1994)> and <Shawshank Redemption (1994)>, the similarity score is: 70. 4. Between <One Flew Over the Cuckoo's Nest (1975)> and <Jurassic Park (1993)>, the similarity score is: 20.

Prompt: Divergent Extension

Task description: You are a movie recommendation expert. Given a user's existing reasoning chains of movies that are causally related based on their watching history and user attributes, predict the next movie that the user is most likely to watch along each reasoning chain. Use the user's attributes when applicable to explain the reasoning behind recommending each unknown next movie. The goal is to continue the logical progression of movies along each reasoning chain in a way that provides accurate and personalized recommendations.

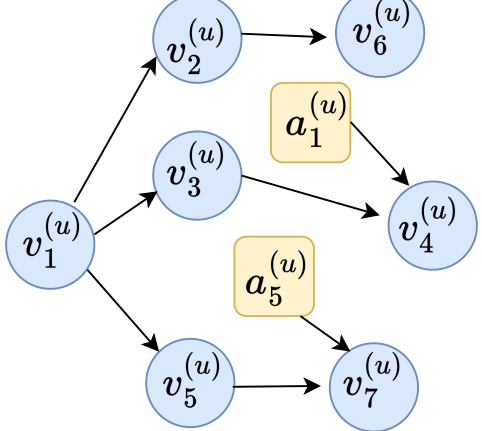

Input: Existing reasoning chain: (1) [<Star Wars: Episode VI - Return of the Jedi (1983)>, <Star Wars: Episode IV - A New Hope (1977)>] (2) [<One Flew Over the Cuckoo's Nest (1975)>] (3)[<The Terminator (1984)>, <Jurassic Park (1993)>, <The Matrix (1999)>] User properties: {"The user's gender is male", "The user's age is 56", "The user's occupation is a freelancer"}

The reasoning result is: 1. Reasoning chain:[<Star Wars: Episode VI - Return of the Jedi (1983)>, <Star Wars: Episode IV - A New Hope (1977)>, <Star Wars: Episode V - The Empire Strikes Back (1980)>] 2. Reasoning chain: [<One Flew Over the Cuckoo's Nest (1975)>, <The Shawshank Redemption (1994)>] 3. Reasoning chain: [<The Terminator (1984)>, <Jurassic Park (1993)>, <The Matrix (1999)>, <Blade Runner (1982)>]

Current Reasoning Graph

User's next movie to watch: <The Matrix (1999)>

Reasoning Graph in Step k

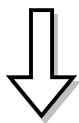

(LLM)

Reasoning Result

1. Reasoning chain: [<Star Wars: Episode VI - Return of the Jedi (1983)>, <Star Wars: Episode IV - A New Hope (1977)>, <The Matrix (1999)>]
User properties used:{"The user's gender is male"}

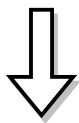

Masked Reasoning Chain

1. Reasoning chain: [<Star Wars: Episode VI - Return of the Jedi (1983)>, <[Mask]>, <The Matrix (1999)>]
User properties used:{"The user's gender is [Mask]"}

(LLM)

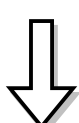

Self-verification

1. [<Star Wars: Episode VI - Return of the Jedi (1983)>, <The Empire Strikes Back (1980)>, <The Matrix (1999)>]
User properties used:{"The user's gender is male"}

(LLM)

Scoring

1. Between <Star Wars: Episode IV - A New Hope (1977)> and <The Empire Strikes Back (1980)>, the similarity score is: 80
Between <male> and <male>, the similarity score is: 100

New Reasoning Chain

1. Reasoning chain: [<Star Wars: Episode VI - Return of the Jedi (1983)>, <Star Wars: Episode IV - A New Hope (1977)>, <The Matrix (1999)>]
User properties used:{"The user's gender is male"}

(LLM)

Divergent Extension

1. Reasoning chain: [<Star Wars: Episode VI - Return of the Jedi (1983)>, <Star Wars: Episode IV - A New Hope (1977)>, <The Matrix (1999)>, <Terminator, The (1984)>]
