Abstract

1 The advent of large language models (LLMs) and their adoption by the legal community has given rise to the question: what types of legal reasoning can LLMs perform? To enable greater study of this question, we present LEGALBENCH: a collaboratively constructed legal reasoning benchmark consisting of 162 tasks covering six different types of legal reasoning. LEGALBENCH was built through an interdisciplinary process, in which we collected tasks designed and hand-crafted by legal professionals. Because these subject matter experts took a leading role in construction, tasks either measure legal reasoning capabilities that are practically useful, or measure reasoning skills that lawyers find interesting. To enable cross-disciplinary conversations about LLMs in the law, we additionally show how popular legal frameworks for describing legal reasoning—which distinguish between its many forms—correspond to LEGALBENCH tasks, thus giving lawyers and LLM developers a common vocabulary. This paper describes LEGALBENCH, shows how it can be used to evaluate LLMs, and illustrates empirically the directions for future research that it enables.

16 1 Introduction

17 Advances in large language models (LLMs) are leading American lawyers and administrators to reexamine the practice of law [27].¹ Proponents have argued that LLMs could alter how lawyers approach tasks ranging from brief writing to corporate compliance [75]. By making legal services more accessible, they could eventually help alleviate the United States’ long standing access-to-justice crisis [61, 16]. This perspective is informed by the observation that LLMs possess special properties

¹In using “LLMs”, we are referring to language models which evince in-context learning capabilities. This behavior has classically been observed in models with at least a billion parameters.

22 which, it is argued, make them more suited for legal tasks. The models’ capacity to learn new tasks
23 from limited labeled data would reduce the manual data labeling costs that ordinarily burden the
24 development of legal language models [8]. Their apparent proficiency at sophisticated reasoning
25 tasks would also make them ideal for the rigor of law, which requires parsing obtuse texts with heavy
26 jargon, and inferential processes which combine different modalities of reasoning [73].

27 This excitement, however, is tempered by the fact that legal applications often involve significant
28 risk [23]. Existing work has shown that LLMs are capable of generating content that is offensive,
29 misleading, and factually incorrect [5, 40]. Such behaviors—if replicated in legal applications [52]—
30 could result in substantial harms [68], with much of the potential burden imposed on traditionally
31 marginalized and under-resourced populations [57, 64]. The safety implications thus create a pressing
32 need to develop infrastructure and processes for benchmarking LLMs in legal contexts.

33 However, significant challenges face practitioners seeking to assess whether LLMs can perform
34 legal reasoning. The first challenge is the scarcity of benchmarks for assessing legal reasoning for
35 LLMs [73]. Prior work on legal language evaluation focuses on finetuning models, which require
36 significant amounts of labeled task data to perform well, and cannot be guided via natural language
37 prompts [12]. Alternatively, benchmarking efforts have focused on professional certification exams
38 like the Multistate Bar Exam [34]. The second challenge is the incongruity between the ways in
39 which existing benchmarks and lawyers frame “legal reasoning.” Existing benchmarks coarsely
40 generalize all tasks involving legal data or laws as measuring “legal reasoning.” In contrast, lawyers
41 recognize that legal reasoning is a broad umbrella term encompassing many different types of
42 reasoning [22]. Different legal tasks require different skills and bodies of knowledge. Because
43 existing legal benchmarks fail to draw these distinctions, it is difficult for legal professionals to
44 contextualize the performance of modern LLMs within their own understanding of legal competency.
45 In short: legal benchmarks do not use the same vocabulary or conceptual framework as the legal
46 profession.

47 In light of these limitations, we believe that rigorously evaluating the legal reasoning capabilities of
48 LLMs will require the legal community to take a more proactive role in the process of benchmarking.
49 To that end, we present LEGALBENCH—the first steps towards constructing an interdisciplinary
50 collaborative legal reasoning benchmark for the English language. Over the past year, the authors
51 and contributors of this paper—drawing from their diverse legal and computer science backgrounds
52 and expertise—have come together to assemble 162 tasks, each of which measures a specific type of
53 legal reasoning. As a research project, we highlight three components of LEGALBENCH:

- 54 1. LEGALBENCH was constructed from a mix of existing legal datasets (restructured for
55 the few-shot LLM paradigm), and hand-crafted datasets created and contributed by legal
56 professionals. The legal professionals involved in this collaboration were asked to contribute
57 datasets that they believed to either measure an interesting legal reasoning skill, or to capture
58 a practically useful application for LLMs in the law. High performance on LEGALBENCH
59 tasks thus provides useful information, allowing lawyers to validate their assessment of an
60 LLM’s legal competency, or identify an LLM that could be used in their workflow.
- 61 2. LEGALBENCH tasks are organized into an extensive typology which describes the types
62 of legal reasoning required to perform the task. Because this typology is drawn from
63 frameworks familiar to the legal community, it enables legal professionals to meaningfully
64 engage in discussions of LLM performance, using a terminology and conceptual framework
65 familiar to them [22, 56].
- 66 3. Finally, LEGALBENCH is intended as a platform to support further research. For AI
67 researchers—who lack legal expertise—LEGALBENCH comes with significant support
68 for understanding how to prompt and evaluate different tasks. And as more of the legal
69 community begins to engage with the potential impact and role of LLMs, we hope to grow
70 LEGALBENCH by incorporating newly created tasks.

71 In this paper, we make the following contributions:

- 72 1. First, we present a typology for organizing and describing legal tasks in terms of the types
73 of reasoning they require. This typology is drawn from frameworks lawyers use to describe
74 legal reasoning [56].

- 75 2. Second, we provide an overview of the tasks in LEGALBENCH, describing the process by
76 which they were constructed, important dimensions of heterogeneity, and limitations. A full
77 description of each task is provided in the Appendix.
- 78 3. Finally, we present results for several types of language models on LEGALBENCH: API-
79 access models, open-source models, and instruction-tuned models. We make initial observa-
80 tions on trends in performance and highlight several directions for further research.

81 We hope that this benchmark will be interesting to a diverse set of communities. Practitioners may
82 use these tasks to determine whether and where LLMs can be integrated into existing workflows to
83 improve outcomes for clients. Legal academics may benefit from observing the types of annotation
84 that LLMs are capable of [74], and different forms of empirical scholarly work they may enable.
85 Computer scientists may benefit from studying the performance of these models in new domains,
86 where distinct lexical properties and unique tasks may surface new insights.

87 Before we progress further, we note that the purpose of this work isn't to evaluate whether computa-
88 tional systems *should* replace lawyers and legal officers, or to understand the positive and negative
89 impacts of that replacement [23]. Rather, our goal is to construct artifacts that enable the relevant
90 stakeholders and affected communities to better understand, *empirically*, the capacity for LLMs to
91 perform different types of legal tasks. Given the proliferation of computational legal tools, we believe
92 that answering this question is vital for ensuring their safe and ethical usage.

93 2 Related work

94 **Benchmarking legal reasoning** A number of works have developed law-related NLP benchmarks,
95 spanning classification, information-extraction, multiple-choice questions, and summarization [53, 31,
96 12, 73, 35]. These works largely focus on designing benchmarks for older generation NLP models—
97 like BERT and variants—and the technical challenges they present (e.g., document length [31] or
98 domain adaption [73]). In contrast, LEGALBENCH focuses on few-shot LLMs, which are “instructed”
99 on tasks via prompting. The closest work on this subject includes some efforts to apply LLMs to
100 existing benchmarks [11, 7, 36], and studies of standardized tests [34].

101 A notable consequence of focusing on few-shot LLMs is that LEGALBENCH can contribute a much
102 more diverse set of legal reasoning tasks. Traditional NLP methods require a large training set and a
103 smaller evaluation set. The cost of legal annotations means that constructing benchmarks has required
104 extraordinary financial investment [31, 53] or a “natural” source of existing annotations [73, 12].
105 Because the few-shot/prompting regime requires only a few labeled demonstrations, creating training
106 sets isn't necessary, and the effort they otherwise would have consumed can be allocated towards
107 developing new tasks.

108 **Connections to other LLM benchmarking efforts** We highlight connections to two broader
109 research efforts. First, we draw inspiration from existing efforts within NLP and machine learning to
110 define fine-grained measures of performance, which allow researchers to discuss model capabilities
111 with precision and specificity. Examples include the diagnostic set of the GLUE Benchmark [66], the
112 “reasoning patterns” studied in [47], and the task organization used in HELM [40]. We additionally
113 draw inspiration from other large-scale collaborative efforts in AI, including the BigBench project [55],
114 and studies in medicine [15]. We believe this paradigm of expert-driven evaluation is essential for
115 specialized domains like law.

116 3 The LEGALBENCH typology

117 LEGALBENCH identifies six types of legal reasoning that LLMs can be evaluated for: (1) issue-
118 spotting, (2) rule-recall, (3) rule-application, (4) rule-conclusion, (5) interpretation, and (6) rhetorical
119 analysis. We first justify the selection of these types by providing background on how the legal
120 profession frames “legal reasoning,” and the connections to our typology. We then illustrate how task
121 datasets may be used to evaluate LLMs for each type, using examples from LEGALBENCH.

122 Though this framework draws heavily on American legal thought, we find it can be easily extended
123 to characterize LEGALBENCH tasks that implicate non-American bodies of law. We also note that
124 our types are non-exhaustive, and in future work hope to consider additions to these types.

125 **3.1 Frameworks for legal reasoning**

126 **IRAC** American legal scholars often describe “legal reasoning” as the process of determining the
127 legal conditions that arise from a set of events or occurrences, with reference to both prior cases and
128 codified laws [22]. A common framework for executing this type of legal reasoning is the **Issue,**
129 **Rule, Application and Conclusion (IRAC)** framework [69, 56]. In this framework, legal reasoning
130 decomposes into four sequential steps.

131 First, lawyers identify the legal issue in a given set of facts (**issue spotting**). An issue is often either
132 (1) a specific unanswered legal question posed by the facts, or (2) an area of law implicated in the
133 facts. Depending on the setting, a lawyer may be told the issue, or be required to *infer* a possible
134 issue.

135 Second, lawyers identify the relevant legal rules for this issue (**rule recall**). A rule is a statement
136 of law which dictates the conditions that are necessary (or sufficient) for some legal outcome to be
137 achieved. In the United States, rules can come from a variety of sources: the Constitution, federal
138 and state statutes, regulations, and court opinions (case law). Importantly, rules often differ between
139 jurisdictions. Hence, the relevant rule in California might be different than the relevant rule in New
140 York.

141 Third, lawyers apply these rules to the facts at hand (**application**). Application, or the analysis of rule
142 applicability, consists of identifying those facts which are most relevant to the rule, and determining
143 how those facts influence the outcome under the rule. Application can also involve referencing prior
144 cases involving similar rules (i.e. *precedent*), and using the similarities or differences to those cases
145 to determine the outcome of the current dispute.

146 Finally, lawyers reach a conclusion with regards to their application of law to facts, and determine
147 what the legal outcome of those facts are (**conclusion**).

148 We illustrate this framework with a simple example. Suppose that BusinessMart—a large manufactur-
149 ing corporation—is being sued by Amy in federal court on diversity jurisdiction.² BusinessMart
150 sells the majority of its goods in Texas, has its headquarters (where its CEO and board members sit
151 and work) in California, and maintains a factory in Florida. A court is trying to determine—for the
152 purposes of diversity jurisdiction—where BusinessMart’s “principal place of business is.”

- 153 • Issue: Here, a narrow issue is offered—where is BusinessMart’s principal place of business?
- 154 • Rule: A lawyer would recognize that the most relevant rule here comes from the case *Hertz*
155 *Corp. v. Friend*³, in which the Supreme Court determined “that the phrase ‘principal place
156 of business’ refers to the place where the corporation’s high level officers direct, control,
157 and coordinate the corporation’s activities.”
- 158 • Application: Applying this rule to the facts above yields two observations. First, a corpo-
159 ration’s CEO and board members are examples of high level officers referred to in *Hertz*
160 that control and conduct a company. Second, the place where BusinessMart’s high level
161 officers control the company is therefore California, as that is where the CEO and board sit
162 and work.
- 163 • Conclusion: Based on the chain of inference spelled out in the application stage, a lawyer
164 would thus conclude that California is BusinessMart’s principal place of business.

165 The extent to which the outcome of the application and conclusion steps follow each other is dictated
166 by the level of ambiguity in the fact patterns. When the law on a particular question is clear and there
167 is little ambiguity in the facts (as the case in the above example), then the application and conclusion
168 steps point towards the same outcome. Sometimes however, the facts may be unclear or contested,
169 and reasonable minds may differ as the conclusion step. For now, LEGALBENCH focuses entirely on
170 the former setting (unambiguous answers), and all tasks are considered to have objectively “correct”
171 answers.

172 **Other types of reasoning** Though IRAC is the most formal framework for legal reasoning, lawyers
173 recognize a variety of skills which are useful to practice of law [22, 38]. For instance, lawyers are

²Diversity jurisdiction gives federal courts the ability to hear cases between parties that are “citizens” of different states.

³*Hertz Corp. v. Friend*, 559 U.S. 77 (2010).

174 often required to exercises interpretive skills, in order to identify the rights, obligations, or limitations
175 of certain legal language (e.g., what a contractual clause may or may not enable). They must also
176 display rhetorical skills, and understand the types of arguments that are often made. Though these
177 tasks require the knowledge base and skill set of lawyers, they, arguably, do not always fit neatly
178 within the IRAC framework. Hence, we consider these to be distinct from the examples offered in the
179 previous section.

180 3.2 Evaluating legal reasoning in large language models

181 LEGALBENCH identifies six categories of legal reasoning. For each category, we describe how a
182 LLM task may evaluate the typified legal reasoning, using examples from LEGALBENCH.

183 **Issue spotting** LEGALBENCH evaluates issue spotting through tasks in which an LLM must
184 determine if a set of facts raise a particular set of legal questions, implicate an area of the law, or are
185 relevant to a specific party. Issue tasks evaluate a LLM’s ability to reason over the legal implications
186 of different activities, events, and occurrences. An example of an issue spotting task is the `learned_`
187 `hands_benefits` task, which requires an LLM to determine (Yes/No) whether a post on a public
188 legal aid forum raises issues related to welfare law (i.e., public benefits or social services). The box
189 below shows how a LLM might be prompted for this task.

Issue spotting example: `learned_hands_benefits`

Does the post discuss public benefits and social services that people can get from the government, like for food, disability, old age, housing, medical help, unemployment, child care, or other social needs?

Post: “I am currently receiving support from social services, idk why, this is just how my life turned out. They have asked for all of my bank information for the past 12 months. I don’t know what this means. Why would they want that?”

Answer: Yes

190

191 **Rule recall** LEGALBENCH evaluates rule recall through tasks which require the LLM to generate
192 the correct legal rule on an issue in a jurisdiction (e.g., the rule for hearsay in US federal court). A
193 rule task can be an open-ended generation task—in which the LLM must generate the text of the
194 rule for a jurisdiction—or a classification task—in which the LLM must determine whether the rule
195 exists in that jurisdiction. Anchoring to jurisdiction is important, as legal rules differ across different
196 jurisdictions. Rule tasks are particularly useful for measuring *hallucinations* [41]. An example of
197 a rule recall task is `rule_qa`, a question-answer task where questions include asking the model to
198 state the formulations for different legal rules, identify where laws are codified, and general questions
199 about doctrine.

Rule recall example: `rule_qa`

Question: What are the four requirements for class certification under the Federal Rules of Civil Procedure?”

Answer: Numerosity, commonality, typicality, adequacy

200

201 **Conclusion** LEGALBENCH evaluates rule-conclusion through tasks which require an LLM to
202 determine the legal outcome of a set of facts under a specified rule. LLMs are evaluated purely on
203 whether their predicted outcome is correct. For example, the `ucc_v_common_law` task asks a LLM
204 to determine whether a contract is governed by the Uniform Commercial Code (UCC) or the common
205 law of contracts. The LLM is always provided with the relevant rule, via the prompt (see below).

Conclusion example: `ucc_v_common_law`

The UCC (through Article 2) governs the sale of goods, which are defined as moveable tangible things (cars, apples, books, etc.), whereas the common law governs contracts for real estate and services. For the following contracts, determine if they are governed by the UCC or by common law.

Contract: Alice and Bob enter into a contract for Alice to sell her bike to Bob for \$50. Is this contract governed by the UCC or the common law?

Governed by: UCC

206

Incorrect generation	Correct but not specific	Correct and specific
The contract is governed by the common law, because all goods are governed by the common law.	The contract is governed by the UCC, because the UCC governs all goods.	The contract is governed by the UCC, because a bike is a good and all goods are governed by the UCC.

Table 1: An example of how different generations are evaluated for correctness and specificity.

207 **Application** LEGALBENCH evaluates rule-application through the same tasks used to measure rule-
 208 conclusion. When evaluating rule-application however, we prompt the LLM to provide an explanation
 209 of how the rule applies to a set of facts, and evaluate the quality of the generated explanation along
 210 two metrics. First, we evaluate the *correctness* of the generation, by measuring the proportion of
 211 generations where the model does not make a factual misstatement in its generated explanation.
 212 Second, we evaluate the *specificity* of the generation, by measuring the proportion of generations
 213 which cite information provided in the facts. The purpose of measuring both correctness and
 214 specificity is to distinguish between two failure modes common to LLMs: the generation of factually
 215 incorrect statements, and the generation of text which fails to leverage information provided in the
 216 prompt [34, 40]. We developed the second metric after observing that many generations—though
 217 devoid of misstatements—simply repeated the rule in a conclusory manner.

218 Table 1 presents an examples of how three generations (corresponding to the Alice/Bob example
 219 above) would be evaluated under the above metrics. The first generation is incorrect, because it
 220 misstates the rule. The second generation is correct because it contains no falsehoods, but not specific
 221 because it neglects to mention any information from the fact-pattern. The third generation is both
 222 correct and specific, because it contains no falsehoods, and mentions a relevant piece of information
 223 from the prompt (i.e., that a bike is a good).

224 **Interpretation** LEGALBENCH evaluates interpretation through tasks which require the LLM to
 225 parse and understand a legal text. Interpretive tasks provide the LLM with a text, and ask the
 226 LLM to either extract a relevant piece of information, answer a question, or categorize the text
 227 by some property. Interpretive tasks are among the most studied and practically relevant tasks in
 228 LEGALBENCH, and many have been taken from actual use-cases. An example of an interpretive task
 229 is `cquad_audit_right`, which asks the LLM to determine if a contractual clause contains an “audit
 230 right.” An example is shown below:

Interpretation example: `cquad_audit_right`

Does the clause give a party the right to audit the books, records, or physical locations of the counterparty to ensure compliance with the contract?

Clause: “We shall have the right at all times to access the information system and to retrieve, analyze, download and use all software, data and files stored or used on the information system.”

Answer: Yes

231

232 **Rhetorical analysis** LEGALBENCH evaluates rhetorical analysis through tasks which require an
 233 LLM to reason about legal argumentation and analysis. In these tasks, an LLM is provided with a legal
 234 argument (usually excerpted from a judicial opinion), and asked to determine whether it performs a
 235 certain function or has a certain property. An example is the `definition_classification` task,
 236 in which an LLM must determine if a sentence from a judicial opinion provides a definition of a term.

Rhetorical analysis example: `definition_classification`

Does the sentence define a term?

Sentence: “To animadvert carried the broader implication of “turn[ing] the attention officially or judicially, tak[ing] legal cognizance of anything deserving of chastisement or censure; hence, to proceed by way of punishment or censure.” 1 Oxford English Dictionary 474 (2d ed.1989).”

Answer: Yes

237

238 4 LEGALBENCH Tasks

239 Appendix G discusses each task in detail, providing a description of the reasoning that each task
240 evaluates, how task data was constructed, task examples, and evaluation protocols. This section
241 provides an overview of LEGALBENCH.

242 4.1 Construction process

243 **Task sources** LEGALBENCH tasks are drawn from three sources. The first source of tasks are
244 existing available benchmarks. Most of these benchmarks were originally released for non-LLM
245 evaluation settings (e.g., long document extraction [31]). In adapting tasks for LEGALBENCH, we
246 often significantly reformatted data and restructured the prediction objective in order to align with
247 the LLM setting. The second source of tasks are datasets that were previously constructed by legal
248 professionals but never released. This primarily includes datasets hand-coded by legal scholars as part
249 of prior empirical legal projects (e.g., [14]). The last category of tasks are those that were developed
250 specifically for LEGALBENCH.

251 **Collaborative component** In August 2022, we published a call for tasks, describing the goals of the
252 project and its structure [29]. We publicized the project through mailing lists and legal computational
253 conferences. Submitted tasks were vetted for legal correctness and task validity. Task contributors
254 are drawn from diverse professional backgrounds within the law (e.g., academics, practitioners,
255 computational legal researchers) and constitute the authors of this paper.

256 **Infrastructure** LEGALBENCH comes with support designed to enable non-law AI researchers to
257 use and study LEGALBENCH tasks. First, each LEGALBENCH task is accompanied by extensive
258 documentation describing how the task is performed. The objective of this documentation is to
259 provide AI researchers with a working understanding of the mechanical processes behind each task,
260 for the purposes of better understanding LLM performance. Second, each task is accompanied by a
261 “base” prompt, which contains task instructions and demonstrations. The base prompt is provided to
262 promote replicability and standardization. We anticipate that future research efforts building off of
263 LEGALBENCH will identify higher performing prompts/prompt formats. We intended to update the
264 LEGALBENCH repository with these prompts as they are discovered.

265 **Limitations** We note several limitations of the current LEGALBENCH tasks. First, because most
266 LLM context-windows are constrained to a few pages of text, LEGALBENCH does not contain tasks
267 involving long documents. We hope to include such tasks in future work. Second, LEGALBENCH’s
268 tasks focus on legal reasoning questions with objectively correct answers. LEGALBENCH is thus not
269 helpful for evaluating legal reasoning involving degrees of correctness or tasks where “reasonable
270 minds may differ.” Finally, LEGALBENCH only considers English language tasks, is skewed towards
271 certain jurisdictions (American law), and certain areas of the law (contracts).

272 4.2 Tasks

273 **Task structure** All LEGALBENCH tasks contain at least 50 samples, with an average task size of
274 563 samples (Appendix F.5). These tasks are comparable in size to those used in benchmarking efforts
275 like BigBench [58] or HELM [40]. LEGALBENCH tasks also span different formats: multiple-choice
276 questions (35 tasks), open-generation (7 tasks), binary classification (112 tasks), and multiclass
277 classification (8 tasks).

278 **Reasoning types and legal domains** LEGALBENCH provides tasks for each of the reasoning
279 categories discussed above: rule-recall (3 tasks), issue-spotting (16 tasks), rule-application (16 tasks),
280 rule-conclusion (16 tasks), interpretation (119 tasks), and rhetorical analysis (12 tasks). Tasks are
281 predominantly drawn from areas of law implicating civil matters, including contracts (58 tasks),
282 civil procedure (8 tasks), evidence law (1 task), and corporate law (58 tasks). The skew towards
283 interpretation tasks and tasks from contract law can be explained by the ubiquity of legal documents
284 from these areas (e.g., contracts, terms-of-service agreements, disclosures, and etc.) and their
285 immediate commercial implications [31].

286 **Language variation** Legal language is highly heterogenous, varying in sentence structure, vo-
287 cabulary, and rhetorical style across different legal areas and document types [30]. This poses a
288 distinct challenge for LLMs, which are extremely sensitive to small perturbations in input text [40].
289 LEGALBENCH tasks are drawn from a diverse set of legal language types, thus enabling researchers

290 to study performance variation across different categories of legal text. Specifically, LEGALBENCH
291 encompasses tasks with language drawn from plain English (32 tasks), legal opinions (11 tasks),
292 merger agreements (34 tasks), contracts (55 tasks), statutory text (3) tasks, and other sources.

293 5 Results

294 We use LEGALBENCH to perform an empirical evaluation of four different LLMs. First, we illustrate
295 how LEGALBENCH benefits the legal community, by enabling lawyers to precisely identify the types
296 of tasks and reasoning capabilities that existing LLMs are both proficient and deficient in. Second,
297 we discuss how LEGALBENCH benefits the CS community, by enabling researchers to compare the
298 capabilities of different LLMs in fine-grained ways.

299 **LLMs** We study four LLMs: two commercial “large” models (GPT-4 [46] and GPT-3.5 [9]), and
300 two open-source small 7B parameter models (INCITE-Instruct and INCITE-Base). The INCITE
301 models were trained on the RedPajama dataset [62], and considered to be highly performant by open-
302 source standards [4]. INCITE-Instruct is an instruction-tuned variant of INCITE-Base. All LLMs are
303 considered “general domain,” and have not been specialized to law.⁴

304 **Prompts** We designed a prompt for each task, by manually writing instructions for the task,
305 and selecting between zero and eight samples from the available train split to use as in-context
306 demonstration. The number of samples selected depended on the availability of data and the sequence
307 length of samples (Appendix H.1). For application evaluation, we augmented the prompt with an
308 instruction for the LLM to “explain its reasoning step-by-step.” All prompts are made available in
309 supplementary material, and will be published with the full benchmark. We generated predictions by
310 performing next token generation at a temperature of 0.0, until a new-line token was generated. We
311 believe there is significant scope in future work for extended prompt refinement and the incorporation
312 of retrieval methods.

313 **Evaluation** Rule-application tasks were evaluated manually by a law-trained individual, and cor-
314 rectness and specificity were computed according to the description above. We limit our evaluation of
315 rule-application to GPT-3.5 and GPT-4. Extraction tasks were evaluated according to accuracy, and
316 all classification tasks were evaluated using class-balanced accuracy. Appendix F.4 provides more
317 details.

318 5.1 LEGALBENCH for lawyers: on which tasks are LLMs good?

319 First, we illustrate how LEGALBENCH can benefit the legal community, by providing a granular
320 understanding of the regimes and tasks where LLMs perform both well and poorly. We visualize
321 performance on individual tasks as a boxplot in 1. We additionally show performance by reasoning
322 type in Table 2, by averaging the accuracy scores for tasks associated with each reasoning type.

323 There are clear settings where existing LLMs are highly proficient. GPT-4 reaches an accuracy of
324 95%+ on 37 tasks, and even the smaller INCITE-Instruct-7B reaches a respectable (80%+) on 15
325 tasks. For many rule-conclusion tasks—like `personal_jurisdiction` or the Diversity Jurisdiction
326 tasks—GPT-4 appears to be capable of accurately determining the outcome of the legal rule. In
327 particular, LLMs appear proficient on binary-classification tasks involving shorter segments of
328 contractual language.

329 Yet, we also find numerous examples where performance is relatively poor. Overall, there are 61
330 tasks for which GPT-4 performs relatively poorer (80% or less). We observe that all LLMs struggle
331 with rule-recall tasks—consistent with anecdotal reports cataloguing LLMs’ unreliability when asked
332 about legal cases and rules [68]. Additionally, LLM rule-application performance significantly trails
333 rule-conclusion performance—even though both evaluate on the same rule-fact pattern instances.
334 This suggests that even when LLMs can identify the correct outcome for a fact-pattern under a
335 provided legal rule, their explanation of *why* that outcome is reached is often inadequate. Finally, we
336 find that LLM performance significantly degrades for long sequences (Figure 1, R). On interpretation
337 tasks, GPT-4’s average accuracy on short-sequence tasks (defined as those where the average input is
338 less than fifty words) is 87.9%. For interpretation tasks with an average sequence length greater than
339 fifty words, GPT-4’s accuracy degrades to 68.5%.

⁴We note that as of May 2023, there are no public law-specific large language models.

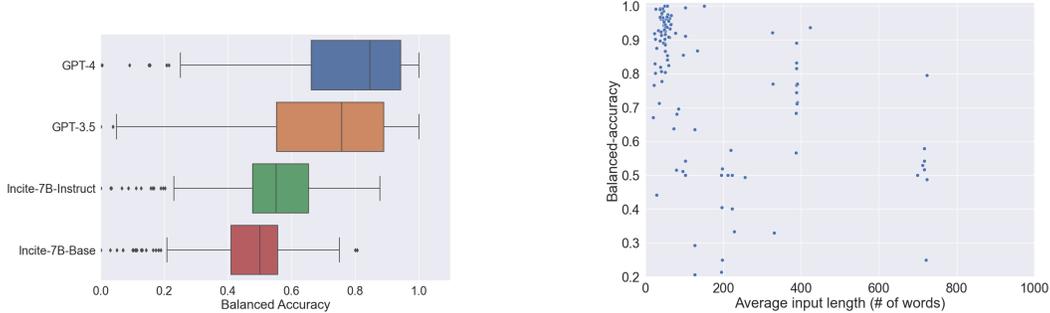

Figure 1: **(L)**: Boxplot with distribution of issue, rule, conclusion, interpretation, and rhetoric scores for different LLMs. **(R)**: Accuracy plotted against averaged input length (in words) for GPT-4 on interpretation tasks.

340 Findings like these are significant to the legal community because they emphasize that assessments
 341 of LLM capabilities for legal applications must be made on a task-by-task basis, and informed by the
 342 nuances of specific tasks. While certain types of tasks appear beyond the scope of current-day LLMs,
 343 others may be readily tackled.

LLM	Issue	Rule	Application	Conclusion	Interpretation	Rhetoric
GPT-4	82.9	59.2	79.9/76.4	92.8	75.2	75.5
GPT-3.5	60.9	46.3	63.1/48.4	80.8	71.4	66.9
INCITE-Instruct-7B	54.9	35.5	-	54.9	53.7	43.6
INCITE-Base-7B	50.1	32.6	-	47.5	45.6	38.1

Table 2: Average performance by reasoning type. For Application we report correctness/specificity.

344 5.2 LEGALBENCH for researchers: what are different LLMs good at?

345 Next, we illustrate how LLM researchers may use LEGALBENCH to perform fine-grained comparisons
 346 of different LLMs. First, LEGALBENCH’s organization of tasks into reasoning categories enables
 347 researchers to compare LLMs in terms of performance differentials across reasoning categories. For
 348 example, Table 2 shows that GPT-4’s advantages over GPT-3.5 are non-uniform across different
 349 reasoning skills. On reasoning skills like issue-spotting and rule-application, GPT-4 improves over
 350 GPT-3.5 by up to 20 points. On interpretation however, GPT-4’s average improvement over GPT-3.5
 351 is less than 4 points. In fact, we count 33 interpretation tasks for which GPT-3.5 *outperforms* GPT-4.
 352 Additionally, we can also observe the impact of instruction-tuning, by comparing Incite-Base-7B
 353 to Incite-Instruct-7B. We find that instruction-tuning appears to positively impact legal reasoning
 354 performance across all reasoning categories, by up to 8 points. Interestingly, these improvements
 355 occur *despite* the fact that the instruction dataset used contains only general-domain instructions.

356 We can also measure differences in LLM abilities by analyzing the distribution of errors on individual
 357 tasks. On several tasks, we observe that the improved performance of one LLM over another is
 358 usually because the former is capable of accurately reasoning through a specific type of fact pattern
 359 that the latter struggled on. For instance, on the hearsay task, GPT-3.5 struggles to recognize hearsay
 360 in fact-patterns where the hearsay statement is non-verbal (e.g., pointing, or a written document),
 361 with an accuracy rate of 28.5%. GPT-4, in contrast, performs much better on this slice of fact patterns,
 362 yielding an accuracy rate of 71.4%. We provide additional examples of this in the Appendix.

363 6 Conclusion

364 Our work here describes LEGALBENCH: a collaboratively constructed benchmark of 162 tasks for
 365 measuring the legal reasoning capabilities of LLMs. In future work, we hope to expand this project,
 366 by continuing to solicit and collect interesting and useful tasks from the legal community.

552 Acknowledgments and Disclosure of Funding

553 Full acknowledgements and disclosures will be included as part of the camera-ready version.

554 A Outline

555 For the sake of clarity, we provide a brief outline of the Appendix.

- 556 • Appendix B provides the checklist required by NeurIPS guidelines.
- 557 • Appendix C provides more information on the availability of LEGALBENCH.
- 558 • Appendix D discusses limitations of the project and potential negative social impacts.
- 559 • Appendix E provides a top-level datasheet.
- 560 • Appendix F provides an overview of the LEGALBENCH tasks, and contains information
561 on licenses, which datasets have been published before, evaluation protocols, and dataset
562 statistics.
- 563 • Appendix G provides a description of each task/task-family. For each set of tasks, we
564 provide background on the relevant legal concepts, describe the tasks, discuss how the task
565 was constructed, provide examples of inputs/outputs, and explain their legal significance.
- 566 • Appendix H provides the full-results for evaluated LLMs on all LEGALBENCH tasks, along
567 with additional information about prompting.

568 B Checklist

- 569 1. For all authors...
 - 570 (a) Do the main claims made in the abstract and introduction accurately reflect the paper’s
571 contributions and scope? [Yes]
 - 572 (b) Did you describe the limitations of your work? [Yes]
 - 573 (c) Did you discuss any potential negative societal impacts of your work? [Yes] See
574 Appendix D.
 - 575 (d) Have you read the ethics review guidelines and ensured that your paper conforms to
576 them? [Yes]
- 577 2. If you are including theoretical results...
 - 578 (a) Did you state the full set of assumptions of all theoretical results? [N/A]
 - 579 (b) Did you include complete proofs of all theoretical results? [N/A]
- 580 3. If you ran experiments (e.g. for benchmarks)...
 - 581 (a) Did you include the code, data, and instructions needed to reproduce the main exper-
582 imental results (either in the supplemental material or as a URL)? [Yes] Benchmark
583 tasks and code to evaluate models is included as part of the supplement, and will be
584 released over Summer 2023.
 - 585 (b) Did you specify all the training details (e.g., data splits, hyperparameters, how they
586 were chosen)? [Yes]
 - 587 (c) Did you report error bars (e.g., with respect to the random seed after running experi-
588 ments multiple times)? [N/A]
 - 589 (d) Did you include the total amount of compute and the type of resources used (e.g., type
590 of GPUs, internal cluster, or cloud provider)? [Yes]
- 591 4. If you are using existing assets (e.g., code, data, models) or curating/releasing new assets...
 - 592 (a) If your work uses existing assets, did you cite the creators? [Yes]
 - 593 (b) Did you mention the license of the assets? [Yes]
 - 594 (c) Did you include any new assets either in the supplemental material or as a URL? [Yes]
595 Included in supplemental material
 - 596 (d) Did you discuss whether and how consent was obtained from people whose data you’re
597 using/curating? [N/A]

- 598 (e) Did you discuss whether the data you are using/curating contains personally identifiable
599 information or offensive content? [Yes]
- 600 5. If you used crowdsourcing or conducted research with human subjects...
- 601 (a) Did you include the full text of instructions given to participants and screenshots, if
602 applicable? [N/A]
- 603 (b) Did you describe any potential participant risks, with links to Institutional Review
604 Board (IRB) approvals, if applicable? [N/A]
- 605 (c) Did you include the estimated hourly wage paid to participants and the total amount
606 spent on participant compensation? [N/A]

607 C Availability

608 We intend to make all code and data available for other researchers to download and use. For now,
609 we provide data as part of the supplementary materials for reviewers to view. Our anticipated public
610 release data is July 15th, 2023.

611 D Limitations and negative social impact

612 **Limitations** We note several limitations of our work. Legal applications—and what constitutes
613 “legal reasoning”—is broad. Thus, LEGALBENCH will necessarily be an incomplete effort, and
614 important tasks/document types/reasoning types are not included. To enumerate a few examples:

- 615 • LEGALBENCH does not include tasks over *long* documents. Long documents are significant
616 for legal practice, as writings like contracts, corporate filings, statutory codes, and judicial
617 opinions can be hundreds of pages long.
- 618 • The legal reasoning dimensions identified in LEGALBENCH constitute a subset of the
619 possible legal reasoning abilities for which we wish to evaluate LLMs. An example of a
620 reasoning ability which is not currently evaluated in LEGALBENCH would be analogical
621 reasoning grounded in case law.
- 622 • LEGALBENCH tasks are skewed towards certain legal domains (e.g., contracts and civil
623 procedure) and others are unrepresented.
- 624 • LEGALBENCH tasks skew towards US Federal law.

625 We hope to work on these limitations as part of future work.

626 **Negative social impact** A potential negative social impact of our work would be if others either
627 (1) construed our work as unequivocally endorsing automation in the legal industry, or (2) used
628 performance on LEGALBENCH as the sole justification for AI deployments. We therefore take efforts
629 to mitigate these impacts, noting the following.

630 As we state in Section 1, the purpose of our work is not to determine whether large language models
631 are capable of replacing legal professionals, the types of legal work that should/can be automated, or
632 the broader implications of new technology on the practice of law. Rather, our focus is on developing
633 technical artifacts which better enable stakeholders and affected parties to answer these questions
634 themselves. Rigorous evaluation is essential to the safe and ethical usage of AI. LEGALBENCH, as
635 a benchmark, is intended to *improve* the ability for stakeholders to conduct evaluations. We finally
636 note that LEGALBENCH, as a tool for research, is not a substitute for more in-depth and context-
637 specific evaluation efforts. The deployment of any AI application in the law must be accompanied by
638 evaluation on in-domain data, and assessments for ethical and legal compliance.

639 E Datasheet

640 We provide a datasheet [28] in compliance with NeurIPS requirements. The datasheet below provides
641 general answers to each of the questions, while Appendix G provides more in-depth details for each
642 individual task. In addition, a number of LEGALBENCH tasks have been adapted from previously
643 released datasets, and the datasheets accompanying their publication provide even more details.

644 **E.1 Motivation**

645 **For what purpose was the data set created? Was there a specific task in mind? If so, please**
646 **specify the result type (e.g. unit) to be expected.**

647 LEGALBENCH was created to evaluate LLMs on legal tasks and better understand their legal reasoning
648 capabilities. Recent advances in language modeling techniques have led to the emergence of “large”
649 language models, and spurred interest within the legal community. This has led to two questions:

- 650 • What technical adaptations are necessary to enable LLMs to perform legal tasks? Legal
651 tasks often involve longer text sequences, jargon, and multi-step reasoning, making them
652 more difficult than traditional NLP tasks.
- 653 • For which legal tasks can current LLMs be trusted to perform safely and reliably?

654 LEGALBENCH encompasses many different tasks. The specification for each task and the expected
655 output can be found in the full task descriptions (Section G).

656 **Who created the dataset (e.g., which team, research group) and on behalf of which entity (e.g.**
657 **company, institution, organization)?**

658 LEGALBENCH consists of novel datasets (which were created by the authors of this paper), and
659 transformed/adapted datasets (which were originally released as part of prior research). In Section G
660 we discuss the origins of each dataset.

661 **Who funded the creation of the dataset? If there is an associated grant, please provide the**
662 **name of the grantor and the grant name and number.**

663 LEGALBENCH and its contributors have been generously funded by a range of entities that include
664 the institutional affiliations provided for each author, governmental grants, and other sources.

665 **Any other comments?**

666 None.

667 **E.2 Composition**

668 **What do the instances that comprise the dataset represent (e.g., documents, photos, people,**
669 **countries)? Are there multiple types of instances (e.g., movies, users, and ratings; people and**
670 **interactions between them; nodes and edges)? Please provide a description.**

671 All LEGALBENCH tasks consist of instances which are text. These include: sentences, paragraphs,
672 and documents. Some instances are drawn from real world sources of text (e.g., actual contracts,
673 corporate disclosures, judicial opinions, or complaints). Other instances were synthetically crafted.
674 Section G provides details for each task.

675 **How many instances are there in total (of each type, if appropriate)?**

676 Section G provides details for each task.

677 **Does the dataset contain all possible instances or is it a sample (not necessarily random) of**
678 **instances from a larger set? If the dataset is a sample, then what is the larger set? Is the**
679 **sample representative of the larger set (e.g., geographic coverage)? If so, please describe how**
680 **this representativeness was validated/verified. If it is not representative of the larger set, please**
681 **describe why not (e.g., to cover a more diverse range of instances, because instances were**
682 **withheld or unavailable).**

683 Nearly every LEGALBENCH task corresponds to a sample of a population, or entirely synthetic
684 data. Section G contains a more detailed description for each dataset. We highlight several broader
685 explanations for the difficulty in acquiring complete or representative data which generalizes across
686 tasks:

- 687 • As prior work on legal benchmarks has noted [30, 53], not all legal documents are published
688 or reported. Hence, many are only accessible through special request, or only available in
689 paper. The lack of easily available representative data is a noted challenge in many justice
690 systems [30, 49].

691 • Acquiring legal annotations is exceedingly expensive. The CUAD project, for instance,
692 estimated that a modestly sized dataset of 500 contracts (relative to the standards of NLP)
693 had an estimated cost of \$2 million US dollars [31]. As a result, it is often possible to only
694 annotate a small sample of data, even when a larger population is available.

695 **What data does each instance consist of? “Raw” data (e.g., unprocessed text or images) or**
696 **features? In either case, please provide a description.**

697 Instances in LEGALBENCH largely correspond to unprocessed text. Section G contains a more
698 detailed description for each dataset.

699 **Is there a label or target associated with each instance? If so, please provide a description.**

700 Yes. Labels correspond to: classes, extracted entities, and open-ended generation. Section G contains
701 a more detailed description of the labels/targets for each dataset.

702 **Is any information missing from individual instances? If so, please provide a description,**
703 **explaining why this information is missing (e.g., because it was unavailable). This does not**
704 **include intentionally removed information, but might include, e.g., redacted text.**

705 For reused/adapted datasets, we refer readers to the original data sheets which document redac-
706 tions/missing data. Newly contributed tasks should not be missing information.

707 **Are relationships between individual instances made explicit (e.g., users’ movie ratings, social**
708 **network links)? If so, please describe how these relationships are made explicit.**

709 Not applicable.

710 **Are there recommended data splits (e.g., training, development/validation, testing)? If so,**
711 **please provide a description of these splits, explaining the rationale behind them.**

712 Yes. Tasks are split into train and test splits. Train splits consist of a small random sample of the
713 original dataset (i.e., between 2-8 instances). We select small training splits in order to capture the
714 true few-shot setting [50], in which a practitioner only has access to a handful of labeled instances.
715 This design choice is also reflected in the structure of the RAFT benchmark [1].

716 **Are there any errors, sources of noise, or redundancies in the dataset? If so, please provide a**
717 **description.**

718 A significant amount of legal data is the product of scanning and OCR. Hence, this data often contains
719 artifacts of these processes, which appear as errant or missing characters.

720 **Is the dataset self-contained, or does it link to or otherwise rely on external resources (e.g.,**
721 **websites, tweets, other datasets)? If it links to or relies on external resources, a) are there**
722 **guarantees that they will exist, and remain constant, over time; b) are there official archival**
723 **versions of the complete dataset (i.e., including the external resources as they existed at the**
724 **time the dataset was created); c) are there any restrictions (e.g., licenses, fees) associated with**
725 **any of the external resources that might apply to a future user? Please provide descriptions**
726 **of all external resources and any restrictions associated with them, as well as links or other**
727 **access points, as appropriate.**

728 LEGALBENCH is self-contained.

729 **Does the dataset contain data that might be considered confidential (e.g., data that is protected**
730 **by legal privilege or by doctor–patient confidentiality, data that includes the content of indi-**
731 **viduals’ non-public communications)? If so, please provide a description.**

732 No. All LEGALBENCH data is derived from public sources or was generated by authors. There is no
733 confidential information in our dataset.

734 **Does the dataset contain data that, if viewed directly, might be offensive, insulting, threatening,**
735 **or might otherwise cause anxiety? If so, please describe why.**

736 No.

737 **Does the dataset relate to people? If not, you may skip the remaining questions in this section.**

738 LEGALBENCH data relates to people to the extent that LEGALBENCH contains tasks which contain
739 language drawn from judicial cases involving individuals, or posts by individuals to legal forums (i.e.,
740 the Learned Hands Tasks).

741 **Does the dataset identify any subpopulations (e.g., by age, gender)? If so, please describe how**
742 **these subpopulations are identified and provide a description of their respective distributions**
743 **within the dataset.**

744 No.

745 **Is it possible to identify individuals (i.e., one or more natural persons), either directly or indi-**
746 **rectly (i.e., in combination with other data) from the dataset? If so, please describe how.**

747 As LEGALBENCH is drawn entirely from public datasets—which themselves may contain additional
748 information—it is possible to identify the original documents that LEGALBENCH data was drawn
749 from.

750 **Does the dataset contain data that might be considered sensitive in any way (e.g., data that re-**
751 **veals racial or ethnic origins, sexual orientations, religious beliefs, political opinions or union**
752 **memberships, or locations; financial or health data; biometric or genetic data; forms of govern-**
753 **ment identification, such as social security numbers; criminal history)? If so, please provide a**
754 **description.**

755 The Learned Hands tasks correspond to posts on public forums. In these posts individuals discuss legal
756 questions, and sometimes disclose information that would meet the above definition of “sensitive.”

757 **Any other comments?**

758 We note that the data distributions from which some LEGALBENCH tasks were drawn—like judi-
759 cial cases or legal forums—have been used by prior work published in the NeurIPS Datasets and
760 Benchmarks Track [30, 53]. These works offer additional information.

761 E.3 Collection Process

762 **How was the data associated with each instance acquired? Was the data directly observable**
763 **(e.g., raw text, movie ratings), reported by subjects (e.g., survey responses), or indirectly in-**
764 **ferred/derived from other data (e.g., part-of-speech tags, model-based guesses for age or lan-**
765 **guage)? If data was reported by subjects or indirectly inferred/derived from other data, was**
766 **the data validated/verified? If so, please describe how.**

767 Data underlying LEGALBENCH tasks were collected using different processes, and Section G contains
768 a detailed discussion for each task.

769 **What mechanisms or procedures were used to collect the data (e.g., hardware apparatus or sen-**
770 **sor, manual human curation, software program, software API)? How were these mechanisms**
771 **or procedures validated?**

772 Please refer to Section G for background on each task.

773 **If the dataset is a sample from a larger set, what was the sampling strategy (e.g., deterministic,**
774 **probabilistic with specific sampling probabilities)?**

775 Please see the discussion in the Composition section above.

776 **Who was involved in the data collection process (e.g., students, crowdworkers, contractors)**
777 **and how were they compensated (e.g., how much were crowdworkers paid)?**

778 Section G contains a detailed discussion for each task.

779 **Over what timeframe was the data collected? Does this timeframe match the creation time-**
780 **frame of the data associated with the instances (e.g., recent crawl of old news articles)? If not,**
781 **please describe the timeframe in which the data associated with the instances was created.**

782 Section G contains a detailed discussion for each task.

783 **Were any ethical review processes conducted (e.g., by an institutional review board)? If so,**
784 **please provide a description of these review processes, including the outcomes, as well as a link**
785 **or other access point to any supporting documentation.**

786 Where applicable, Section G provides information relevant to each task.

787 **Does the dataset relate to people? If not, you may skip the remaining questions in this section.**

788 The dataset relates to people insofar as it draws text from documents which relate to people, or people
789 created.

790 **Did you collect the data from the individuals in question directly, or obtain it via third parties
791 or other sources (e.g., websites)?**

792 Section G contains a detailed discussion for each task.

793 **Were the individuals in question notified about the data collection? If so, please describe (or
794 show with screenshots or other information) how notice was provided, and provide a link or
795 other access point to, or otherwise reproduce, the exact language of the notification itself.**

796 No. Following other works which incorporate data from public judicial sources [30, 53], we note that
797 judicial filings are public, and the individuals implicated in those proceedings are aware of the public
798 nature.

799 **Did the individuals in question consent to the collection and use of their data? If so, please
800 describe (or show with screenshots or other information) how consent was requested and pro-
801 vided, and provide a link or other access point to, or otherwise reproduce, the exact language
802 to which the individuals consented.**

803 Individuals whose names and circumstances appear in the original datasets did not separately consent
804 to be a part of LEGALBENCH. Again, we note that these documents are generally public, and already
805 accessible to a wide range of parties, through many different judicial data services.

806 **If consent was obtained, were the consenting individuals provided with a mechanism to revoke
807 their consent in the future or for certain uses? If so, please provide a description, as well as a
808 link or other access point to the mechanism (if appropriate).**

809 N/A.

810 **Has an analysis of the potential impact of the dataset and its use on data subjects (e.g., a
811 data protection impact analysis) been conducted? If so, please provide a description of this
812 analysis, including the outcomes, as well as a link or other access point to any supporting
813 documentation.**

814 No.

815 **Any other comments?**

816 None.

817 **E.4 Preprocessing, Cleaning, Labeling**

818 **Was any preprocessing/cleaning/labeling of the data done (e.g., discretization or bucketing,
819 tokenization, part-of-speech tagging, SIFT feature extraction, removal of instances, processing
820 of missing values)? If so, please provide a description. If not, you may skip the remainder of
821 the questions in this section.**

822 No.

823 **E.5 Use**

824 **Has the dataset been used for any tasks already? If so, please provide a description.**

825 We have used the constructed datasets to evaluate several LLMs.

826 **Is there a repository that links to any or all papers or systems that use the dataset? If so, please
827 provide a link or other access point.**

828 We intend to create a repository as part of the LEGALBENCH website.

829 **What (other) tasks could the dataset be used for?**

830 We envision this dataset could be used for the following:

- 831 • Evaluation of LLMs.
832 • Finetuning LLMs, either on task data directly, or self-instruct style generations derived from
833 task data.

834 **Is there anything about the composition of the dataset or the way it was collected and prepro-**
835 **cessed/cleaned/labeled that might impact future uses? For example, is there anything that a**
836 **future user might need to know to avoid uses that could result in unfair treatment of individ-**
837 **uals or groups (e.g., stereotyping, quality of service issues) or other undesirable harms (e.g.,**
838 **financial harms, legal risks) If so, please provide a description. Is there anything a future user**
839 **could do to mitigate these undesirable harms?**

840 We emphasize that LEGALBENCH—like all generalized benchmarks—can offer only a preliminary
841 understanding of LLM performance. LEGALBENCH tasks do not generalize to all legal reasoning
842 tasks or all types of legal documents. We thus emphasize that practitioners seeking to deploy LLMs
843 within their own applications should perform their own data collection and validation specific to their
844 use case.

845 **Are there tasks for which the dataset should not be used? If so, please provide a description.**

846 These datasets should not be used to predict the legality of real world events, the outcome of lawsuits,
847 or as legal advice.

848 **E.6 Distribution**

849 **Will the dataset be distributed under a copyright or other intellectual property (IP) license,**
850 **and/or under applicable terms of use (ToU)? If so, please describe this license and/or ToU, and**
851 **provide a link or other access point to, or otherwise reproduce, any relevant licensing terms or**
852 **ToU, as well as any fees associated with these restrictions.**

853 Table 3 provides the license that applies to each individual LEGALBENCH task.

854 **Have any third parties imposed IP-based or other restrictions on the data associated with the**
855 **instances? If so, please describe these restrictions, and provide a link or other access point to,**
856 **or otherwise reproduce, any relevant licensing terms, as well as any fees associated with these**
857 **restrictions.**

858 Yes. Tasks which consist of adapted/transformed data are released under the same license as the
859 original dataset. Table 3 provides these licenses, and Section G provides a reference to the original
860 dataset for transformed tasks.

861 **Do any export controls or other regulatory restrictions apply to the dataset or to individual**
862 **instances? If so, please describe these restrictions, and provide a link or other access point to,**
863 **or otherwise reproduce, any supporting documentation.**

864 No.

865 **E.7 Maintenance**

866 **Who will be supporting/hosting/maintaining the dataset?**

867 Neel Guha will be supporting this dataset.

868 **How can the owner/curator/manager of the dataset be contacted (e.g., email address)?**

869 Neel Guha can be reached at nguha@cs.stanford.edu. He will be available to answer any questions.

870 **Is there an erratum? If so, please provide a link or other access point.**

871 We have currently not found any, but will make them available on the website.

872 **Will the dataset be updated (e.g., to correct labeling errors, add new instances, delete in-**
873 **stances)? If so, please describe how often, by whom, and how updates will be communicated**
874 **to users (e.g., mailing list, GitHub)?**

875 Yes. There will be two types of updates to LEGALBENCH:

- 876 • First, we will update LEGALBENCH to reflect new contributions from the legal community.

877

- Second, we will update LEGALBENCH to reflect identified errors in the data.

878

We will strive to make and publicize updates as soon as errors are identified and new tasks are contributed. Neel Guha will be in charge of managing these updates.

879

880

If the dataset relates to people, are there applicable limits on the retention of the data associated with the instances (e.g., were individuals in question told that their data would be retained for a fixed period of time and then deleted)? If so, please describe these limits and explain how they will be enforced.

881

882

883

884

N/A.

885

Will older versions of the dataset continue to be supported/hosted/maintained? If so, please describe how. If not, please describe how its obsolescence will be communicated to users.

886

887

Yes. We will make older versions available on request by email.

888

If others want to extend/augment/build on/contribute to the dataset, is there a mechanism for them to do so? If so, please provide a description. Will these contributions be validated/verified? If so, please describe how. If not, why not? Is there a process for communicating/distributing these contributions to other users? If so, please provide a description.

889

890

891

892

Yes. We encourage members of the legal community to contribute new tasks. We are in the process of formalizing procedures for reviewing, validating, and incorporating submissions.

893

894

We additionally note that many of the LEGALBENCH tasks are available under permissive licenses, and other researchers may thus modify them.

895

896 **F Task overview**

897 **F.1 Licenses**

898 LEGALBENCH tasks are subject to different licenses, due to the choices of dataset contributors, or
899 the license under which the original data was released. Table 3 summarizes the licenses.

License	Tasks
Creative Commons Attribution 4.0	Abercrombie, CUAD Tasks, Citation Prediction Tasks, Contract NLI Tasks, Contract QA, Corporate Lobbying, Diversity Tasks, Function of Decision Section, Hearsay, Insurance Policy Interpretation, International Citizenship Questions, J.Crew Blocker, Legal Reasoning Causality, MAUD Tasks, Oral Argument Question Purpose, Overruling, Personal Jurisdiction, Private Right of Action, Rule QA, SCALR, Securities Complaint Extraction Tasks, Successor Liability, Supply Chain Disclosure Tasks, Telemarketing Sales Rule, UCC v. Common Law, Unfair Terms of Service
Attribution-NonCommercial 4.0 International	Canada Tax Court Outcomes, Consumer Contracts QA, Textualism Tools
Attribution-ShareAlike 4.0 International	Definition Tasks
Attribution-NonCommercial-ShareAlike 4.0 International	Learned Hands Tasks
MIT	New York State Judicial Ethics, Privacy Policy QA, SARA Tasks
Creative Commons Attribution-NonCommercial License	OPP-115 Tasks
Attribution-NonCommercial 3.0 Unported	Privacy Policy Entailment

Table 3: Licenses

900 **F.2 Public availability status**

901 Given that many commercially available LLMs are trained on the “entirety of the web”—and little
902 is known as to how they are trained—there are concerns that many benchmarks have inadvertently
903 become part of the training data for these models. Therefore, this section identifies and organizes
904 LEGALBENCH tasks into three categories:

- 905 • Previously published tasks, which were derived from datasets that were initially published
906 as part of other works and available on the web for download.
- 907 • Original but available tasks, which are original creations of the LEGALBENCH project but
908 previously made available online.
- 909 • Original and unavailable tasks, which are original creations of the LEGALBENCH project
910 but have not been released online.

911 Table 4 summarizes the availability status of each of the tasks.

912 **F.3 Reasoning type**

913 Table 5 organizes tasks by the LEGALBENCH reasoning type they can be used to assess.

Publication status	Tasks
Previously published tasks	CUAD Tasks, Contract NLI Tasks, MAUD Tasks, OPP-115 Tasks, Overruling, Privacy Policy Entailment, Privacy Policy QA, SARA Tasks, Unfair Terms of Service
Original but available tasks	Abercrombie, Diversity Tasks, Hearsay, International Citizenship Questions, Learned Hands Tasks, New York State Judicial Ethics, Personal Jurisdiction, Private Right of Action, Rule QA
Original and unavailable tasks	Canada Tax Court Outcomes, Citation Prediction Tasks, Consumer Contracts QA, Contract QA, Corporate Lobbying, Definition Tasks, Function of Decision Section, Insurance Policy Interpretation, J.Crew Blocker, Legal Reasoning Causality, Oral Argument Question Purpose, SCALR, Securities Complaint Extraction Tasks, Successor Liability, Supply Chain Disclosure Tasks, Telemarketing Sales Rule, Textualism Tools, UCC v. Common Law

Table 4: Task publication status

Reasoning type	Tasks
Issue-spotting	Corporate Lobbying, Learned Hands Tasks
Rule-recall	International Citizenship Questions, New York State Judicial Ethics, Rule QA
Rule-application	Abercrombie, Diversity Tasks, Hearsay, Personal Jurisdiction, Successor Liability, Telemarketing Sales Rule, UCC v. Common Law
Rule-conclusion	Abercrombie, Diversity Tasks, Hearsay, Personal Jurisdiction, Successor Liability, Telemarketing Sales Rule, UCC v. Common Law
Interpretation	CUAD Tasks, Consumer Contracts QA, Contract NLI Tasks, Contract QA, Insurance Policy Interpretation, J.Crew Blocker, MAUD Tasks, OPP-115 Tasks, Privacy Policy Entailment, Privacy Policy QA, Private Right of Action, SARA Tasks, Securities Complaint Extraction Tasks, Supply Chain Disclosure Tasks, Unfair Terms of Service
Rhetorical analysis	Canada Tax Court Outcomes, Citation Prediction Tasks, Definition Tasks, Function of Decision Section, Legal Reasoning Causality, Oral Argument Question Purpose, Overruling, SCALR, Textualism Tools

Table 5: Tasks by reasoning type

914 **F.4 Task evaluation**

915 **Rule-application** To evaluate rule-application, a law-trained expert manually examined each generation. For each generation, the expert classified (1) if the generation was correct, and if so, (2)
916 whether the generation was specific.
917

918 A generation is correct if it contains no incorrect statements. In evaluation, we found that the most
 919 common example of incorrect generations were those that either (1) misstated the rule that was being
 920 applied. For example, the generation’s restatement of the rule would negate the original rule, alter a
 921 conjunction into a disjunction, or leave a part of the rule out. The second most common example
 922 were generations that contained an analytical error. For example, the generation might incorrectly
 923 add two numbers, or state that two individuals were from the same state (when in fact they were not).

924 A generation is specific if it correctly incorporates information from the fact pattern. For lawyers,
 925 the quality of an explanation for how a legal rule applies to set of facts is measured partially by the
 926 extent to which the explanation relies on information contained in those facts. For example, merely
 927 saying a piece of evidence is hearsay is insufficient: an explanation must reference the qualities of
 928 the evidence which make it hearsay. We introduced this measurement after realizing that LLMs often
 929 generate explanations which—though correct—largely restate the rule being applied, without any
 930 reference to the underlying facts.

931 **Generation tasks** LEGALBENCH contains one open-ended generation task—Rule QA. This
 932 question-answering task was evaluated for correctness by hand, by a law-trained expert.

933 **Classification tasks** We evaluate all classification tasks in LEGALBENCH using class-balanced
 934 accuracy. We do this because a number of LEGALBENCH tasks are class-imbalanced.

935 **F.5 Task statistics**

936 Table 56 provides statistics for the LEGALBENCH tasks. For each task, we list the number of samples
 937 and the average length (in words) of each input.

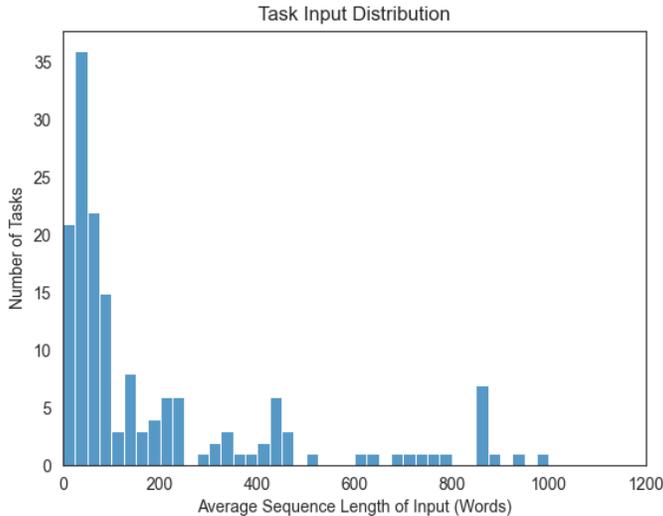

Figure 2: LEGALBENCH task sizes and input text lengths.

Size range (samples)	Number of tasks
50-100	28
100-500	97
500-2000	29
2000+	8

Table 6: Number of LEGALBENCH tasks at different dataset sizes.

938 **Input length** Broadly, LEGALBENCH encompasses tasks ranging from short (a single sentence) to
 939 longer inputs (two pages of text) (Figure 2).

940 **Task size** The average LEGALBENCH task contains between 500-600 instances. All tasks consist
 941 of at least 50 instances. A more detailed breakdown is available in Table 6.

Table 7: Task Statistics

Task	Number of Samples	Mean Sample Length (Words)
abercrombie	100	7.1
canada_tax_court_outcomes	250	99.2
citation_prediction_classification	110	35.9
citation_prediction_open	55	32.4
consumer_contracts_qa	400	486.8
contract_nli_confidentiality_of_agreement	90	73.9
contract_nli_explicit_identification	117	75.7
contract_nli_inclusion_of_verbally_conveyed_information	147	78.1
contract_nli_limited_use	216	63.8

942 **G Task Descriptions**

943 This section provides a detailed description for each family of tasks.

944 **G.1 Abercrombie**

945 In LEGALBENCH, the Abercrombie task is denoted as `abercrombie`.

946 **Background** A particular mark (e.g., a name for a product or service) is only eligible for trademark
947 protection if it is considered to be distinctive. In assessing whether a mark is distinctive, lawyers and
948 judges follow the framework set out in the case *Abercrombie & Fitch Co. v. Hunting World, Inc.*,⁵
949 which enumerates five categories of distinctiveness. These categories characterize the relationship
950 between the dictionary definition of the term used in the mark, and the service or product it is being
951 attached to. They are:

- 952 • **Generic:** A name is generic with respect to a product or service if it connotes the basic nature
953 of the product/service, rather than more individualized characteristics of the product. For
954 example, the mark “Salt” for packaged sodium chloride would be generic under Abercrombie
955 because “salt” is the common name for sodium chloride.
- 956 • **Descriptive:** A name is descriptive if it identifies a characteristic or quality of an article or
957 service, such as color, odor, function, dimensions, or ingredients. For example, the name
958 “Sharp” for a television would be descriptive, because it describes a plausible characteristic
959 of television (i.e., their sharp image quality).
- 960 • **Suggestive:** A name is suggestive if it suggests, rather than describes, some particular
961 characteristic of the goods or services to which it applies. An essential aspect of suggestive
962 names is that it requires the consumer to exercise the imagination in order to draw a
963 conclusion as to the nature of the goods and services. For example, the name “Greyhound”
964 would be suggestive for a bus service, because greyhounds are considered to be fast, and
965 “fast” is an adjective that could be used to describe a bus service.
- 966 • **Arbitrary:** A name is arbitrary if it is a “real” word but seemingly “arbitrary” with respect to
967 the product or service. For example, the mark “Apple” for a software company is arbitrary,
968 because apples are unrelated to software.
- 969 • **Fanciful:** A name is fanciful if it is entirely made up, and not found in the English dictionary.
970 For example, “Lanmbe” is a fanciful mark, because it is a made-up word.

971 The Abercrombie spectrum is commonly taught as part of Intellectual Property courses in law school,
972 and students are expected to understand how to determine the Abercrombie classification for a
973 particular product/mark combination.

974 Performing the Abercrombie task requires reasoning about the literal meaning of a word and the
975 degree of its connection to a particular product/service. It requires having some understanding of the
976 types of words that could plausibly be used to describe a particular good/service, and the extent to
977 which those words relate to a particular mark. It also requires reasoning as to whether a particular
978 word is a real English word.

979 **Task** The Abercrombie task requires an LLM to determine—given a candidate mark and a description
980 of a product/service—which of the five Abercrombie categories above apply.

Facts	Abercrombie Classification
The mark "Whirlpool" for an oven.	arbitrary
The mark "Compact" for wallets.	descriptive
The mark "Imprion" for a line of sports drinks.	fanciful
The mark "Car" for a line of automobiles.	generic
The mark "Quick Green" for grass seed.	suggestive

Table 8: Examples for `abercrombie`

⁵*Abercrombie & Fitch Co. v. Hunting World*, 537 F.2d 4 (2nd Cir. 1976)

981 **Construction process** We manually create a dataset to evaluate a model’s ability to classify a
982 mark’s distinctiveness (into one of the above 5 categories) with respect to a product. In writing
983 samples, we draw inspiration from similar exercises available in legal textbooks and practice study
984 guides. Hence, the samples provided have a definite answer, and are not subject to ambiguity. There
985 is an expectation that a law student learning intellectual property would be able to answer these
986 questions to a high degree of accuracy.

987 We create approximately 20 samples for each category of distinctiveness, and randomly select a
988 single sample from each category to constitute the train set. The remaining 19 samples (for each
989 category) are assigned to the test set (for a total of 95 samples).

Class	Number of samples
generic	19
descriptive	19
suggestive	20
arbitrary	18
fanciful	19

Table 9: Test set class distribution

990 **Significance and value** Given how easy this task is for lawyers with a basic training in intellectual
991 property law, it is unlikely that LLMs will be called on to perform this task in the actual practice of
992 law, or that the ability for LLMs to perform this task would alter the way in which lawyers approach
993 IP practice. Instead, the Abercrombie task is significant as a measurement of reasoning ability.
994 Because it is “simplistic” by the standards of human lawyers, it provides a useful objective measure
995 of reasoning progress for LLMs.

996 **G.2 Canada Tax Court Outcomes**

997 In LEGALBENCH, the Canada Tax Court Outcomes task is also denoted as `canada_tax_court_`
998 `outcomes`.

999 **Background** The Tax Court of Canada hears appeals of government decisions related to taxation.⁶
1000 The Court’s decisions, which are written in natural language, are published on the Court’s website,
1001 in both French and English.⁷ Decisions typically include a section at the beginning summarizing
1002 the outcome of the appeal, followed by sections describing the factual background and various
1003 procedural steps, a section identifying the issues under consideration, sections with legal analysis,
1004 and a concluding section. While this is the standard format, judges are free to use other formats if
1005 they prefer. Decision length varies depending on the complexity of the litigation, with some decisions
1006 being only a few hundred words, and others being many thousands of words.

1007 Appeals in Tax Court of Canada cases are brought by individuals or organizations who ask the Court
1008 to overturn a government taxation decision. Outcomes of appeals are generally binary: appeals
1009 are either granted, in which case the government taxation decision is overturned in whole or in
1010 part, or appeals are denied in which case the government taxation decision is upheld. Occasionally
1011 published decisions will not involve the outcome of an appeal, including where the decision is about
1012 a procedural step (e.g. the admissibility of particular evidence).

1013 The `canada_tax_court_outcomes` task involves identifying whether an excerpt from a Tax Court of
1014 Canada decision includes the outcome of the appeal and, if so, what the outcome is. While the task is
1015 straightforward, one challenge is that the model must distinguish between outcomes of the appeal
1016 as a whole and outcomes of particular aspects of the appeal. Another challenge is that where the
1017 excerpt does not include the outcome, the model must avoid predicting the outcome – even if the
1018 model might plausibly correctly infer the likely outcome from the excerpt provided.

1019 **Task** The Canada Tax Court Outcomes task requires an LLM to classify whether an excerpt from
1020 a given decision includes the outcome of the appeal, and if so whether the appeal was allowed or
1021 dismissed. Some excerpts do not include an outcome of the appeal, in which case the model should
1022 return ‘other’. Where the excerpt includes the outcome and the appeal is allowed in whole or in
1023 part, the model should return ‘allowed’. Where the excerpt includes an outcome, and the appeal is
1024 dismissed the model should return ‘dismissed’. The model should disregard outcomes that are not
1025 about the ultimate outcome of the appeal, such as costs awards (i.e. orders requiring a party to pay
1026 the other party’s legal costs).

1027 **Construction process** We obtained the full text of English-language versions of decisions from
1028 2001 to 2022 by scraping the Tax Court of Canada website.⁸ We then cleaned and parsed the text
1029 to extract excerpts that are most likely to contain the outcome of the appeal. For example, many
1030 decisions contain a brief introductory section describing the outcome of the appeal using a specific
1031 header, and if the decision contained a section with such a header, we excerpted only that section.
1032 Where our parsing code could not identify such a section, we excerpted the first and last 2,500
1033 characters, because outcomes are generally described at either the beginning or end of decisions.
1034 After initially attempting outcome classification on these excerpts using OpenAI’s ChatGPT, we
1035 selected a quasi-random sample of 250 excerpts (quasi random because we selected these manually,
1036 we over- sampled excerpts where the outcome is ‘other’, and we chose some excerpts that were
1037 challenging due to factors such as length or unusual format). We manually reviewed outcomes for
1038 these excerpts, correcting some that had been miscategorized.

1039 Two random cases from each class are selected for the training split, while the remainder are used as
1040 the test set.

1041 **Significance and value** Legal scholars frequently gather data about outcomes in large numbers
1042 of legal decisions in order to examine patterns in judicial decision-making. For example, a legal
1043 scholar may be interested in comparing outcomes in similar processes across jurisdictions or they

⁶*Tax Court of Canada Act*, RSC, 1985, c T-2, online: <https://laws-lois.justice.gc.ca/eng/acts/t-2/index.html>, s 12.

⁷Tax Court of Canada, “Find a Decision”, online: <https://decision.tcc-cci.gc.ca/tcc-cci/en/nav.do>.

⁸Ibid. As per the terms of service of the website, we are required to note that the text of the scraped decisions are not the official versions (official versions can be obtained from the website), and that the reproduction of these cases has not been produced in affiliation with or with the endorsement of the Government of Canada.

Excerpt	Outcome
The appeal is allowed in part and the assessment is referred back to the Minister of National Revenue for reconsideration and reassessment to reflect a 25% reduction of the tax owed by the appellant and adjustments to the interest and penalties, as agreed to by the respondent. Costs are to be determined after hearing both parties. In all other respects, the assessment is confirmed. Signed this 23rd day of February 2012. "Franois Angers" Angers J.	allowed
IN ACCORDANCE with the Reasons for Judgment attached, the appeal from the decision of the Respondent in relation to the income of the Appellant for the purposes of determining his entitlement to the Guaranteed Income Supplement under the Old Age Security Act for the payment period from July 1, 2014 to June 30, 2015 is dismissed, without costs. Signed at Ottawa, Canada, this 24th day of October 2017. R.S. Boccock Boccock J.	dismissed
(These Reasons for Judgment are issued in substitution for the Reasons for Judgment signed on January 22, 2002) Lamarre, J. [1] These are appeals under the informal procedure against assessments made by the Minister of National Revenue ("Minister") under the Income Tax Act ("Act") for the 1995, 1996, 1997, 1998 and 1999 taxation years. [2] In filing her 1995 income tax return, the appellant claimed a business investment loss of \$268,897 with respect to investments in eight mortgages held "in trust" for the appellant and her father Henry Sokolowski by Kiminco Acceptance Co. Ltd. ("Kiminco"), a member of the Glen Coulter group of companies. The eight mortgage investments were made in 1987 and 1988 and are identified as follows in paragraph 13 of the Reply to the Notice of Appeal: Account/Mortgage Number Ultimate Borrower ... For the Appellant: Name: Firm: For the Respondent: Morris Rosenberg Deputy Attorney General of Canada Ottawa, Canada	other

Table 10: Examples for Canada Tax Court Outcomes

Outcome	Number of samples
allowed	101
dismissed	131
other	12

Table 11: Test set class distribution

1044 might examine whether a legislative change resulted in different outcomes over time. Lawyers and
1045 legal information technology companies may also be interested in gathering data on outcomes for the
1046 purposes of judicial analytics or to predict future outcomes.

1047 Gathering such data is typically straightforward. It is, for example, a common task assigned to first
1048 year law student research assistants who can frequently achieve close to 100% accuracy on such
1049 tasks with only minimal training. However, because the data is often useful only when gathered on
1050 large numbers of decisions, this type of data gathering using human research assistants can be cost
1051 prohibitive. If LLMs can obtain high accuracy on these tasks, substantial savings could be achieved –
1052 which would increase the ability of researchers to pursue new projects.

1053 G.3 Citation Prediction Tasks

1054 In the LEGALBENCH, the Citation Prediction tasks are also denoted as `citation_prediction_*`.

1055 **Background** The importance of locating relevant legal materials, or “law search” has long been
1056 recognized as an essential aspect of legal practice. This process involves uncovering case law, statutes,
1057 and other materials pertinent to legal questions or arguments. As a fundamental aspect of legal
1058 reasoning, law search plays a crucial role in bridging the gap between the initial translation of
1059 behaviors into legal questions and the subsequent interpretation and application of the relevant law.

1060 Legal professionals are often valued for their ability to find and apply the appropriate law to their
1061 clients’ situations. Given the intricate nature of the contemporary legal domain, the process of law
1062 search has evolved into a complex and nuanced task that demands a comprehensive understanding of
1063 the law.

1064 A core component of law search is legal relevance. From a sociological perspective, the relevance of
1065 legal documents to a specific legal question is a social fact. This fact is determined by the judgments
1066 made by members of the legal community, who must determine which legal materials are applicable
1067 to a given question. Relevance relates legal questions to sources of legal authority.

1068 In functional legal communities, law search leads to some degree of convergence over legal materials.
1069 Convergence occurs when competent members of a legal community, faced with the same legal
1070 question, identify the same sources of relevant legal authority. This process is essential to ensuring
1071 that the legal system operates consistently, predictably, and coherently.

1072 As a critical process that connects the translation of behaviors into legal questions and the subsequent
1073 interpretation and application of the relevant law, law search is indispensable to legal reasoning.

1074 The Citation Prediction task requires reasoning concerning the relationship between the text of
1075 judicial opinions and legal propositions. Successful prediction would entail encoding a notion of
1076 legal relevance and would allow a system to determine whether a legal proposition was or was not
1077 supported by the extant body of law.

1078 **Task** The citation task is based on a version of the evaluation approaches used in [18]. There are
1079 two Citation Prediction tasks. The first (`citation_prediction_classification`) requires an
1080 LLM to predict whether a given sentence (i.e. legal proposition) is or is not supported by a given
1081 case. The second (`citation_prediction_open`) requires an LLM to predict a case (by name) that
1082 supports a provided sentence.

1083 **Construction process** We collected a sample of circuit court opinions published after January 1,
1084 2023. To the best of our knowledge, most existing LLMs haven’t been trained on any data generated
1085 in 2023. For each opinion, we manually collected sentences which were supported by a citation to a
1086 judicial opinion, where (1) the sentence contained some quotation from the original case, and (2) the
1087 sentence was supported by a single cite. We chose sentences which included quotation fragments
1088 and were only supported by a single cite to avoid sentences which could be supported by a broad set
1089 of cases. When a sentence is supported by a much larger universe of cases, verifying that an LLM
1090 answer is incorrect is difficult. We also recorded the circuit for each opinion that we pulled language
1091 from. As a result, we can include the circuit information in the prompt, since circuits prefer citing
1092 their previous decisions. We collected 55 sentences using this process. For the citation generation
1093 task (`citation_prediction_open`), we ask the LLM to predict the citation given the sentence.

1094 The `citation_prediction_classification` task is then constructed as follows. We use each
1095 sentence-citation pair to create two task samples. The first sample corresponds to the sentence and
1096 the correct citation (positive label). The second sample corresponds to the sentence and a randomly
1097 selected citation from the remainder of the data (negative label). This generates a dataset of 110
1098 sentence-citation pairs, two of which are assigned to the training split.

1099 **Significance and value** Law search is a core function of legal thinking. In addition, the difficulty of
1100 identifying relevant law is a core barrier in the public’s ability usefully access the law. The ability of
1101 an LLM to accurately engage in citation prediction would have important practical value in providing
1102 access to law, and would also allow the LLM to more reliably support legal statements with relevant
1103 authority.

Input	Citation	Supported?

1104 G.4 Clause Classification Tasks

1105 LEGALBENCH includes a number of tasks in which the LLM must determine the “type” or “category”
1106 of a provision/clause in a legal document. Specifically:

- 1107 • The Contract QA task (Section G.4.4), in which the LLM is provided with the name of a
1108 common type of contractual clause and a clause, and must determine if the clause is an
1109 example of the example type.
- 1110 • 38 tasks derived from the CUAD dataset (Section G.4.1), where each task is a binary-
1111 classification task requiring the LLM to identify whether a clause (from an EDGAR contract)
1112 belongs to a certain category (e.g., Audity Rights clauses) [31].
- 1113 • The J.Crew blocker task (Section G.4.2), in which the LLM must classify whether a clause
1114 (from a loan agreement) is a J-Crew blocker provision.
- 1115 • The Unfair Terms of Service task (Section G.4.3), in which the LLM must classify a clause
1116 (from a terms of service agreement) to one of eight types, where seven of the types denote
1117 clauses that would potentially be considered “unfair” under European law [42].

1118 **Significance and value** Lawyers spend significant time and energy reviewing legal documents
1119 (e.g., contracts, leases, etc.). Manual review serves an important purpose, allowing parties to identify
1120 potentially problematic terms. Parties will sometimes review agreements that have already been
1121 signed, in response to changing world events. For instance, the COVID-19 pandemic led many
1122 firms to inspect agreements for the existence of *force majeure* clauses, which ordinarily specify
1123 how contractual expectations should be handled in the event of major world crises [24]. Because
1124 legal documents are long and require legal training to understand, the process of reviewing is often
1125 extremely expensive [31]. This, in turn, presents significant access-to-justice concerns. Because most
1126 individuals do not have the financial capacity to consult lawyers prior to entering legal agreements,
1127 they are oblivious to when those agreements contain predatory, oppressive, or unconscionable terms.
1128 A rich legal scholarship has noted, for instance, the frequency at which legal agreements contain
1129 terms that would be invalidated by a court [13].

1130 The clause classification tasks in LEGALBENCH are thus amongst the most *practically useful* tasks
1131 in LEGALBENCH, as they capture an actual current-day use case for LLMs. As the complexity of
1132 clause classification depends both on the clause category and document type, LEGALBENCH tasks
1133 span a range of clause categories and source documents.

1134 G.4.1 CUAD Tasks

1135 We adapt the CUAD dataset for LEGALBENCH [31]. The original dataset consists of 500 contracts,
1136 each annotated with up to 41 different clause types. These contracts varied significantly in length,
1137 ranging from a few pages to over one-hundred pages. In the original work, [31] studied the ability for
1138 BERT-base language models to identify the text spans corresponding to different types of clauses.
1139 The principal difficulties were (1) the length of the contract, and (2) the lack of significant training
1140 data.

1141 We adapt the CUAD dataset as follows. We select 38 of the 41 clause categories. For each selected
1142 category, we construct a dataset consisting of (1) clauses in the CUAD contracts which are assigned
1143 to that category, and (2) an equal number of clauses randomly sampled from other categories. This
1144 produces a balanced binary classification task for clause category, where the purpose is to identify
1145 which clauses belong to the respective category. A table with the selected categories, and their
1146 descriptions is found below.

1147 Table 14 lists each task, a “description” of the category corresponding to the task, and an example of
1148 a clause which meets the category criteria. In accordance with [31], the description is presented as
1149 the question posed to the annotators during data labeling. If a clause yields an affirmative answer
1150 with regards to the question, then the label is “Yes”. Otherwise the label is “No”.

1151 In LEGALBENCH, the CUAD tasks are denoted as `cuad_*`.

Table 14: CUAD Tasks

Task
<p>Task name: cuad_affiliate_license-licensee</p> <p>Description: Does the clause describe a license grant to a licensee (incl. sublicensor) and the affiliates of such licensee/sublicensor?</p> <p>Example: [***], Valeant hereby grants to Dova a fully paid-up, royalty free, non-transferable, non-exclusive license (with a limited right to sub-license to its Affiliates) to any Valeant Property that appears on, embodied on or contained in the Product materials or Product Labeling solely for use in connection with Dova's promotion or other commercialization of the Product in the Territory.</p>
<p>Task name: cuad_affiliate_license-licensor</p> <p>Description: Does the clause describe a license grant by affiliates of the licensor or that includes intellectual property of affiliates of the licensor?</p> <p>Example: "Company Licensed Know-How" means all Know-How owned by any Company Entity as of the Effective Date and used or held for use in the Arizona Field as of the Effective Date.<omitted>Subject to the terms and conditions of this Agreement, the Company hereby grants to Seller a perpetual, non-exclusive, royalty-free license in, to and under the Company Licensed Know-How for use in the Arizona Field throughout the world.</p>
<p>Task name: cuad_anti-assignment</p> <p>Description: Does the clause require consent or notice of a party if the contract is assigned to a third party?</p> <p>Example: Except as otherwise set forth herein, neither party shall transfer, assign or cede any rights or delegate any obligations hereunder, in whole or in part, whether voluntarily or by operation of law, without the prior written consent of the other party, which consent may be withheld at the other party's reasonable business discretion; provided, however, that either party may transfer this Agreement without prior written consent of the other to an Affiliate of such party, or to the surviving party in a merger or consolidation, or to a purchaser of all or substantially all of its assets.</p>
<p>Task name: cuad_audit_rights</p> <p>Description: Does the clause give a party the right to audit the books, records, or physical locations of the counterparty to ensure compliance with the contract?</p> <p>Example: For avoidance of doubt, all audits under this Section shall be conducted solely by an independent public accountant as described in the foregoing sentence.</p>
<p>Task name: cuad_cap_on_liability</p> <p>Description: Does the clause specify a cap on liability upon the breach of a party's obligation? This includes time limitation for the counterparty to bring claims or maximum amount for recovery.</p> <p>Example: EXCEPT FOR LIABILITIES UNDER SECTION 7.2 [Indemnity], NEITHER PARTY'S AGGREGATE LIABILITY ARISING OUT OF OR IN CONNECTION WITH THIS AGREEMENT OR THE TRANSACTIONS CONTEMPLATED HEREBY, WHETHER IN CONTRACT, TORT (INCLUDING NEGLIGENCE), WARRANTY OR OTHERWISE, SHALL EXCEED [***].</p>
<p>Task name: cuad_change_of_control</p> <p>Description: Does the clause give one party the right to terminate or is consent or notice required of the counterparty if such party undergoes a change of control, such as a merger, stock sale, transfer of all or substantially all of its assets or business, or assignment by operation of law?</p> <p>Example: Notwithstanding the foregoing, if any Party to this Agreement (or any of its successors or permitted assigns) (a) shall enter into a consolidation or merger transaction in which such Party is not the surviving entity and the surviving entity acquires or assumes all or substantially all of such Party's assets, (b) shall transfer all or substantially all of such Party's assets to any Person or (c) shall assign this Agreement to such Party's Affiliates, then, in each such case, the assigning Party (or its successors or permitted assigns, as applicable) shall ensure that the assignee or successor- in-interest expressly assumes in writing all of the obligations of the assigning Party under this Agreement, and the assigning Party shall not be required to seek consent, but shall provide written notice and evidence of such assignment, assumption or succession to the non-assigning Party.</p>

Table 14 – continued from previous page

Task
<p>Task name: cuad_competitive_restriction_exception Description: Does the clause mention exceptions or carveouts to Non-Compete, Exclusivity and No-Solicit of Customers? Example: Notwithstanding the foregoing, Excite may make available opportunities on the Excite Site to purchase Music Products from parties other than Sponsor if such Music Products are not available from Sponsor so long as, prior to entering into arrangements to make available opportunities to purchase Music Products from parties other than Sponsor, Excite notifies Sponsor of its interest in the Music Products and gives Sponsor thirty (30) days to make the desired Music Products available through the Sponsor Site.</p>
<p>Task name: cuad_covenant_not_to_sue Description: Is a party restricted from contesting the validity of the counterparty’s ownership of intellectual property or otherwise bringing a claim against the counterparty for matters unrelated to the contract? Example: In connection with any reference to the Trademarks, Distributor shall not in any manner represent that it has an ownership interest in the Trademarks or registration(s) thereof, and Distributor acknowledges that no action by it or on its behalf shall create in Distributor’s favor any right, title, or interest in or to the Trademarks.</p>
<p>Task name: cuad_exclusivity Description: Does the clause specify exclusive dealing commitment with the counterparty? This includes a commitment to procure all “requirements” from one party of certain technology, goods, or services or a prohibition on licensing or selling technology, goods or services to third parties, or a prohibition on collaborating or working with other parties), whether during the contract or after the contract ends (or both). Example: Bosch hereby grants to Client the exclusive rights to sell and distribute the Product, subject to the Territory as set forth below, to certain select companies in the Automotive Industry, each of which shall be approved by Bosch in writing as requested by the Client on a case by case basis.</p>
<p>Task name: cuad_insurance Description: Is there a requirement for insurance that must be maintained by one party for the benefit of the counterparty? Example: Throughout the entire Term, you must maintain such types of insurance, in such amounts, as we may require.</p>
<p>Task name: cuad_ip_ownership_assignment Description: Does intellectual property created by one party become the property of the counterparty, either per the terms of the contract or upon the occurrence of certain events? Example: Upon written request of ArTara, University will assign the IND to ArTara.</p>
<p>Task name: cuad_irrevocable_or_perpetual_license Description: Does the clause specify a license grant that is irrevocable or perpetual? Example: Subject to the terms and conditions of this Agreement, as of the Distribution Date, SpinCo hereby grants to Nuance and the members of the Nuance Group a worldwide, non-exclusive, fully paid-up, perpetual and irrevocable, transferable (subject to ARTICLE VIII), sublicensable (subject to Section 4.01(g)) license to install, access, use, reproduce, perform, display, modify (including the right to create improvements and derivative works), further develop, sell, manufacture, distribute and market products and services based on, using or incorporating the SpinCo Shared Technology Assets within the Nuance Field of Use, together with natural extensions and evolutions thereof.</p>
<p>Task name: cuad_joint_ip_ownership Description: Does the clause provide for joint or shared ownership of intellectual property between the parties to the contract? Example: If the Domain Name is deemed a combination mark, neither party shall use the Domain Name for any purpose except as expressly provided herein or attempt to register the Domain Name, and the parties will jointly cooperate on any enforcement action of infringement of the Domain Name.</p>

Table 14 – continued from previous page

Task
<p>Task name: cuad_license_grant Description: Does the clause contain a license granted by one party to its counterparty? Example: Neoforma hereby grants VerticalNet a non-exclusive, non-transferable, royalty-free, right and license to link to the Neoforma Sites through a Neoforma Link.</p>
<p>Task name: cuad_liquidated_damages Description: Does the clause award either party liquidated damages for breach or a fee upon the termination of a contract (termination fee)? Example: You and each of your principals agree that the liquidated damages provision does not give us an adequate remedy at law for any default under, or for the enforcement of, any provision of this Agreement other than the Royalty Fee sections.</p>
<p>Task name: cuad_minimum_commitment Description: Does the clause specify a minimum order size or minimum amount or units per time period that one party must buy from the counterparty? Example: If the Quarterly Average Sales Force Size is less than [***] Sales Representatives for an applicable Calendar Quarter, then in calculating the promotion fee due under Section 6.1.1, the Applicable Percentage for such Calendar Quarter shall be reduced to a new percentage equal to [***].</p>
<p>Task name: cuad_most_favored_nation Description: Does the clause state that if a third party gets better terms on the licensing or sale of technology/goods/services described in the contract, the buyer of such technology/goods/services under the contract shall be entitled to those better terms? Example: Eutectix agrees that in the event any Licensed Products shall be sold (1) to any Affiliate (as defined herein), or (2) to a corporation, firm, or association with which, or individual with whom Eutectix or its stockholders or Affiliates shall have any agreement, understanding, or arrangement (such as, among other things, an option to purchase stock, or an arrangement involving a division of profits or special rebates or allowances) without which agreement, understanding, or arrangement, prices paid by such a corporation, firm, association or individual for the Licensed Products would be higher than the Net Sales Price reported by Eutectix, or if such agreement, understanding, or arrangement results in extending to such corporation, firm, association, or individual lower prices for Licensed Products than those charged to outside concerns buying similar products in similar amounts and under similar conditions, then, and in any such events, the royalties to be paid hereunder in respect of such Licensed Products shall be computed based on an assumed or deemed Net Sales Price equal to those charged to such outside concerns.</p>
<p>Task name: cuad_no-solicit_of_customers Description: Does the clause restrict a party from contracting or soliciting customers or partners of the counterparty, whether during the contract or after the contract ends (or both)? Example: During the Term of this Agreement, and for a period of one year thereafter, except as expressly provided in this Agreement, PlanetCAD shall not market any services to Customers without the prior written approval of Dassault Systemes.</p>
<p>Task name: cuad_no-solicit_of_employees Description: Does the clause restrict a party's soliciting or hiring employees and/or contractors from the counterparty, whether during the contract or after the contract ends (or both)? Example: You covenant that during the term of this Agreement, except as otherwise approved in writing by us, you will not, either directly or indirectly, for yourself, or through, on behalf of, or in conjunction with any person, persons, partnership, corporation or company: <omitted>2. Employ or seek to employ any person who is at that time employed by us, our affiliates, or by any other franchisee of ours, or otherwise directly or indirectly induce or seek to induce such person to leave his or her employment thereat.</p>
<p>Task name: cuad_non-compete Description: Does the clause restrict the ability of a party to compete with the counterparty or operate in a certain geography or business or technology sector? Example: Agent may not offer or promote competitive products without the consent of Kallo.</p>
<p>Task name: cuad_non-disparagement</p>

Table 14 – continued from previous page

Task
<p>Description: Does the clause require a party not to disparage the counterparty? Example: The Company shall not tarnish or bring into disrepute the reputation of or goodwill associated with the Seller Licensed Trademarks or Arizona.</p>
<p>Task name: cuad_non-transferable_license Description: Does the clause limit the ability of a party to transfer the license being granted to a third party? Example: Subject to the terms and conditions of this Agreement, Licensor hereby grants to Licensee, and Licensee hereby accepts from Licensor, a personal, non-exclusive, royalty-free right and license to use the Licensed Mark solely and exclusively as a component of Licensee’s own corporate name and in connection with marketing the investment management, investment consultation and investment advisory services that Investment Advisor may provide to Licensee.</p>
<p>Task name: cuad_post-termination_services Description: Does the clause subject a party to obligations after the termination or expiration of a contract, including any post-termination transition, payment, transfer of IP, wind-down, last-buy, or similar commitments? Example: Cisco agrees to repurchase all Product in Distributor’s inventory within [*****] days following the effective date of termination or expiration.</p>
<p>Task name: cuad_price_restrictions Description: Does the clause place a restriction on the ability of a party to raise or reduce prices of technology, goods, or services provided? Example: The prices set forth in Section 2.4(a) shall be subject to adjustment annually on the first day of each Product Year beginning in the calendar year 2000 and on the first day of each succeeding Product Year for the remainder of the Term and all renewals of this Agreement in proportion to the increase or decrease in the Consumer Price Index (CPI) as compared to the CPI as it existed on the first day of the Term of this Agreement.</p>
<p>Task name: cuad_revenue-profit_sharing Description: Does the clause require a party to share revenue or profit with the counterparty for any technology, goods, or services? Example: In consideration for the licenses granted to Corio pursuant to Section 2 (except Section 2.5) of this Agreement, Corio shall pay the revenue sharing fees specified in EXHIBIT B hereto.</p>
<p>Task name: cuad_rofr-rofo-rofn Description: Does the clause grant one party a right of first refusal, right of first offer or right of first negotiation to purchase, license, market, or distribute equity interest, technology, assets, products or services? Example: If Licensee shall have exercised such right, the closing shall be held at the corporate offices of Licensee on the closing date specified in the Offering Notice or the date that is ninety (90) days after the date of Licensee’s notice of its exercise of such right, whichever is later.</p>
<p>Task name: cuad_source_code_escrow Description: Does the clause require one party to deposit its source code into escrow with a third party, which can be released to the counterparty upon the occurrence of certain events (bankruptcy, insolvency, etc.)? Example: With each delivery of Software to Bank of America hereunder, Supplier shall deliver to Bank of America the Source Code for all Software and for all Updates, Upgrades and new releases of the Software.</p>
<p>Task name: cuad_termination_for_convenience Description: Does the clause specify that one party can terminate this contract without cause (solely by giving a notice and allowing a waiting period to expire)? Example: Customer may terminate this Agreement during the Term upon at least one (1) years’ written notice to M&I, provided that Customer pays M&I an early termination fee ("Termination for Convenience Fee") in an amount equal to REDACTED of the Estimated Remaining Value.</p>
<p>Task name: cuad_third_party_beneficiary</p>

Table 14 – continued from previous page

Task
<p>Description: Does the clause specify that there a non-contracting party who is a beneficiary to some or all of the clauses in the contract and therefore can enforce its rights against a contracting party?</p> <p>Example: Such covenants must be on a form that we provide, which form will, among other things, designate us as a third party beneficiary of such covenants with the independent right to enforce them.</p>
<p>Task name: cuad_uncapped_liability</p> <p>Description: Does the clause specify that a party’s liability is uncapped upon the breach of its obligation in the contract? This also includes uncap liability for a particular type of breach such as IP infringement or breach of confidentiality obligation</p> <p>Example: Subject to the foregoing as wen as Mobimagic’s obligations under this Agreement, Mobimagic shall not in any manner be held or be responsible or liable for any unforeseen contingency, claims, liabilities, demands. losses, damages or expenses arising due to absence of storage or retention of any PC Financial data which shall be the sole responsibility of PC Financial .</p>
<p>Task name: cuad_unlimited-all-you-can-eat-license</p> <p>Description: Does the clause grant one party an “enterprise,” “all you can eat” or unlimited usage license?</p> <p>Example: Subject to the terms and conditions of this Agreement, Commerce One hereby grants to Corio a fee-bearing, perpetual and irrevocable, nonexclusive, nontransferable (except in accordance with Section 14.1 of this Agreement), right and license in the Territory to<omitted>(iv) sublicense an unlimited number of Customers to access and use the Software and MarketSite.net Service only through the installation on Corio servers;</p>
<p>Task name: cuad_volume_restriction</p> <p>Description: Does the clause specify a fee increase or consent requirement, etc. if one party’s use of the product/services exceeds certain threshold?</p> <p>Example: Make himself available for four (4) sessions for production of photographs, or radio, television, video or other multi-media programming for use in Bizzingo’s advertising or promotional materials, with each such session not exceeding eight (8) hours.</p>
<p>Task name: cuad_effective_date</p> <p>Description: Does the clause specify the date upon which the agreement becomes effective?</p> <p>Example: This JV Agreement shall become effective on the signing date and shall have a duration of * years, extendable for a further * years, unless notice of non- renewal is sent one year before the natural expiry date.<omitted>2 April 2020</p>
<p>Task name: cuad_expiration_date</p> <p>Description: Does the clause specify the date upon which the initial term expires?</p> <p>Example: This Agreement shall be effective as of the Effective Date and shall continue in effect through December 31, 2021 and any Renewal Term (the "Term"), unless terminated earlier as set forth herein.</p>
<p>Task name: cuad_governing_law</p> <p>Description: Does the clause specify which state/country’s law governs the contract?</p> <p>Example: This Agreement shall be governed by and construed under the laws of the State of California, excluding conflict of laws provisions and excluding the 1980 United Nations Convention on Contracts for the International Sale of Goods.</p>
<p>Task name: cuad_notice_period_to_terminate_renewal</p> <p>Description: Does the clause specify a notice period required to terminate renewal?</p> <p>Example: Unless either party gives written notice to terminate this Agreement at least six (6) months prior to the end of said Initial Term, this Agreement shall continue on a year to year basis ("Extended Term(s)") until terminated by either party by giving written notice of termination thereof to the other party at least six (6) months prior to the end of the then current Extended Term.</p>
<p>Task name: cuad_renewal_term</p> <p>Description: Does the clause specify a renewal term?</p>

Table 14 – continued from previous page

Task

Example: This Agreement shall commence on the Effective Date and, unless sooner terminated in accordance with its terms, including by Ginkgo pursuant to Section 7.3 (Buy-Down Election) or extended by the mutual written agreement of the Parties, shall continue until the Intended End of Term (such time period, as may be extended pursuant to this Section 13.3.1 (Term - General), the "Term"); provided that, if, <omitted> at the expiration of the Intended End of Term, Ginkgo has paid the Minimum Cumulative Purchase Commitment, but will not have paid to BLI the Full Purchase Target, then the Term of this Agreement shall automatically extend for an additional [***] ([***)] year period from the date of the expiration of the then-Intended End of Term so that, among other things, BLI may potentially receive the benefit of the Full Purchase Target and Ginkgo may receive the continuing benefit of royalty-free licenses.

Task name: cuad_warranty_duration

Description: Does the clause specify a duration of any warranty against defects or errors in technology, products, or services provided under the contract?

Example: Airspan warrants that, following repair or replacement, the repaired or replaced Equipment or Software by Airspan shall be free from defects in materials and faulty workmanship and that the Software will conform in all material respects to Airspan’s published specifications therefor for ninety (90) days from date of shipment from Airspan to Distributor or until the end of the Initial Warranty Period, whichever is longer.

1152 **G.4.2 J.Crew Blocker**

1153 In LEGALBENCH, the J.Crew Blocker task is denoted as jcrew-blocker.

1154 **Background** Loan agreements often contain restrictive covenants that place limits on a borrower’s
 1155 activities to protect the lender’s interests. One such restrictive covenant that has become popular in
 1156 recent years is the “J.Crew blocker” provision. This provision was created in response to actions
 1157 taken by the retailer J.Crew in 2016. J.Crew transferred valuable intellectual property assets out of
 1158 the collateral pool for its existing loans by moving them into a new unrestricted subsidiary. This
 1159 subsidiary was then able to use the IP assets as collateral to obtain new financing.

1160 The J.Crew blocker provision aims to prevent this type of activity by prohibiting borrowers from
 1161 transferring IP assets out of the reach of existing lenders. There are two key components to a J.Crew
 1162 blocker:

- 1163 1. A prohibition on transferring IP assets to unrestricted subsidiaries. This prevents the
 1164 borrower from moving assets outside the scope of lender restrictions.
- 1165 2. A requirement to obtain lender consent for any IP transfers to subsidiaries. This gives
 1166 lenders oversight and control over how IP assets are distributed within the corporate group.

1167 The presence of a robust J.Crew blocker in a loan agreement is designed to keep material assets
 1168 within the collateral pool, and thereby protect lenders from borrowers’ attempts to secure additional
 1169 debt through unexpected transfers of IP. For this reason, J.Crew blocker provisions have been widely
 1170 adopted in leveraged loan agreements.

1171 **Task** The J.Crew blocker task requires determining whether a given provision in a loan agreement
 1172 qualifies as a J.Crew blocker. To make this determination, the provision must be analyzed to assess
 1173 whether it contains:

- 1174 1. A prohibition on transferring IP assets to unrestricted subsidiaries

1175 AND/OR

- 1176 2. A requirement to obtain lender consent for IP transfers to any subsidiary.

1177 If the provision includes one or both of these components, it can be classified as a J.Crew blocker. If
 1178 not, the provision does not meet the criteria.

Clause	J.Crew Blocker Provision?
<p>provided that (i) immediately before and after such designation, no Event of Default shall have occurred and be continuing, (ii) in the case of the designation of any Subsidiary as an Unrestricted Subsidiary, such designation shall constitute an Investment in such Unrestricted Subsidiary (calculated as an amount equal to the sum of (x) the fair market value of the Equity Interests of the designated Subsidiary and any of its Subsidiaries that are owned by Holdings or any Restricted Subsidiary, immediately prior to such designation (such fair market value to be calculated without regard to any Obligations of such designated Subsidiary or any of its Subsidiaries under the Guaranty Agreement) and (y) the aggregate principal amount of any Indebtedness owed by such Subsidiary and any of its Subsidiaries to Holdings or any of the Restricted Subsidiaries immediately prior to such designation, all calculated, except as set forth in the parenthetical to clause (x) above, on a consolidated basis in accordance with U.S. GAAP), and such Investment shall be permitted under Section 10.05, (iii) no Subsidiary may be designated as an Unrestricted Subsidiary if it or any of its Subsidiaries is a Restricted Subsidiary for the purpose of any Refinancing Notes Indenture, any Permitted Pari Passu Notes Document, any Permitted Pari Passu Loan Documents, any Permitted Junior Notes Document or other debt instrument, with a principal amount in excess of the Threshold Amount, (iv) following the designation of an Unrestricted Subsidiary as a Restricted Subsidiary, Holdings shall comply with the provisions of Section 9.12 with respect to such designated Restricted Subsidiary, (v) no Restricted Subsidiary may be a Subsidiary of an Unrestricted Subsidiary (and any Subsidiary of an Unrestricted Subsidiary that is acquired or formed after the date of designation shall automatically be designated as an Unrestricted Subsidiary) and (vi) in the case of the designation of any Subsidiary as an Unrestricted Subsidiary, each of (x) the Subsidiary to be so designated and (y) its Subsidiaries has not, at the time of designation, and does not thereafter, create, incur, issue, assume, guarantee or otherwise become directly or indirectly liable with respect to any Indebtedness pursuant to which the lender has recourse to any of the assets of Holdings or any Restricted Subsidiary (other than Equity Interests in an Unrestricted Subsidiary).</p>	No
<p>provided, that (i) immediately before and after such designation, no Event of Default exists (including after giving effect to the reclassification of Investments in, Indebtedness of and Liens on the assets of, the applicable Restricted Subsidiary or Unrestricted Subsidiary), (ii) as of the date of the designation thereof, no Unrestricted Subsidiary shall own any Capital Stock in any Restricted Subsidiary of the Borrower or hold any Indebtedness of or any Lien on any property of the Borrower or its Restricted Subsidiaries and (iii) no subsidiary may be designated as an Unrestricted Subsidiary if it owns intellectual property that is material to the business of the Borrower and its Restricted Subsidiaries, taken as a whole (such intellectual property, Material Intellectual Property), at the time of designation, other than in connection with transactions that have a bona fide business purpose so long as such transactions are not undertaken to facilitate a financing or a Restricted Payment or undertaken in connection with a liability management transaction. Notwithstanding anything contained in this Section 6.05 to the contrary, in no event shall (a) the Borrower or any Restricted Subsidiary be permitted to make or own any Investment in the Holdings direct or indirect equityholders constituting Material Intellectual Property (other than pursuant to a bona fide transition service or similar arrangement or in the same manner as other customers, suppliers or commercial partners of the relevant transferee generally) or (b) any Restricted Subsidiary transfer ownership of, or license on an exclusive basis, any Material Intellectual Property to any Unrestricted Subsidiary, other than in connection with transactions that have a bona fide business purpose and so long as such transactions are not undertaken to facilitate a financing or a Restricted Payment or undertaken in connection with a liability management transaction. Notwithstanding anything contained in this Section 6.06 to the contrary, in no event shall (a) the Borrower or any Restricted Subsidiary be permitted to make any Disposition of Material Intellectual Property to Holdings direct or indirect equityholders (other than pursuant to a bona fide transition service or similar arrangement or in the same manner as other customers, suppliers or commercial partners of the relevant transferee generally) or (b) any Restricted Subsidiary make any Disposition, constituting either a transfer of ownership or an exclusive license, of any Material Intellectual Property to any Unrestricted Subsidiary, other than in connection with transactions that have a bona fide business purpose and so long as such transactions are not undertaken to facilitate a financing or a Restricted Payment or undertaken in connection with a liability management transaction.</p>	Yes

Table 15: Examples for jcrew_blocker

1179 **Construction process** The dataset for this task was constructed by legal experts extracting real
1180 examples of provisions from public loan agreements. Each example was labeled as either meeting

1181 the criteria for a J.Crew blocker or not. The dataset contains 60 total examples, organized into two
1182 columns: "Text" (containing the clause in question) and "Label" (indicating whether the clause is a
1183 J.Crew Blocker provision). Each clause was analyzed and classified as a J.Crew Blocker provision
1184 ("Yes") or not ("No"). The construction process involved manually reviewing and annotating these
1185 samples, ensuring that each clause was accurately categorized. This process, carried out by legal
1186 experts, provides definitive answers to each sample, eliminating ambiguity.

1187 **Significance and value** The ability to identify J.Crew blocker provisions is important for both
1188 lenders and borrowers in leveraged finance. For lenders, it helps ensure key protections are included
1189 in loan agreements. For borrowers, it provides insight into restrictions being placed on their activities.
1190 Given the widespread adoption of J.Crew blockers, this is a task that requires proficiency to actively
1191 participate in the leveraged loan market. The task serves as an important measure of an LLM's ability
1192 to understand and apply legal concepts, particularly those related to secured lending and intellectual
1193 property law. It also tests the LLM's capacity to analyze and interpret legal provisions. Given the
1194 increasing complexity and sophistication of financial transactions, the ability to accurately identify
1195 and understand such provisions is a valuable skill for any LLM. This task, therefore, provides a useful
1196 measure of progress for LLMs in their understanding and interpretation of complex legal clauses.

1197 **G.4.3 Unfair Terms of Service**

1198 In LEGALBENCH, the Unfair Terms of Service task is denoted as `unfair_tos`

1199 **Background** An array of recent work has found that consumers rarely read terms of service
1200 agreements [45, 32]. As a result, consumers regularly sign agreements or contracts containing
1201 provisions that (1) they lack awareness of, and/or (2) would consider as “unfair” or “predatory.”
1202 Reasons for this phenomenon include the sheer amount of time it would take to read every terms of
1203 service agreement, the obtuse language of these agreements, and the lack of actual recourse on an
1204 individual basis.

1205 With reference to European consumer law, [42] identify eight categories of clauses in terms-of-service
1206 agreements which could be considered “potentially unfair”:

- 1207 • Arbitration: clauses which mandated that all disputes between the parties would be resolved
1208 through arbitration.
- 1209 • Unilateral change: clauses which allow the provider to modify the terms of service and/or
1210 the service itself.
- 1211 • Content removal: clauses which give the provider a right to modify/delete a user's content
- 1212 • Jurisdiction: clauses which specify a jurisdiction in which claims must be brought, regardless
1213 of where the user lives.
- 1214 • Choice of law: clauses which specify the country's law which governs disputes arising under
1215 the contract, regardless of where the user lives.
- 1216 • Limitation of liability: clauses which limit the liability of the service provider.
- 1217 • Unilateral termination: clauses which empower the service provider to terminate/suspend
1218 the service at their discretion.
- 1219 • Contract by using: clauses which stipulate that a consumer is bound by the terms of service
1220 simply by using the service.

1221 A more detailed description of these categories can be found in [42].

1222 **Task** The Unfair Terms of Service task requires an LLM to determine—given a clause from a terms
1223 of service agreement—whether it belongs to one of the above eight categories, and if so, which one.

1224 **Construction process** We use the version of data available in [12], which takes a subset from [42].
1225 Unlike [12]—which frames the task as distinguishing “fair” from “unfair” clauses—we cast the task
1226 as 8-way multiclassification task across the original categories identified in [42].

Clause	Clause Type
you also acknowledge that a variety of evernote actions may impair or prevent you from accessing your content or using the service at certain times and/or in the same way , for limited periods or permanently , and agree that evernote has no responsibility or liability as a result of any such actions or results , including , without limitation , for the deletion of , or failure to make available to you , any content .	Arbitration
if you do not terminate your agreement before the date the revised terms become effective , your continued access to or use of the airbnb platform will constitute acceptance of the revised terms .	Choice of law
we may at any time and from time to time , in our sole discretion , change the fees and charges , or add new fees and charges , in relation to any of the products .	Content removal
you and academia.edu agree that any dispute , claim or controversy arising out of or relating to these terms or the breach , termination , enforcement , interpretation or validity thereof or the use of the site or services (collectively , “ disputes ”) will be settled by binding arbitration , except that each party retains the right : (i) to bring an individual action in small claims court and (ii) to seek injunctive or other equitable relief in a court of competent jurisdiction to prevent the actual or threatened infringement , misappropriation or violation of a party ’ s copyrights , trademarks , trade secrets , patents or other intellectual property rights (the action described in the foregoing clause (ii) , an “ ip protection action ”) .	Contract by using
if we find that any shared content in your account violates our terms of service (including by violating another person ’ s intellectual property or privacy rights) , we reserve the right to un-share or take down such content .	Jurisdiction
if you live in the european union : you agree that the laws of ireland , excluding conflict of laws rules , shall exclusively govern any dispute relating to this contract and/or the services .	Limitation of liability
oculus does not endorse or guarantee the opinions , views , advice or recommendations posted or sent by users .	Other
if you object to the changes , nintendo reserves the right to terminate this agreement or any portion of it upon reasonable notice and you will have to register again if you wish to continue using the nintendo account service under the new terms and conditions .	Unilateral change
unless you and we agree otherwise , in the event that the agreement to arbitrate above is found not to apply to you or to a particular claim or dispute , either as a result of your decision to opt out of the agreement to arbitrate or as a result of a decision by the arbitrator or a court order , you agree that any claim or dispute that has arisen or may arise between you and ebay must be resolved exclusively by a state or federal court located in salt lake county , utah .	Unilateral termination

Table 16: Examples for unfair_tos

1227 **Significance and value** Unlike the CUAD and J.Crew Blocker task, the Unfair TOS task evaluates
1228 a LLM’s ability to perform multiclass clause classification across a highly imbalanced dataset.

1229 **G.4.4 Contract QA**

1230 In LEGALBENCH, the Contract QA task is denoted as `contract_qa`.

Class	Number of samples
Other	3454
Contract by using	15
Choice of law	38
Content removal	53
Unilateral change	70
Arbitration	98
Limitation of liability	28
Unilateral termination	32
Jurisdiction	25

Table 17: Test set class distribution

1231 **Background** Each of the above tasks evaluates the capacity for LLMs to learn to recognize a
1232 single type of clause, given a description of that clause and/or examples of it. The Contract QA
1233 task generalizes this across multiple clause types, evaluating an LLM’s ability to recognize legal
1234 provisions that are *not* described in the prompt.

1235 **Task** Each sample in the dataset consists of (1) a contract clause, and (2) a question asking if the
1236 clause is an example of a provision type (e.g., “Is this a severability clause?”). Across the dataset, the
1237 questions correspond to 22 different legal provisions. Questions and provisions are paired such that
1238 for each provision type, the LLM is presented with two clauses that are an example of the type, and
1239 two clauses which are not.

1240 **Construction Process** The data was manually extracted from a set of sample agreements con-
1241 tributed by a LegalTech vendor and from public sources. It represents a variety of contracts, such
1242 as:

- 1243 • Vendor or Partner Data Protection Agreements (DPA)
- 1244 • Master Services Agreements (MSA)
- 1245 • Licensing Terms
- 1246 • BIPA consents

Clause	Question	Answer
This Agreement shall be governed by and construed in accordance with the laws of the State of New York, without giving effect to any choice of law or conflict of law provisions.	Does the clause discuss BIPA consent?	No
If a dispute arises between the parties under this Agreement that cannot be resolved through good faith negotiations within a reasonable period of time, such dispute shall be escalated to an executive officer of each party for resolution. If such executive officers are unable to resolve such dispute within a reasonable period of time after escalation, either party may pursue any available legal remedies.	Does the clause discuss how disputes may be escalated?	Yes

Table 18: Examples for contract_qa task.

1247 **G.5 Consumer Contracts QA**

1248 In LEGALBENCH, the Consumer Contracts QA task is denoted as `consumer_contracts_qa`.

1249 **Background** Consumer contracts govern many economic and social activities, ranging from retail
1250 purchases and online search to social media and entertainment. These contracts can affect consumers’
1251 access to services, control terms of payment, and determine the remedies available when consumers’
1252 rights are violated. Despite the importance of these legal agreements, consumers typically lack the
1253 time, expertise, and incentive to properly examine how consumer contracts impact their rights and
1254 interests. This issue is known as the “no-reading” problem [3, 2]. LLMs may offer a solution. By
1255 reading consumer contracts and explaining their legal ramifications, LLMs could enable consumers
1256 to better understand and exercise their legal rights in many everyday contexts.

1257 **Task** The Consumer Contracts QA task, first introduced in [36], aims to examine the degree to
1258 which an LLM can understand certain consumer contracts. Specifically, the task is comprised of 200
1259 yes/no legal questions relating to the terms of service of popular websites. Examples of questions are
1260 provided in the table below.

1261 In addition to the original 200 questions, the task includes an alternatively worded version of all
1262 200 questions. While each question’s content is substantially the same across both versions of the
1263 question, the alternatively worded questions are, by design, less readable, that is, more difficult
1264 for a human to read. Comparing performance across the original questions and the alternatively
1265 worded questions can help assess an LLM’s brittleness in performing the task at hand. An example is
1266 provided in the table below:

1267 **Construction Process** The task was introduced in [36]. To construct the dataset, an attorney
1268 drafted 200 yes/no questions relating to the terms of service of the 20 most-visited U.S. websites
1269 (10 questions per document), as well as an alternatively worded version of all 200 questions. The
1270 questions relate to a wide range of legal issues arising in the terms of service, including eligibility to
1271 access services, payment for services, limitations of liability, intellectual property rights, and dispute
1272 resolution procedures. Answers to all questions can be obtained from the applicable terms of service.

1273 **Significance and Value** Given the ubiquity of consumer contracts, LLMs capable of reading these
1274 documents and communicating their contents to consumers might offer significant benefits. These
1275 benefits, however, are contingent on a model’s accuracy and reliability. LLMs that misinterpret the
1276 provisions of consumer contracts may hinder consumers’ ability to understand and exercise their
1277 contractual rights. The Consumer Contracts QA task is a preliminary attempt at evaluating the ability
1278 of LLMs to read certain consumer contracts.

1279 **Evaluation** LLM outputs are evaluated using exact-match and macro-F1.

Contract: Content Removal and Disabling or Terminating Your Account

We can remove any content or information you share on the Service if we believe that it violates these Terms of Use, our policies (including our Instagram Community Guidelines), or we are permitted or required to do so by law. We can refuse to provide or stop providing all or part of the Service to you (including terminating or disabling your your access to the Facebook Products and Facebook Company Products) immediately to protect our community or services, or if you create risk or legal exposure for us, violate these Terms of Use or our policies (including our Instagram Community Guidelines), if you repeatedly infringe other people’s intellectual property rights, or where we are permitted or required to do so by law. We can also terminate or change the Service, remove or block content or information shared on our Service, or stop providing all or part of the Service if we determine that doing so is reasonably necessary to avoid or mitigate adverse legal or regulatory impacts on us. If you believe your account has been terminated in error, or you want to disable or permanently delete your account, consult our Help Center. When you request to delete content or your account, the deletion process will automatically begin no more than 30 days after your request. It may take up to 90 days to delete content after the deletion process begins. While the deletion process for such content is being undertaken, the content is no longer visible to other users, but remains subject to these Terms of Use and our Data Policy. After the content is deleted, it may take us up to another 90 days to remove it from backups and disaster recovery systems.

Content will not be deleted within 90 days of the account deletion or content deletion process beginning in the following situations:

where your content has been used by others in accordance with this license and they have not deleted it (in which case this license will continue to apply until that content is deleted); or

where deletion within 90 days is not possible due to technical limitations of our systems, in which case, we will complete the deletion as soon as technically feasible; or

where deletion would restrict our ability to: investigate or identify illegal activity or violations of our terms and policies (for example, to identify or investigate misuse of our products or systems); protect the safety and security of our products, systems, and users; comply with a legal obligation, such as the preservation of evidence; or comply with a request of a judicial or administrative authority, law enforcement or a government agency; in which case, the content will be retained for no longer than is necessary for the purposes for which it has been retained (the exact duration will vary on a case-by-case basis).

If you delete or we disable your account, these Terms shall terminate as an agreement between you and us, but this section and the section below called "Our Agreement and What Happens if We Disagree" will still apply even after your account is terminated, disabled, or deleted.

Question: According to the terms, 30 days after Ive asked to delete content, can other users see that content?

Answer: No

Contract: 16. Termination You may terminate these Terms at any time and for any reason by deleting your Account and discontinuing use of all Services. If you stop using the Services without deactivating your Account, your Account may be deactivated due to prolonged inactivity.

We may suspend or terminate your Account, moderator status, or ability to access or use the Services at any time for any or no reason, including for violating these Terms or our Content Policy.

The following sections will survive any termination of these Terms or of your Account: 4 (Your Content), 6 (Things You Cannot Do), 10 (Indemnity), 11 (Disclaimers), 12 (Limitation of Liability), 13 (Governing Law and Venue), 16 (Termination), and 17 (Miscellaneous).

17. Miscellaneous These Terms constitute the entire agreement between you and us regarding your access to and use of the Services. Our failure to exercise or enforce any right or provision of these Terms will not operate as a waiver of such right or provision. If any provision of these Terms is, for any reason, held to be illegal, invalid, or unenforceable, the rest of the Terms will remain in effect. You may not assign or transfer any of your rights or obligations under these Terms without our consent. We may freely assign any of our rights and obligations under these Terms.

Question: Will certain terms remain in force notwithstanding a users termination of the service?

Answer: Yes

Table 19: Examples for consumer_contracts_qa

Original wording

Am I allowed to be paid for writing a Wikipedia article, assuming I disclose who’s paying me?

Alternative wording

Are Wikipedia contributors permitted to receive payment in respect of their contributions, provided they disclose the identity of the person or institution providing such payment?

Table 20: Example of reworded question.

1280 **G.6 Contract NLI Tasks**

1281 In LEGALBENCH, the Contract NLI tasks are denoted as `contract_nli_*`.

1282 **Task** The Contract NLI tasks require a LLM—given an excerpt of a contract and an assertion about
1283 the legal effect of that excerpt—to determine whether the assertion is supported or unsupported by
1284 the excerpt.

1285 **Construction process** These tasks are constructed by transforming data released by [37]. The
1286 original dataset consists of 607 contracts and 17 assertions (e.g., “Receiving Party shall not disclose
1287 the fact that Agreement was agreed or negotiated”). Each contract is labeled for each assertion as
1288 supporting, negating, or not mentioning the assertion. Please refer to the original paper for details on
1289 annotation.

1290 We restructure this dataset for a short-context LLM setting. Specifically, we treat each assertion as a
1291 separate task, where the objective is to determine whether a contract excerpt is supportive (or not) of
1292 the assertion. For each instance where a contract is supportive of an assertion, [37] has annotated
1293 the excerpt of the contract that is supportive. When creating a task, we use the supportive excerpts
1294 for the assertion from the test set as positive instances. To generate negative instances, we combine
1295 excerpts where the assertion is contradicted with a random sample of excerpts associated with other
1296 assertions. We treat both groups of excerpts as instances which are “unsupportive” of the assertion.
1297 We transform the assertion into a Yes/No question, where the LLM is asked to determine if a clause
1298 satisfies the assertion.

1299 Table 21 lists each task, the assertion associated with the task, and an example of an excerpt which
1300 supports the assertion.

Table 21: ContractNLI Tasks

Task
<p>Task name: <code>contract_nli_return_of_confidential_information</code> Question: Identify if the clause provides that the Receiving Party shall destroy or return some Confidential Information upon the termination of Agreement. Example: Upon receipt by the Recipient of a written demand from the Disclosers: 8.1.1 the Recipient must return or procure the return to the Disclosers or, as the Disclosers may require, destroy or procure the destruction of any and all materials containing the Confidential Information together with all copies; 8.1.2 if the Disclosers requires, the Recipient must provide the Disclosers with a certificate or such other evidence as the Disclosers may reasonably require duly signed or executed by an officer of the Recipient confirming that the Recipient has complied with all of its obligations under this Agreement including about return, destruction and deletion of Confidential Information and media; 8.1.3 the Recipient must delete or procure the deletion of all electronic copies of Confidential Information; and 8.1.4 the Recipient must make, and procure that the Authorised Persons shall make, no further Use of the Confidential Information.</p>
<p>Task name: <code>contract_nli_no_licensing</code> Question: Identify if the clause provides that the Agreement shall not grant Receiving Party any right to Confidential Information. Example: No license to the receiving party under any trade secrets or patents or otherwise with respect to any of the Proprietary Information is granted or implied by conveying proprietary Information or other information to such party, and none of the information transmitted or exchanged shall constitute any representation, warranty, assurance, guaranty or inducement with respect to the infringement of patents or other rights of others.</p>
<p>Task name: <code>contract_nli_confidentiality_of_agreement</code> Question: Identify if the clause provides that the Receiving Party shall not disclose the fact that Agreement was agreed or negotiated.</p>

Table 21 – continued from previous page

Task

Example: In addition, except as permitted herein, Recipient shall not disclose the fact that the parties are exchanging Confidential Information and having discussions. In connection therewith, it is agreed that no public release or disclosure of any contemplated transaction shall be made except by a mutually agreed disclosure except that each party may make such disclosure if advised by its outside securities counsel in writing that such disclosure is required; PROVIDED, HOWEVER, that in such event such party will notify the other party that it intends, as a preliminary matter, to take such action and the outside securities counsel of such party shall first discuss the matter with the outside securities counsel of the other party before any definitive decision is made on the disclosure.

Task name: contract_nli_explicit_identification

Question: Identify if the clause provides that all Confidential Information shall be expressly identified by the Disclosing Party.

Example: 1. As used herein, the term “Proprietary Information” refers to any and all Information of a confidential, proprietary, or secret nature which is applicable to or related In any way to (i) the business, present or future, of the Disclosing Party, (ii) the research and development or investigations of the Disclosing Party or (iii) the business of any customer of the Disclosing Party; provided, in each case, that such information is delivered to the Receiving Party by the Disclosing Party and (a) is marked or identified in writing as “Confidential”, (b) if verbal or visual disclosure, is identified as “Confidential” in a writing within ten (10) business days of such disclosure, or

Task name: contract_nli_survival_of_obligations

Question: Identify if the clause provides that some obligations of Agreement may survive termination of Agreement.

Example: b. This Agreement shall be valid when signed by duly authorised representatives of the Parties and shall be binding on each Party for 10 (ten) years as from the date of signature of the last signatory, even if at the end of the negotiations a data sharing agreement is not signed between the Parties, or until such time as the Information enters into the public domain.

Task name: contract_nli_permmissible_development_of_similar_information

Question: Identify if the clause provides that the Receiving Party may independently develop information similar to Confidential Information.

Example: "Confidential Information" of a disclosing party ("Discloser") means the following, regardless of its form and including copies made by the receiving party ("Recipient"), whether the Recipient becomes aware of it before or after the date of this Agreement: except where that information is: Independently developed by the Recipient without use, directly or indirectly of Confidential Information received from the Discloser.

Task name: contract_nli_permmissible_post-agreement_possession

Question: Identify if the clause provides that the Receiving Party may retain some Confidential Information even after the return or destruction of Confidential Information.

Example: 9. Upon the Disclosing Party’s written request, the Receiving Party shall (at the Receiving Party’s election) promptly return or destroy (provided that any such destruction shall be certified by a duly authorized Representative of the Receiving Party) all Confidential Information of the Disclosing Party and all copies, reproductions, summaries, analyses or extracts thereof or based thereon (whether in hard-copy form or an intangible media, such as electronic mail or computer files) in the Receiving Party’s possession or in the possession of any Representative of the Receiving Party; provided, however: (i) that if a legal proceeding has been instituted to seek disclosure of the Confidential Information, such material shall not be destroyed until the proceeding is settled or a final judgment with respect thereto has been rendered; (ii) that the Receiving Party shall not, in connection with the foregoing obligations, be required to identify or delete Confidential Information held electronically in archive or back-up systems in accordance with general systems archiving or backup policies; and (iii) that the Receiving Party shall not be obligated to return or destroy Confidential Information of the Disclosing Party to the extent the Receiving Party is required to retain a copy pursuant to applicable law, and further provided that the Receiving Party will not, and the Receiving Party will use reasonable measures to cause its employees not to, access such Confidential Information so archived or backed-up.

Task name: contract_nli_inclusion_of_verbally_conveyed_information

Table 21 – continued from previous page

Task

Question: Identify if the clause provides that Confidential Information may include verbally conveyed information.

Example: I acknowledge that The Business Partnership has provided, and/or has agreed to provide in the future, to me information of a confidential or proprietary nature (the Confidential Information) Confidential Information shall mean any information or data relating to any clients of The Business Partnership business or affairs disclosed whether in writing, orally or by any other means.

Task name: contract_nli_sharing_with_third-parties

Question: Identify if the clause provides that the Receiving Party may share some Confidential Information with some third-parties (including consultants, agents and professional advisors).

Example: Receiving Party shall carefully restrict access to Sensitive Information to employees, contractors and third parties as is reasonably required and shall require those persons to sign nondisclosure restrictions at least as protective as those in this Agreement.

Task name: contract_nli_permmissible_copy

Question: Identify if the clause provides that the Receiving Party may create a copy of some Confidential Information in some circumstances.

Example: If any party makes copies of the Confidential Information of the other party, such copies shall also constitute Confidential Information and any and all confidential markings on such documents shall be maintained.

Task name: contract_nli_notice_on_compelled_disclosure

Question: Identify if the clause provides that the Receiving Party shall notify Disclosing Party in case Receiving Party is required by law, regulation or judicial process to disclose any Confidential Information.

Example: If the Receiving Party or its Representatives are requested or required in any judicial, arbitral or administrative proceeding or by any governmental or regulatory authority to disclose any Evaluation Material (whether by deposition, interrogatory, request for documents, subpoena, civil investigative demand, or otherwise), or the Receiving Party is so requested or required to disclose any of the facts disclosure of which is prohibited under paragraph (3)(e) of this Agreement, the Receiving Party shall give the Furnishing Party prompt notice of such request so that the Furnishing Party may seek an appropriate protective order or other appropriate remedy and/or waive compliance with the provisions of this Agreement, and, upon the Furnishing Party's request and at the Furnishing Party's expense, shall reasonably cooperate with the Furnishing Party in seeking such an order. (d) Notice If either Party proposes to make any disclosure in reliance on clause (i) above, the disclosing Party shall, to the extent practicable, provide the other Party with the text of the proposed disclosure as far in advance of its disclosure as is practicable and shall in good faith consult with and consider the suggestions of the other Party concerning the nature and scope of the information it proposes to disclose. Notwithstanding the foregoing, a Party may make such public announcement or public statement if in the opinion of such Party's outside counsel or General Counsel, such public announcement or public statement is necessary to avoid committing a violation of law or of any rule or regulation of any securities association, stock exchange or national securities quotation system on which such Party's securities are listed or trade. In such event, the disclosing Party shall use its reasonable best efforts to give advance notice to the other Party and to consult with the other Party on the timing and content of any such public announcement or public statement.

Task name: contract_nli_permmissible_acquirement_of_similar_information

Question: Identify if the clause provides that the Receiving Party may acquire information similar to Confidential Information from a third party.

Example: For the purposes of this Agreement, the term "Confidential Information" shall mean all trade secrets and confidential or proprietary information (and any tangible representation thereof) owned, possessed or used in connection with The Company Business or by the Buyer Parties and its Affiliates; provided, however, that "Confidential Information" does not include information which is or becomes generally available to the public other than as a result of a disclosure by a Seller Party..

Task name: contract_nli_sharing_with_employees

Table 21 – continued from previous page

Task

Question: Identify if the clause provides that the Receiving Party may share some Confidential Information with some of Receiving Party’s employees.

Example: We and our representatives will keep the Evaluation Materials completely confidential; provided, however, that (i) any of such information may be disclosed to those of our directors, officers, employees, agents, representatives (including attorneys, accountants and financial advisors), lenders and other sources of financing (collectively, "our representatives") who we reasonably determine need to know such information for the purpose of evaluating a Possible Transaction between us and the Company (it being understood that our representatives shall be informed by us of the confidential nature of such information and shall be directed by us, and shall each agree to treat such information confidentially) and

Task name: contract_nli_limited_use

Question: Identify if the clause provides that the Receiving Party shall not use any Confidential Information for any purpose other than the purposes stated in Agreement.

Example: 2.1. A Receiving Party agrees: 2.1.2. to use the Confidential Information of the other solely in, and to the extent necessary for the Purpose and not to copy or use any Confidential Information of the other save to the extent necessary for the Purpose;

1301 **Significance and value** The Contract NLI tasks evaluate an LLM’s capacity to reason over the
1302 rights and obligations created by a contract. The ability to perform this skill is essential to many types
1303 of legal work.

1304 **G.7 Corporate Lobbying**

1305 In LEGALBENCH, the Corporate Lobbying task is denoted as `corporate_lobbying`.

1306 **Background** A significant amount of effort is devoted to identifying developing sources of law
1307 which implicate client or issue interests. Examples of such sources include: legislative bills, proposed
1308 regulations, or in-progress litigation. Identifying these sources serves multiple purposes. From a
1309 scholarly standpoint, researchers often aggregate sources into issue-focused databases, enabling them
1310 to identify emerging trends or patterns across different sources [17]. From an advocacy standpoint,
1311 identifying sources allows affected groups to better understand how their rights or obligations may be
1312 affected, and how to focus efforts on interacting with courts, legislatures, and other governmental
1313 bodies [10, 43, 20].

1314 **Task** The Corporate Lobbying task requires an LLM to determine whether a proposed Congress-
1315 sional bill may be relevant to a company based on a company’s self-description in its SEC 10K filing.
1316 The following information about a bill and a company are available:

- 1317 • The title of the bill.
- 1318 • A summary of the bill.
- 1319 • The name of the company.
- 1320 • A description of the company.

1321 We expect higher accuracy of LLM predictions if we were to provide the model with more data about
1322 a bill, and especially if we provide it with more data about a company. Proprietary applications of
1323 this approach could leverage significant internal company data. More expensive deployments could
1324 leverage the full text of the bill

1325 **Construction Process** This data was manually labeled. This work was an extension of the research
1326 described in [44].

1327 **Significance and Value** Determining whether a particular bill is relevant for a company requires
1328 (1) identifying the legal consequences of the bill, and (2) whether those consequences are relevant to
1329 a company’s business model, structure, or activities. As discuss above, this type of prognostication is
1330 a common legal practice. For instance, law firms regularly publish “client alerts” which seek to keep
1331 clients updated on new legal developments [54].

Class	Number of samples
No	345
Yes	145

Table 22: Test set class distribution

Field	Text
Bill Title	A bill to provide standards relating to airline travel by Federal employees for official business.
Bill Summary	Fly Smart Act This bill establishes standards for airline travel by federal employees for official business, including a general requirement to use coach-class accommodations and a ban on military aircraft for domestic official travel. It allows use of first-class and business class for federal employees under certain circumstances, such as to accommodate a disability or special need or because of exceptional security circumstances
Company Name	Alaska Air Group, Inc.
Company Description	Virgin America has been a member of Air Group since it was acquired in 2016. In 2018, Virgin America and Alaska combined operating certificates to become a single airline, and legally merged into a single entity. The Company also includes McGee Air Services, an aviation services provider that was established as a wholly-owned subsidiary of Alaska in 2016. Together with our regional partner airlines, we fly to 115 destinations with over 1,200 daily departures through an expansive network across the United States, Mexico, Canada, and Costa Rica. With global airline partners, we provide our guests with a network of more than 900 destinations worldwide. Our adjusted net income was \$554 million, which excludes merger-related costs, special items and mark-to-market fuel hedge adjustments. Refer to "Results of Operations" in Management's Discussion and Analysis for our reconciliation of Non-GAAP measures to the most directly comparable GAAP measure. Mainline - includes scheduled air transportation on Alaska's Boeing or Airbus jet aircraft for passengers and cargo throughout the U.S., and in parts of Canada, Mexico, and Costa Rica. other third-party carriers' scheduled air transportation for passengers across a shorter distance network within the U.S. under capacity purchase agreements (CPA). Horizon - includes the capacity sold to Alaska under CPA. Expenses include those typically borne by regional airlines such as crew costs, ownership costs and maintenance costs. We believe our success depends on our ability to provide safe air transportation, develop relationships with guests by providing exceptional customer service and low fares, and maintain a low cost structure to compete effectively. In 2018 , we focused much of our energy on the integration of Virgin America, completing over 95% of our integration milestones. In January 2018, Alaska and Virgin America received a Single Operating Certificate (SOC) from the Federal Aviation Administration (FAA), which recognizes Alaska and Virgin America as one airline. In April 2018, we transitioned to a single Passenger Service System (PSS), which allows us to provide one reservation system, one website and one inventory of flights to our guests. This transition to a single PSS enables us to unlock many of the revenue synergies expected from the acquisition, and to provide consistent branding to our guests at all airport gates, ticketing, and check-in areas. The two most important milestones we have yet to complete include combining the maintenance operations of Boeing and Airbus, and reconfiguring our Airbus fleet. In 2018 , we painted 33 Airbus aircraft with the Alaska livery and we are in process of reconfiguring all Airbus aircraft to achieve a cabin experience for our guests that is consistent with our Boeing fleet. In early 2019, we will also complete the integration of our crew management systems and aim to reach a collective bargaining agreement with our aircraft technicians, the last remaining labor group that has not yet reached a joint collective bargaining agreement. With the integration largely behind us, we remain committed to our vision to become the favorite airline for people on the West Coast. The acquisition of Virgin America positioned us as the fifth largest airline in the U.S., with an unparalleled ability to serve West Coast travelers. ' evolving needs by offering a relevant network and schedule, upgrading our onboard offerings, and retaining our unique West Coast vibe. Some of the more notable product enhancements underway include adding high-speed satellite connectivity to our entire Boeing and Airbus fleets, updating and expanding our airport lounges, and working with the Port of Seattle to open a state-of-the-art 20-gate North Satellite Concourse 4 at Sea-Tac Airport, including a 15,000 square-foot flagship lounge. We have also introduced new food and beverage menus, which include more fresh, local, and healthy offerings including salads, protein plates, and fresh snacks, as well as new beverage offerings, including craft beers, juices and an updated wine selection. We are also active in the communities we serve and strive to be an industry leader in environmental and community stewardship.

Table 23: An example of a relevant bill for the corporate_lobbying task.

1332 **G.8 Definition Tasks**

1333 In LEGALBENCH, the Definition tasks are denoted as `definition_classification` and
1334 `definition_extraction`.

1335 **Background** Judicial opinions regularly involve *definition*, assigning a particular meaning to words
1336 or phrases (Let us define words and phrases as “terms”). Definition of terms can occur when judges
1337 introduce or discuss legal concepts (e.g. *parol evidence*), and it frequently occurs when judges
1338 interpret terms in legal texts. This can include language from past judicial opinions and language
1339 appearing in legal texts like contracts, statutes, and the Constitution. Historically, interpreters have
1340 often evaluated the definition(s) of individual words. For example, in interpreting the meaning of
1341 “keep and bear arms” in the Second Amendment, courts consider the definition(s) of individual words
1342 (like “bear”). This approach—focusing on terms’ definitions—has only increased in recent decades
1343 with the rise of textualist approaches to constitutional and statutory interpretation.

1344 Judicial opinions define a wide range of terms, including ordinary terms, legal terms, and scientific
1345 terms. They also appeal to a wide range of defining sources, including ordinary dictionaries, legal
1346 dictionaries, and legal texts. For an example of the last, consider statutory definitions: 1 U.S.C. 1
1347 offers generally applicable definitions of many frequent statutory terms.

1348 It is useful for lawyers to identify *when definition occurs* (definition classification), as well as *which*
1349 *terms* have been defined (definition extraction). These tasks might seem simple at first. There are
1350 some intuitively plausible indicators of definition classification and extraction. For example, defined
1351 terms often (but not always) appear in quotation marks or near a citation to a dictionary.

1352 However, these tasks are not entirely straightforward. Indicators like quotation will not lead to perfect
1353 definition classification and extraction. Consider for example, this sentence from the dataset related
1354 to the definition of “confidential”: *The term “confidential” meant then, as it does now, “private” or*
1355 *“secret.” Webster’s Seventh New Collegiate Dictionary 174 (1963).*⁹ As another example from the
1356 dataset, consider this definition of “brought”: *But a natural reading of § 27’s text does not extend so*
1357 *far. “Brought” in this context means “commenced,” Black’s Law Dictionary 254 (3d ed. 1933).*¹⁰
1358 Other examples exclusively quote the definition, rather than defined terms: *Stare decisis (“to stand*
1359 *by things decided”) is the legal term for fidelity to precedent. Black’s Law Dictionary 1696 (11th*
1360 *ed. 2019).*¹¹ In all of these examples, the presence of a dictionary would not indicate which term is
1361 extracted. In other examples, there is no dictionary cited; there is not a perfect correlation between
1362 dictionary citation and classification of a sentence as a defining one.¹²

1363 **Tasks** The Definition Classification task requires an LLM to determine—given an excerpt from a
1364 Supreme Court opinion—whether the excerpt is defining any term (Yes/No). The Definition Extraction
1365 task requires an LLM to determine—given an excerpt from a Supreme Court opinion—which term the
1366 excerpt is defining (Open-ended response).

1367 **Construction process** An original hand-coded dataset was constructed to study how the Supreme
1368 Court relies on dictionaries over time. Any case citing a dictionary was included in the dataset, and
1369 human coders identified relevant excerpts that defined terms and *which* terms were defined.

1370 That dataset has been repurposed for the task here. For the definition extraction task, the original
1371 dataset includes the relevant information (excerpts, with the defined term coded separately).

1372 For the definition classification task, the original dataset includes examples of language defining terms.
1373 To create a set of non-defining language, Neel Guha randomly selected similarly long excerpts of
1374 text from the same Supreme Court opinions. Kevin Tobia analyzed those randomly selected excerpts,
1375 identifying any that include definitions (for removal). The resulting dataset has 691 sentences which
1376 define sentences, and 646 sentences which do not.

1377 **Significance and value** This is not a particularly difficult task for human lawyers, and it is unlikely
1378 that LLMs would replace lawyers as experts in this process. However, it is possible that LLMs

⁹Food Mktg. Inst. v. Argus Leader Media, 139 S. Ct. 2356, 2363 (2019).

¹²E.g. “And “remuneration” means “a quid pro quo,” “recompense” or “reward” for such services. Id., at 1528.” BNSF Ry. Co. v. Loos, 139 S. Ct. 893, 905 (2019).

Sentence	Definition sentence?
The risk of that consequence ought to tell us that something is very wrong with the Court’s analysis.	No
This term has long referred to a class of expenses commonly recovered in litigation to which attorney’s fees did not traditionally belong. See Black’s Law Dictionary 461 (1891) (defining “expensae litis” to mean “generally allowed” costs); 1 J. Bouvier, Law Dictionary 392 (1839) (defining the term to mean the “costs which are generally allowed to the successful party”); id., at 244 (excluding from the definition of “costs” the “extraordinary fees [a party] may have paid counsel”).	Yes

Table 24: Examples for definition_classification

Sentence	Defined term
The term “plaintiff” is among the most commonly understood of legal terms of art: It means a “party who brings a civil suit in a court of law.” Black’s Law Dictionary 1267 (9th ed. 2009) see also Webster’s Third New International Dictionary 1729 (1961)”	plaintiff
The ordinary understanding of law enforcement includes not just the investigation and prosecution of offenses that have already been committed, but also proactive steps designed to prevent criminal activity and to maintain security.	law enforcement

Table 25: Examples for definition_extraction

1379 successful in these tasks could provide beneficial legal research roles (e.g. quickly identifying all
1380 prior definitions of a specific term in a particular jurisdiction).

1381 Moreover, the definition extraction task serves as a useful test of LLMs abilities, given the task’s
1382 open-ended nature. The task is not limited to a small set of possible answers (e.g. Yes, No). Rather, it
1383 requires identifying which term of all terms in an excerpt is defined. Most of these choices will admit
1384 of over ten possible answers (i.e. excerpts of over ten words). Moreover, there is great variety in the
1385 language used across the examples. There are hundreds of possible answers, across all items.

1386 **G.9 Diversity Jurisdiction**

1387 In LEGALBENCH, the Diversity Jurisdiction tasks are denoted as `diversity_*`.

1388 **Background** Diversity jurisdiction is one of two ways in which a federal court may have jurisdiction
1389 over a lawsuit pertaining to state law. Diversity jurisdiction exists when there is (1) complete diversity
1390 between plaintiffs and defendants, and (2) the amount-in-controversy (AiC) is greater than \$75,000.

1391 “Complete diversity” requires that there is no pair of plaintiff and defendant that are citizens of the
1392 same state. However, it is acceptable for multiple plaintiffs to be from the same state, or for multiple
1393 defendants to be from the same state.

1394 The AiC requirement allows for certain forms of aggregation. Specifically, if plaintiff **A** asserts
1395 two independent claims against defendant **B**, the value of the claims may be added together when
1396 considering if the AiC requirement is met. However, a plaintiff may not aggregate the value of
1397 claims against two separate defendants, and two plaintiffs may not aggregate claims against the same
1398 defendant.

1399 **Tasks** We define six different tasks, each of which tests the diversity jurisdiction rule under a
1400 different pattern of facts. The diversity jurisdiction tasks are:

- 1401 • `diversity_1`: The fact patterns consists of one plaintiff, one defendant, and one claim per
1402 plaintiff-defendant pair.
- 1403 • `diversity_2`: The fact patterns consists of one plaintiff, two defendants, and one claim per
1404 plaintiff-defendant pair.
- 1405 • `diversity_3`: The fact patterns consists of one plaintiff, one defendant, and two claims per
1406 plaintiff-defendant pair.
- 1407 • `diversity_4`: The fact patterns consists of two plaintiffs, one defendant, and one claim per
1408 plaintiff-defendant pair.
- 1409 • `diversity_5`: The fact patterns consists of two plaintiffs, one defendant, and two claims per
1410 plaintiff-defendant pair.
- 1411 • `diversity_6`: The fact patterns consists of two plaintiffs, two defendants, and two claims per
1412 plaintiff-defendant pair.

1413 **Construction process** We programmatically construct a dataset to test the diversity jurisdiction.
1414 We generate randomness over the names of the parties, the claims, and the amounts.

1415 **Significance and value** It is extremely unlikely LLMs would ever be used to evaluate diversity
1416 jurisdiction in practical settings. However, because the task is considered extremely simplistic—and
1417 one that first year law students are expected to perform perfectly—it offers a useful evaluation
1418 benchmark for LLMs. The structure of the task is potentially non-trivial for LLMs, as it requires
1419 identifying the relationships between parties (i.e., who are plaintiffs and defendants), understanding
1420 which claims may be aggregated, and computing whether the aggregated amounts meet the AiC
1421 requirement.

Task	Facts	Diversity Jurisdiction?
diversity_1	Oliver is from Oregon. William is from Oregon. Oliver sues William for defamation for \$3,000.	No
diversity_1	James is from South Dakota. Sophia is from Virginia. James sues Sophia for negligence for \$9,010,000.	Yes
diversity_2	Benjamin is from South Carolina. Amelia is from Indiana. Mia is from South Carolina. Benjamin sues Amelia and Mia each for wrongful eviction for \$22,000.	No
diversity_2	James is from Colorado. Elijah is from West Virginia. Theodore is from Washington. James sues Elijah and Theodore each for negligence for \$2,864,000.	Yes
diversity_3	Ava is from Rhode Island. Theodore is from Rhode Island. Ava sues Theodore for securities fraud for \$70,000 and trespass for \$6,000.	No
diversity_3	Charlotte is from Colorado. Harper is from Oklahoma. Charlotte sues Harper for breach of contract for \$74,000 and securities fraud for \$88,000.	Yes
diversity_4	Harper is from New Jersey. Benjamin is from Colorado. Isabella is from Colorado. Harper and Benjamin both sue Isabella for breach of contract for \$6,165,000.	No
diversity_4	Noah is from Indiana. Sophia is from West Virginia. Benjamin is from Montana. Noah and Sophia both sue Benjamin for defamation for \$3,996,000.	Yes
diversity_5	Noah is from Idaho. Elijah is from Connecticut. Theodore is from Wyoming. Noah and Elijah both sue Theodore for medical malpractice for \$57,000 and legal malpractice for \$16,000.	No
diversity_5	Charlotte is from Oregon. Mia is from Virginia. Elijah is from Tennessee. Charlotte and Mia both sue Elijah for trademark infringement for \$57,000 and medical malpractice for \$20,000.	Yes
diversity_6	Lucas is from South Dakota. Amelia is from New Hampshire. Benjamin is from South Dakota. Benjamin is from South Dakota. Lucas and Amelia both sue Benjamin for negligence for \$16,000 and wrongful eviction for \$76,000. Lucas and Amelia both sue Olivia for medical malpractice for \$3,000 and breach of contract for \$76,000.	No
diversity_6	Emma is from Kansas. Noah is from Delaware. Elijah is from South Dakota. Elijah is from New Jersey. Emma and Noah both sue Elijah for trademark infringement for \$4,000 and trespass for \$85,000. Emma and Noah both sue Liam for negligence for \$10,000 and defamation for \$67,000.	Yes

Table 26: Examples for diversity tasks

1422 **G.10 Function of Decision Section**

1423 In LEGALBENCH, the Function of Decision Section task is denoted as `function_of_decision_`
1424 `section`.

1425 **Background** In common-law legal systems, written judicial decisions serve two functions. First,
1426 they resolve the dispute that litigants brought before the court and explain the reason for the court’s
1427 decision. Second, they become new law, binding on future parties and future courts should another
1428 case arise that presents sufficiently similar facts.

1429 Because judicial decisions not only describe the law, but are themselves the law, lawyers in common-
1430 law legal systems must be able to read and digest case law to extract key legal principles and apply
1431 those principles to their own cases. This skill takes time and practice to develop.

1432 Importantly, not every word in a judicial decision is binding, only the facts and reasoning that were
1433 required for the court to reach its decision. Thus, lawyers must distinguish important from trivial
1434 facts across numerous past decisions before they can conclude what the law on a particular issue is.
1435 One of the most foundational case-reading skills is the ability to review a legal decision and identify
1436 the function that each section of the decision serves. In the American legal education system, this
1437 skill is taught beginning in the first year of law school, often by encouraging students to identify the
1438 function of each section of a decision. A typical classification scheme is as follows:

- 1439 ● **Facts:** A section of the decision that recounts the historical events and interactions between
1440 the parties that gave rise to the dispute.
- 1441 ● **Procedural History:** A section of the decision that describes the parties’ prior legal filings
1442 and prior court decisions that led up to the issue to be resolved by the decision.
- 1443 ● **Issue:** A section of the decision that describes a legal or factual issue to be considered by
1444 the court.
- 1445 ● **Rule:** A section of the decision that states a legal rule relevant to resolution of the case.
- 1446 ● **Analysis:** A section of the decision that evaluates an issue before the court by applying
1447 governing legal principles to the facts of the case
- 1448 ● **Conclusion:** A section of the decision that articulates the court’s conclusion regarding a
1449 question presented to it.
- 1450 ● **Decree:** A section of the decision that announces and effectuates the court’s resolution of
1451 the parties’ dispute, for example, granting or denying a party’s motion or affirming, vacating,
1452 reversing, or remanding a lower court’s decision.

1453 Identifying the function of sections within judicial decisions is a fundamental skill for lawyers in
1454 common-law legal systems. Without it, precedent-based legal reasoning would be impossible.

1455 **Task** The Function of Decision Sections task requires an LLM to determine—given a one-paragraph
1456 excerpt of a legal decision—which of the seven functions above that paragraph serves in the context of
1457 the entire decision.

1458 **Construction process** We created a dataset of paragraphs from legal decisions, classified into one
1459 of the seven functions above. Paragraphs were taken from decisions in West Publishing’s fourth
1460 Federal Reporter series, which publishes the decisions of the United States Courts of Appeals. To
1461 avoid selection bias and achieve a degree of randomness, paragraphs were selected from sequential
1462 decisions, in the order they appeared, spanning all areas of civil and criminal law that fall within the
1463 jurisdiction of the federal courts.

1464 **Significance and value** Beginning law students may initially have trouble identifying the function
1465 of a particular section within a judicial opinion, but it quickly becomes a simple task. LLMs would
1466 not be called on to perform this task in the actual practice of law, but because it is a foundational legal
1467 reasoning skill, it provides a useful measure of reasoning progress for LLMs.

Excerpt	Function
The Commission’s notice and orders, however, are to the contrary. From the very outset, the Commission has made clear that the Governance Order was no more than a call for a proposal that would then be subject to further notice, comment, and revision.	Analysis
Donna and Hurley contend that the Supreme Court’s decision in <i>Honeycutt v. United States</i> , — U.S. —, 137 S. Ct. 1626, 198 L.Ed.2d 73 (2017), should be applied retroactively to invalidate the forfeiture judgments against them.	Conclusion
For the reasons stated, we affirm the district court’s judgment.	Decree
“The Game of Life” is a classic family board game, introduced in 1960 by the Milton Bradley Company to great success. This case involves a long-running dispute between Rueben Klamer, a toy developer who came up with the initial concept of the game, and Bill Markham, a game designer whom Klamer approached to design and create the actual game prototype. Eventually, their dispute (which now involves various assignees, heirs, and successors-in-interest) reduced to one primary issue: whether the game qualified as a “work for hire” under the Copyright Act of 1909. If it did, Markham’s successors-in-interest would not possess the termination rights that would allow them to reassert control over the copyright in the game. After considering the evidence produced at a bench trial, the district court concluded that the game was, indeed, such a work. Plaintiff-appellants, who all trace their interest in the game to Markham, challenge that determination. We affirm.	Facts
Officers of the Puerto Rico Police Department watched Julio Casiano-Santana (“Casiano”) engage in a drug deal. They arrested him, recovering a loaded pistol and three bags of crack cocaine from the scene. Casiano was charged with possession of a firearm in furtherance of a drug trafficking crime, 18 U.S.C. § 924(c)(1)(A)(i), two counts of possession with intent to distribute controlled substances, 21 U.S.C. § 841(a)(1) and (b)(1)(C), and possession of a firearm by a convicted felon, 18 U.S.C. § 922(g)(1).	Issue
On remand, the district court held a new sentencing hearing, in which Lawrence allocuted. Resentencing Transcript at 11–12, <i>United States v. Lawrence</i> , No. 03-cr-00092-CKK (D.D.C. Oct. 5, 2009), ECF No. 103. Lawrence told the court that, while incarcerated, he had “been trying to do the right things as far as * * * becoming a man so I can provide for my son, he’s 11 and very big.” <i>Id.</i> Lawrence’s mother was “getting old” and does “the best that she can[,]” but his son had “health issues as far as * * * weight gain and a lot of other things.” <i>Id.</i> at 12. Lawrence explained that he “just want[ed] a chance to be a father” to his son, and that he “was just hoping that it’s possible that * * * I can get out in his life before * * * the streets * * * or anything that maybe I have done affect him[.]” <i>Id.</i> He said he wanted to “be a productive citizen[,]” and noted that he “read the Bible” and “attended church, school, [and] college.” <i>Id.</i> He admitted that he had “gotten into some altercations,” but “not because I wanted to, but it’s prison, and you know, there’s all types of people in prison.” <i>Id.</i> While “making no excuses” for his actions, he said he “was just hoping the Court would have leniency” in his “particular case.” <i>Id.</i>	Procedural History
The border between interpretation and bare consultation can be hazy and, therefore, “difficult to plot.” <i>Lawless</i> , 894 F.3d at 18 (citing <i>Livadas</i> , 512 U.S. at 124 n.18, 114 S.Ct. 2068). This case, however, does not closely approach the border: on their face, Rose’s state-law claims require more than bare consultation of the CBA. They substantially depend on construing the terms of the agreement (the CBA) that RTN and the Union negotiated. We explain briefly.	Rule

1468 **G.11 Hearsay**

1469 In LEGALBENCH, the hearsay task is denoted as `hearsay`.

1470 **Background** The Federal Rules of Evidence dictate that “hearsay” evidence is inadmissible at
1471 trial. Hearsay is defined as an “out-of-court statement introduced to prove the truth of the matter
1472 asserted.” In determining whether a piece of evidence meets the definition of hearsay, lawyers ask
1473 three questions:

- 1474 1. Was there a statement? The definition of statement is broad, and includes oral assertions,
1475 written assertions, and non-verbal conduct intended to communicate (i.e. *assert*) a message.
1476 Thus, for the purposes of the hearsay rule, letters, verbal statements, and pointing all count
1477 as statements.
- 1478 2. Was it made outside of court? Statements not made during the trial or hearing in question
1479 count as being out-of-court.
- 1480 3. Is it being introduced to prove the truth of the matter asserted? A statement is introduced
1481 to prove the truth of the matter asserted if its truthfulness is essential to the purpose of its
1482 introduction. Suppose that at trial, the parties were litigating whether Alex was a soccer
1483 fan. Evidence that Alex told his brother “I like soccer,” would be objectionable on hearsay
1484 grounds, as (1) the statement itself asserts that Alex likes soccer, and (2) the purpose
1485 of introducing this statement is to prove/disprove that Alex likes soccer. In short, the
1486 truthfulness of the statement’s assertion is central to the issue being litigated. However,
1487 consider if one of the parties wished to introduce evidence that Alex told his brother, “Real
1488 Madrid is the greatest soccer team in the world.” This statement would **not** be hearsay. It’s
1489 assertion—that Real Madrid is the greatest soccer team in the world—is unrelated to the
1490 issue being litigated. Here, one party is introducing the statement not to prove what the
1491 statement says, but to instead show that a particular party (i.e. Alex) was the speaker of the
1492 statement.

1493 **Task** Given a legal issue and a piece of prospective evidence, the LLM must determine whether the
1494 evidence constitutes hearsay under the above test.

1495 We note that in practice, many pieces of evidence which are hearsay are nonetheless still admissible
1496 under one of the many hearsay exception rules. We ignore these exceptions for our purposes, and
1497 leave the construction of benchmarks corresponding to these exceptions for future work.

1498 **Construction process** We create the hearsay dataset by hand, drawing inspiration from similar
1499 exercises available in legal casebooks and online resources. The dataset consists of 5 slices, where
1500 each slice tests a different aspect of the hearsay rule. We randomly select 1 sample from each slice to
1501 be in the train set. The remainder of the slice constitutes the test set (for a total of 95 samples). The
1502 slices (with test set counts) are:

- 1503 • Statement made in court ($n = 14$): Fact patterns where the statement in question is made
1504 during the course of testimony at trial. Thus, the statement is not hearsay.
- 1505 • Non-assertive conduct ($n = 19$): Fact patterns where the evidence does not correspond to a
1506 statement. Hence, the hearsay rule is inapplicable.
- 1507 • Standard hearsay ($n = 29$): Fact patterns where there is an oral statement, it is said out of
1508 court, and it is introduced to prove the truth of the matter asserted. Thus, these fact patterns
1509 correspond to hearsay.
- 1510 • Non-verbal hearsay ($n = 14$): Fact patterns where the statement is hearsay, but made in
1511 writing or through assertive conduct (e.g. pointing).
- 1512 • Not introduced to prove truth ($n = 19$): Fact patterns where an out-of-court statement is
1513 introduced to prove something other than what it asserts.

1514 **Significance and value** The hearsay rule is commonly taught in law school as part of Evidence.
1515 Law students are expected to understand the rule, and how to apply it. The hearsay task is interesting
1516 for LLM evaluation because it emphasizes multi-step reasoning—the test for hearsay encompasses
1517 several different steps, where each step differs in difficulty. These include:

- 1518 • Event detection: The LLM must determine whether the fact pattern mentions a statement
1519 being made.
- 1520 • Spatial reasoning: The LLM must determine whether the statement was made inside a court
1521 room.
- 1522 • Argument extraction: The LLM must determine what the statement is asserting.
- 1523 • Argument relevance: The LLM must finely determine whether the assertion is relevant to
1524 the issue being litigated.

Facts	Hearsay?
On the issue of whether Will knew that the company intended to announce its drug trials had been cancelled, the fact that he told the jury that "he didn't know the first thing about how medicines worked."	No
On the issue of whether Gerald was alive immediately after being attacked by Kathryn, Gerald's statement, "I was attacked by Kathryn."	No
On the issue of whether Susan was familiar with Shakespeare, the fact that she had once played the role of Macbeth and recieved a standing ovation after her monologue.	No
To prove that the insured under a life policy is dead, his wife offers a death certificate.	Yes
On the issue of whether Albert bought a knife, Angela testified that he shook his head when she asked him.	Yes
On the issue of whether the brakes were faulty, Amy testifies that she heard Arthur claim that he thought something was wrong with the car.	Yes

Table 29: Examples for hearsay

1525 **G.12 Insurance Policy Interpretation**

1526 In LEGALBENCH, the Insurance Policy Interpretation task is denoted as `insurance_policy_`
1527 `interpretation`.

1528 **Background** Insurance disputes often arise when parties disagree on whether a claim is covered
1529 under a certain insurance policy. To study such disagreements in interpretation, researchers at
1530 Stanford recruited crowdsource workers to review a pair of an insurance policy and a claim and
1531 respond whether they believe the claim is covered. A policy-claim pair whose applicability the
1532 workers disagree with each other on suggests ambiguity in the policy text.

1533 **Task** The Insurance Interpretation task requires an LLM to review a pair of an insurance policy and
1534 a claim and determine whether the policy clearly covers the claim, clearly does not cover it, or if it is
1535 unclear whether it covers it or not.

1536 **Construction process** The clause-claim pairs are manually constructed before being reviewed by
1537 crowdsource workers [65]. To convert the numbers of Covered/Not_Covered/Can't_Decide responses
1538 to discrete labels, we first calculate the 95% multinomial confidence interval of the proportion of
1539 each response. We then choose the label for which the confidence interval lower bound is greater
1540 than or equal to .5. If no label has a lower bound $\geq .5$, we classify the policy-claim pair as "It's
1541 ambiguous." This conversion process ensures that individual crowdsource workers do not arbitrarily
1542 sway the labels. Examples for each label can be found in Table 30.

Policy: Harper’s insurance covers damage from “House Removal,” which includes “damage to belongings that occurs while being stored by professional removal contractors.”

Claim: Harper is moving to a new home on the other side of town. Because her old home has already sold and her new home is not yet ready for her to move in, she checks into a hotel and asks a professional moving company to store some of her belongings at the company warehouse. A couple days before she is set to move in, the warehouse floods, which ruins the items that the movers were storing for Harper. Harper files a claim with her insurance company for the damage to her belongings.

Label: Covered

Policy: Denise’s insurance covers damage from “House Removal,” defined as “damage to belongings caused while being removed by professional removal contractors from the home.”

Claim: Denise is moving to a new home on the other side of town. She asks her uncle, a retired professional mover, to help move her belongings out of her current home. During the move, her uncle’s truck is involved in a minor accident that damages several pieces of her furniture and other belongings. Denise files a claim with her insurance company for the damage to her belongings.

Label: Not Covered

Policy: Jason has insurance coverage against loss and damage from “Identity Theft,” which excludes “identity theft connected with the policyholder’s business.”

Claim: Jason is a successful car salesman. One day, while Jason is at home, hackers manage to infiltrate Jason’s home WiFi network. The hackers steal Jason’s social security number and open a number of fraudulent lines of credit in his name. To resolve the fraud, Jason must spend thousands of dollars in legal fees. Jason files a claim with his insurance company for his losses.

Label: It’s ambiguous.

Table 30: Examples for `insurance_interpretation`.

1543 **Significance and value** The ability to determine whether an insurance claim is covered under a
1544 given policy can significantly reduce claim processing time. It can also shine light on potential
1545 ambiguity in existing policies. Additionally, this task represents one of the rare benchmarks where an
1546 LLM is required to predict laypeople’s legal interpretations, as we retrieve the ground truth labels
1547 based on crowdsourced responses.

1548 **G.13 International Citizenship Questions**

1549 In LEGALBENCH, the International Citizenship Questions task is denoted as `international_`
 1550 `citizenship_questions`.

1551 **Background** The GLOBALCIT Citizenship Law Dataset is a valuable resource that comprehen-
 1552 sively categorizes citizenship acquisition and loss methods in 190 countries. It enables cross-country
 1553 comparisons and offers insights into global trends in citizenship laws and examines 28 different
 1554 ways in which citizenship can be acquired, as well as 15 ways laws allow citizenship to be lost. The
 1555 original dataset is formulated as a tabular survey dataset. We change this survey format into Yes/No
 1556 questions about specific countries and their laws as of 2020 resulting in 9300 question- answer pairs.

1557 **Task** The model must answer yes/no questions about global citizenship law.

Question	Answer
Consider the country of Central African Republic. Does the country provide for acquisition of citizenship by a person who is in the public service (including military service) and, if so, under which conditions?	No
Consider the country of Bolivia. Does the country provide for involuntary loss of citizenship by a person who is adopted by or in legal guardianship of a citizen of another country and, if so, under which conditions?	No
Consider the country of Denmark. Which residence conditions does the country provide for residence-based acquisition?	Yes
Consider the country of Germany. Does the country require the demonstration of civic knowledge or cultural integration for residence-based acquisition?	Yes

Table 31: Examples for `international_citizenship_questions`

1558 **Contraction process** We download the GLOBALCIT Citizenship Law Dataset [63] and craft a
 1559 script that converts the tabular survey data into yes/no questions, appending information about the
 1560 country and the time at which the survey was created.

1561 **Significance and value** Understanding knowledge about the law globally is important to evaluate.
 1562 To successfully answer legal reasoning questions globally language models must be able to retrieve a
 1563 rule and then reason about it.

1564 **G.14 Learned Hand Tasks**

1565 In LEGALBENCH, the Learned Hand tasks are denoted as `learned_hand_*`.

1566 **Background** A person may experience problems in many areas of their lives – their family, work,
1567 finances, housing, education, driving, and more – which legal professionals would recognize as being
1568 ‘legal issues’. The person may not know that a problem with a credit card company, a landlord, a
1569 spouse, or an employer is a ‘legal issue’, or what terminology or categorization a lawyer would use to
1570 make sense of it.

1571 The designation of a legal issue means that a person may benefit from getting specialized guidance
1572 from a legal professional to resolve this problem because they can guide them on their rights, liabilities,
1573 possible options, procedures, and specialized legal tasks. Not all people may want to pursue legal
1574 services to resolve a legal issue. But legal issue-spotting can help them both make sense of the
1575 problem they are experiencing, and what services and laws might be available if they wish to make
1576 use of them.

1577 Legal professionals typically carry out issue-spotting during an intake process. They receive a
1578 person’s verbal or written description of the situation they are in. Then the professional identifies
1579 the main legal issues that are apparent in this situation, starting at the main top-level categories and
1580 then sometimes proceeding to identify more specific sub-categories of legal issues. For example, the
1581 professional may identify that a person’s situation involves a legal issue with the top-level category of
1582 ‘housing’ and specific sub-categories of ‘possible eviction for non-payment of rent’ and ‘poor living
1583 conditions of their rental’.

1584 The professional may identify multiple overlapping legal issue categories in one situation. For
1585 example, the professional may identify that a person has a housing law issue and a family law issue
1586 if their landlord is threatening to evict them because of the police being called to the rental home
1587 because of a domestic violence incident.

1588 The main categories of legal issues that professionals would identify in people’s situations are:

- 1589 • **Benefits:** A situation would have a benefits issue if it involves the person attempting to
1590 resolve a problem with applying for, receiving, or discontinuing public benefits and social
1591 services from the government. This could include benefits that support them regarding food,
1592 disability, old age, housing, health, unemployment, child care, or other social needs.
- 1593 • **Business:** A situation would have a business issue if the person is running a small business
1594 or nonprofit, and encounters a problem around incorporation, licenses, taxes, regulations,
1595 bankruptcies, or natural disasters. This category is not meant to apply to larger corporate
1596 legal issues, but rather the kinds of business problems that an individual might bring to a
1597 legal professional for help.
- 1598 • **Consumer:** A situation would have a consumer legal issue if the person was dealing with
1599 problems around debt and money, insurance, consumer goods and contracts, taxes, or small
1600 claims about the quality of service.
- 1601 • **Courts:** A situation would be categorized as a courts issue if the person is dealing with
1602 a problem around how to interact with the court system or with lawyers more broadly.
1603 This may involve the person attempting to follow legal procedures, court rules, or filing
1604 requirements, or it may involve them attempting to hire, manage, or address lawyers.
- 1605 • **Crime:** A situation would have a crimes issue if the person is dealing with the criminal
1606 justice system as a defendant, victim, or family member. They may be experiencing problems
1607 around being investigated, searched, or charged with a crime, or going to a criminal trial
1608 and prison, or being a victim of a crime.
- 1609 • **Divorce:** A situation would be categorized as a divorce issue if a person is dealing with a
1610 separation, divorce, or annulment while splitting with a spouse or partner. The problem may
1611 involve separation, spousal support, splitting money and property, child support, visitation,
1612 or following the related court process.
- 1613 • **Domestic Violence:** A situation would have a domestic violence issue if the person is
1614 dealing with abuse with a partner, family member, or other intimate acquaintance. The
1615 situation may involve understanding rights and laws related to domestic violence, getting

1616 protective orders, enforcing them, reporting abuse, and dealing with collateral consequences
1617 to housing, finances, employment, immigration, and education.

1618 ● **Education:** A situation has an education issue if the person is dealing with a problem around
1619 school for themselves or a family member. The situation may involve accommodations for
1620 special needs, discrimination, student debt, discipline, or other issues in education.

1621 ● **Employment:** A situation would be identified as having an employment issue if the person
1622 has a problem with a job, including during the application process, during the job, or
1623 after ending employment. Problems may include discrimination, harassment, payment,
1624 unionizing, pensions, termination, drug testing, background checks, worker's compensation,
1625 classification as a contractor, or more.

1626 ● **Estates:** A situation would have an estates issue if a person is dealing with an estate, wills,
1627 or guardianship. This may include issues around end-of-life planning, health and financial
1628 directives, trusts, guardianships, conservatorships, and other estate issues that people and
1629 family deal with.

1630 ● **Family:** A situation would have a family law issue if a person is dealing with an issue
1631 involving a family member. This may include issues around divorce, child custody, domestic
1632 violence, adoption, paternity, name change, and other family issues.

1633 ● **Health:** A situation would be categorized as a health law issue if the person is dealing with
1634 problems around accessing health services or protecting their rights in medical settings. This
1635 may involve problems with accessing health care, paying for care, getting public benefits for
1636 care, privacy of medical records, problems with quality of care, or other issues.

1637 ● **Housing:** A situation would have a housing law issue if a person is dealing with problems
1638 around the housing where they live, or that they own. These include problems with renting a
1639 home, eviction, living conditions, discrimination, foreclosure, post-disaster housing, housing
1640 assistance, and more.

1641 ● **Immigration:** A situation would have an immigration issue if a person is not a full citizen in
1642 the US and is dealing with problems related to their status. This may include understanding
1643 visa options, working as an immigrant, political asylum, border searches, deportation, human
1644 trafficking, refugees, immigration court hearings, and more.

1645 ● **Torts:** A situation would be categorized as having a torts issue if the person is dealing with an
1646 accident or conflict with another person that involves some perceived harm. These problems
1647 may include a car accident, conflicts with neighbors, dog bites, bullying, harassment, data
1648 privacy breaches, being sued, or suing someone else.

1649 ● **Traffic:** A situation would have a traffic law issue if the person is experiencing a problem
1650 with traffic, parking, or car ownership. This might include problems with getting ticketed,
1651 getting or reinstating a driver's license, car accidents, purchasing a car, repossession, and
1652 more.

1653 This set of categories is commonly used by legal professionals as they triage potential clients. The
1654 LIST Taxonomy from Stanford Legal Design Lab has formalized these categories into a machine-
1655 readable taxonomy, available at <https://taxonomy.legal/>. The LIST taxonomy builds on the
1656 taxonomies built by legal aid groups, like the Legal Services Corporation categories list that most legal
1657 aid groups use to encode their matters, signifying what issues they helped clients with.¹³ LIST also
1658 builds off of the legal aid community's National Subject Matter Index, which was a more extensive
1659 list of categories to further assist legal aid groups in tracking the issues they helped people with.¹⁴

1660 Performing the Legal Issue-Spotting task requires parsing through informal wording and structures
1661 that a person may use to convey the situation they are struggling with. Typically the person is writing
1662 this narrative down in an informal, quick manner (like in an online intake form on a legal services
1663 website) or speaking it aloud (like on an intake hotline, or during an in-person interview). The
1664 narratives are not typically structured into a concise order. They use informal terminology rather than
1665 legal terms.

¹³See the LSC's list at <https://www.lsc.gov/i-am-grantee/grantee-guidance/lsc-reporting-requirements/case-service-reporting/csr-handbook-2017>

¹⁴See the NSMI database at <https://nsmi.lsnatp.org/>

1666 **Task** The Legal Issue-spotting task requires an LLM to consider a person’s narrative about their
1667 situation. The LLM must use this narrative to determine which legal issue category (or categories)
1668 apply to the person’s situation.

1669 **Construction process** There is a crowdsourced dataset, created via the online labeling game
1670 Learned Hands, that has established when and how these legal issue categories apply to people’s
1671 narratives. The narratives are drawn from the subreddit r/legaladvice, in which people share several
1672 lines or paragraphs about the situation they are dealing with, which they think might involve legal
1673 issues. The moderators of the subreddit are active in managing activity, so the posts do not contain
1674 personal identifying information or off-topic postings.

1675 The Stanford Legal Design Lab and Suffolk LIT Lab built the Learned Hands game so that law
1676 students and lawyers could read narratives one by one, and then answer a series of yes-no-skip
1677 questions about what legal issue seems to be present. Once there are sufficient consistent votes for a
1678 certain label to apply, or to not apply, to a narrative, then the label is finalized. A narrative may have
1679 more than one label, as mentioned above.

1680 **Significance and value** The legal issue categorization helps the professional triage the person to
1681 the right services, resources, and procedures that can assist them in resolving the legal issue. If an
1682 LLM is able to identify legal issues in people’s informal narratives, this demonstrates an ability to
1683 perform a key task in people’s justice journeys. Issue-spotting by an LLM may be able to help a
1684 person who is just starting to explore whether or how they should engage with legal services, courts,
1685 or exercising their rights.

1686 The issue-spotting task may be provided online, when people are visiting legal help websites and
1687 trying to find what guide, form, or service would best help them with their problem. Or it may
1688 be integrated into the intake process that paralegals or justice workers carry out over hotlines or
1689 in-person, to speed up the often lengthy intake process.

1690 **G.15 Legal Reasoning Causality**

1691 In LEGALBENCH, the Legal Reasoning Causality task is denoted as `legal_reasoning_causality`.

1692 **Background** In many legal domains, systematic evidential barriers hinder the substantiation of
1693 causal claims through direct evidence. To address these shortcomings, courts have recognized the
1694 power of statistical evidence in establishing causation in various contexts, such as product liability,¹⁵
1695 medical malpractice,¹⁶ discrimination,¹⁷ and more. For instance, when pursuing a labor discrimination
1696 claim, the plaintiff must establish that her protected trait was the underlying reason for the alleged
1697 discriminatory decision (e.g., firing or not hiring). However, direct evidence of discriminatory intent
1698 rarely exists, so it is often nearly impossible to refute the possibility that other (legitimate) differences
1699 between two employees or candidates were the cause for favoring one over the other. In such cases,
1700 litigants can and often do try to substantiate a causal link between the plaintiff’s group affiliation and
1701 the defendant’s behavior through statistical analysis. For instance, plaintiffs might send fictitious
1702 resumes that differ only by the suspected demographic characteristic,¹⁸ akin to a field experiment.
1703 Likewise, statistical analysis of observational data that controls for the major factors affecting the
1704 employment practice can be used to demonstrate whether a specific social group suffers from inferior
1705 outcomes (relative to some control group) vis-à-vis a particular employer, landlord, or lender that
1706 engages with a sufficiently large number of employees or customers.¹⁹

1707 **Task** The “causal reasoning” task requires an LLM to determine whether the court’s reasoning
1708 regarding the finding of whether a causal link exists between the plaintiff’s protected trait and the
1709 allegedly discriminatory decision relied on either statistical or direct-probative evidence. It requires
1710 understanding the types of words that are used to describe statistical evidence in any given context
1711 (regression, correlation, variables, control, and more), and the extent to which those words relate to
1712 substantiating a finding of causality (as opposed to other legal components).

1713 **Construction process** We manually created a dataset of fifty-nine excerpts from court decisions in
1714 lawsuits alleging labor market discrimination filed in US Federal District Courts. First, fifty-nine
1715 court decisions involving claims of labor discrimination were identified using the LexisNexis database.
1716 Second, the passages in which the finding of causality appeared were identified and extracted. Third,
1717 we coded the passages as either relying on statistical evidence (e.g., regression analysis, findings of
1718 correlation, etc.) or on direct evidence (e.g., witnesses, documents, etc.).

1719 We selected two random samples from each class to use as part of the test split.

1720 **Significance and value** The potential of LLMs to identify different types of legal reasoning in
1721 general, and the finding of causality in particular, has implications both for the legal profession and for
1722 the academic study of law and judicial decision-making. First, algorithmic tools are gradually being
1723 utilized by lawyers to assist them in preparing for litigation. Specifically, given the heterogeneity
1724 among judges, a key element of a successful litigation strategy is a lawyer’s ability to construct
1725 their arguments based on the specific inclinations of the judge assigned to the case. Gaining an
1726 accurate understanding of judges’ unique mode of reasoning (including, e.g., the types of evidence
1727 they tend to rely on), based on their prior decisions, is crucial for winning any lawsuit. Second,
1728 databases consisting of court decisions are the most common source for studying the law and judicial
1729 decision-making in legal academia. However, these databases are typically limited to rather technical
1730 information, such as the names of the parties and the judge(s), the legal area of the case, and the
1731 like. The essential part of any judicial opinion – the legal reasoning – is typically treated as a black
1732 box. An LLM that could classify the various types of legal reasoning – e.g., what evidence is used to
1733 establish causation – can facilitate studying judicial decision- making in ways currently not feasible
1734 at large scales.

¹⁵See, e.g., *Neurontin v. Pfizer*, 712 1st Cir. 52 (2013).

¹⁶*O’Neal v. St. John Hosp. & Med. Ctr.*, 487 Mich SC, 485 (2010).

¹⁷See, e.g., *International Broth. of Teamsters v. U.S.*, 431 U.S. 324 (“[i]n many cases the only available avenue of proof is the use of racial statistics to uncover clandestine and covert discrimination by the employer or union involved”); *Bazemore v. Friday*, 478 U.S. 385 (1986); *Marcus Jones v. Lee Way Motor Freigh*, 431 10 th cir 245 (1970) (“In racial discrimination cases, statistics often demonstrate more than the testimony of many witnesses”).

¹⁸*Havens Realty Corp. v. Coleman*, 455 U.S. 363, 374-75, 71 L. Ed. 2d 214, 102 S. Ct. 1114 (1982).

¹⁹See *Bazemore v. Friday*, 478 U.S. 385 (1986) (“although it need not include every conceivable factor. Given the frequency of employment discrimination litigation in the contemporary United”).

Excerpt

Relies on
statistical
evidence?

However, a review of the "over base level" numbers of the four comparators and Escalera in core endourology reflects significant differences in the severity of losses between the comparators and Escalera during the January through June 2015 time period. Escalera's utilization of different time periods for each comparator within 2015 is not appropriate when examining the team managers' performances given Bard Medical's Solo/Skylite production products. Using the same time frame for each comparator, the record reflects that between January through June of 2015, Kunzinger was \$55,626.89 below base, Santoro was \$160,651.77 above base, Peters was \$20,070.56 above base, and Martin was \$79,932.38 above base. (Ottley Dep. Exs. 3, 12, 14, 16.) These numbers demonstrate that the "losses" experienced by the comparators during the same time period as Escalera are not substantially identical. Escalera's loss of base was \$68,799.06 more than [**25] the closest comparator he identified.

No

Additionally, comparing the "over base level" numbers of the comparators and Escalera between January through October 2015 reflects that at the time Escalera was terminated he had suffered significantly more loss over base than his identified comparators: Escalera was [**805] \$174,792.44 below base, Kunzinger was \$101,132.60 below base,³ Santoro was \$110,078.73 above base, Peters was \$31,876.80 below base, and Martin was \$1,611.79 below base. Because of these significant differences in losses, no reasonable jury could find that these four comparators and Escalera are similarly situated in all relevant respects.

Equally without evidentiary significance is the statistical analysis of the list of 17; indeed, the analysis was not even admissible under HN4 the standard of *Daubert v. Merrell Dow Pharmaceuticals, Inc.*, 509 U.S. 579, 125 L. Ed. 2d 469, 113 S. Ct. 2786 (1993), governing the admissibility of expert testimony, which requires the district judge to satisfy himself that the expert is being as careful as he would be in his regular professional work outside his paid litigation consulting. E.g., *Braun v. Lorillard Inc.*, 84 F.3d 230, 234-35 (7th Cir. 1996); *Rosen v. Ciba-Geigy Corp.*, 78 F.3d 316, 318 (7th Cir. 1996); *Daubert v. Merrell Dow Pharmaceuticals, Inc.*, 43 F.3d 1311, 1316-19 (9th Cir. 1995); cf. *Mid-State Fertilizer Co. v. [**7] Exchange National Bank*, 877 F.2d 1333, 1339 (7th Cir. 1989). Although the expert used standard statistical methods for determining whether there was a significant correlation between age and retention for the 17 persons on the list, see Michael O. Finkelstein & Bruce Levin, *Statistics for Lawyers* 157 (1990) (Fisher's exact test), the omission of Sebring and Shulman from the sample tested was arbitrary. The expert should at least have indicated the sensitivity of his analysis to these omissions. More important is the expert's failure to correct for any potential explanatory variables other than age. Completely ignored was the more than remote possibility that age was correlated with a legitimate job-related qualification, such as familiarity with computers. Everyone knows that younger people are on average more comfortable with computers than older people are, just as older people are on average more comfortable with manual-shift cars than younger people are. Three weeks of training might go some distance toward closing the computer-literacy gap, yet it would be more surprising than otherwise if so short a period of training could close the gap completely. The expert could easily [**8] have inquired about the feasibility of ascertaining through discovery the history of the use of computers by each of the employees on the list of 17.

Yes

Table 32: Examples for legal_reasoning_causality

Class	Number of samples
Yes	31
No	24

Table 33: Test set class distribution

1735 **G.16 MAUD Tasks**

1736 In LEGALBENCH, the MAUD tasks are denoted as `maud_*`.

1737 **Background** We adapt the Merger Agreement Understanding Dataset (MAUD) for LEGALBENCH.
 1738 MAUD consists of over 37,000 expert-annotated examples for a set of legal reading comprehension
 1739 tasks based on the American Bar Association’s 2021 Public Target Deal Point Study. In the Study,
 1740 lawyers review merger agreements and identify key legal clauses (“deal points”) within those contracts.
 1741 The lawyers then specify the nature of the clauses by answering a predetermined set of questions that
 1742 cover a wide range of topics, including conditions to closing, the definition of material adverse effect,
 1743 and remedies to breach of contract. MAUD’s multiple-choice format, according to [67], assesses an
 1744 LLM’s ability to interpret the meaning of specialized legal language.

1745 **Task** The tasks take advantage of MAUD’s reading comprehension component. They require an
 1746 LLM—given a key legal clause and a set of descriptions for the clause—to choose the option that
 1747 best describes the clause.

1748 **Construction Process** These tasks are constructed by transforming the abridged dataset released
 1749 by [67]. The abridged dataset contains 14,928 examples with deal points extracted from 94 merger
 1750 agreements covering 92 multiple-choice questions. We narrow down to 57 questions by filtering out
 1751 the ones with fewer than 50 examples. Each example consists of the text of a deal point, the question,
 1752 options, and the answer key.

1753 We create translations that map the questions into human-readable multiple-choice prompts. For
 1754 instance, the prompt for the question “Accuracy of Target ‘General’ R&W: Bringdown Timing” is
 1755 “When are representations and warranties required to be made according to the bring down provision?”
 1756 It is then followed by an enumeration of the options for the LLM to choose among.

1757 We focus on MAUD’s abridged examples because we are interested in assessing an LLM’s legal
 1758 reading comprehension capability rather than its ability to extract relevant text segment given a
 1759 complete deal point. Additionally, inputs of examples from the main dataset, which contains
 1760 complete deal point texts, are oftentimes far longer than what an average open-source LLM could
 1761 ingest at once, rendering them unsuitable for benchmarking purposes.

1762 Table ?? lists the question and options for each MAUD-based LEGALBENCH task along with an
 1763 example input-answer pair.

Table 34: MAUD Tasks

Task
<p>Task name: MAUD_Type of Consideration Question: What type of consideration is specified in this agreement? Options: A: All Cash; B: All Stock; C: Mixed Cash/Stock; D: Mixed Cash/Stock: Election Example: each Share <omitted> shall be converted into the right to receive the Offer Price in cash, without interest (the “Merger Consideration”), minus any withholding of Taxes required by applicable Laws in accordance with Section 3.6(d) (Page 20) Answer: A</p>
<p>Task name: MAUD_Accuracy of Target "General" R&W: Bringdown Timing Answer Question: When are representations and warranties required to be made according to the bring down provision? Options: A: At Closing Only; B: At Signing & At Closing Example: Section 7.2 Conditions to Obligations of Parent and Acquisition Sub to Effect the Merger. The obligations of Parent and Acquisition Sub to effect the Merger are, in addition to the conditions set forth in Section 7.1, further subject to the satisfaction or (to the extent not prohibited by Law) waiver by Parent at or prior to the Effective Time of the following conditions: (a) each of the representations and warranties of the Company contained in this Agreement, without giving effect to any materiality or “Company Material Adverse Effect” or similar qualifications therein, shall be true and correct as of the Closing Date, except for such failures to be true and correct as would not, individually or in the aggregate, have a Company Material Adverse Effect (except to the extent such representations and warranties are expressly made as of a specific date, in which case such representations and warranties shall be so true and correct as of such specific date only); (Page 67) Answer: A</p>
<p>Task name: MAUD_Accuracy of Target Capitalization R&W (outstanding shares): Bringdown Standard Answer</p>

Table 34 – continued from previous page

Task

Question: How accurate must the capitalization representations and warranties be according to the bring down provision?

Options: A: Accurate in all material respects; B: Accurate in all respects; C: Accurate in all respects with below-threshold carveout; D: Accurate in all respects with de minimis exception

Example: Conditions to the Offer

Notwithstanding any other term of the Offer or this Agreement to the contrary, Merger Sub will not be required to accept for payment or, subject to any applicable rules and regulations of the SEC, including Rule 14e-1(c) under the Exchange Act (relating to Merger Sub's obligation to pay for or return tendered Shares promptly after the termination or withdrawal of the Offer), to pay for any Shares tendered pursuant to the Offer, and may delay the acceptance for payment of or, subject to any applicable rules and regulations of the SEC, the payment for, any tendered Shares, and (subject to the provisions of this Agreement) may terminate the Offer and not accept for payment any tendered Shares, at any scheduled Expiration Date (as it may have been extended pursuant to Section 2.1 of this Agreement) if <omitted> (ii) any of the additional conditions set forth below are not satisfied or waived in writing by Parent at the Expiration Time:

<omitted> (d) Representations and Warranties. Each of the representations and warranties set forth in: <omitted> (iv) this Agreement (other than those set forth in the foregoing clauses (i), (ii) and (iii) of this clause (d) of Annex I), without giving effect to any "materiality" or "Material Adverse Effect" qualifiers or qualifiers of similar import set forth therein, shall be true and correct as of the consummation of the Offer as though made as of the consummation of the Offer (Page 107)

Answer: D

Task name: MAUD_Accuracy of Fundamental Target R&Ws: Bringdown Standard

Question: How accurate must the fundamental representations and warranties be according to the bring down provision?

Options: A: Accurate at another materiality standard (e.g., hybrid standard); B: Accurate in all material respects; C: Accurate in all respects

Example: (b) Additional Conditions to Obligation of Parent and Merger Sub. <omitted> the representations and warranties of the Company set forth in Article 3 shall be true and correct <omitted> at and as of the Closing as if made at and as of such time (Page 11)

Answer: A

Task name: MAUD_"Ability to consummate" concept is subject to MAE carveouts

Question: Is the "ability to consummate" concept subject to Material Adverse Effect (MAE) carveouts?

Options: A: No; B: Yes

Example: "Material Adverse Effect" means, with respect to Huntington, TCF or the Surviving Corporation, as the case may be, any effect, change, event, circumstance, condition, occurrence or development that, either individually or in the aggregate, has had or would reasonably be likely to have a material adverse effect on (i) the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries, taken as a whole (provided, however, that, with respect to this clause (i), Material Adverse Effect shall not be deemed to include the impact of (A) changes, after the date hereof, in U.S. generally accepted accounting principles ("GAAP") or applicable regulatory accounting requirements, (B) changes, after the date hereof, in laws, rules or regulations (including the Pandemic Measures) of general applicability to companies in the industries in which such party and its Subsidiaries operate, or interpretations thereof by courts or Governmental Entities, (C) changes, after the date hereof, in global, national or regional political conditions (including the outbreak of war or acts of terrorism) or in economic or market (including equity, credit and debt markets, as well as changes in interest rates) conditions affecting the financial services industry generally and not specifically relating to such party or its Subsidiaries (including any such changes arising out of the Pandemic or any Pandemic Measures), (D) changes, after the date hereof, resulting from hurricanes, earthquakes, tornados, floods or other natural disasters or from any outbreak of any disease or other public health event (including the Pandemic), (E) public disclosure of the execution of this Agreement, public disclosure or consummation of the transactions contemplated hereby (including any effect on a party's relationships with its customers or employees) (it being understood that the foregoing shall not apply for purposes of the representations and warranties in Sections 3.3(b), 3.4, 4.3(b) or 4.4) or actions expressly required by this Agreement or that are taken with the prior written consent of the other party in contemplation of the transactions contemplated hereby, or (F) a decline in the trading price of a party's common stock or the failure, in and of itself, to meet earnings projections or internal financial forecasts, but not, in either case, including any underlying causes thereof; except, with respect to subclauses (A), (B), (C) or (D), to the extent that the effects of such change are materially disproportionately adverse to the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries, taken as a whole, as compared to other companies in the industry in which such party and its Subsidiaries operate) or (ii) the ability of such party to timely consummate the transactions contemplated hereby. (Page 18)

Answer: A

Task name: MAUD_FLS (MAE) Standard

Table 34 – continued from previous page

Task

Question: What is the Forward Looking Standard (FLS) with respect to Material Adverse Effect (MAE)?

Options: A: "Could" (reasonably) be expected to; B: "Would"; C: "Would" (reasonably) be expected to; D: No; E: Other forward-looking standard

Example: "Material Adverse Effect" means, with respect to BancorpSouth, Cadence or the Surviving Entity, as the case may be, any effect, change, event, circumstance, condition, occurrence or development that, either individually or in the aggregate, has had or would reasonably be expected to have a material adverse effect on (i) the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries taken as a whole (provided, however, that, with respect to this clause (i), Material Adverse Effect shall not be deemed to include the impact of (A) changes, after the date hereof, in U.S. generally accepted accounting principles ("GAAP") or applicable regulatory accounting requirements, (B) changes, after the date hereof, in laws, rules or regulations (including the Pandemic Measures) of general applicability to companies in the industries in which such party and its Subsidiaries operate, or interpretations thereof by courts or Governmental Entities (as defined below), (C) changes, after the date hereof, in global, national or regional political conditions (including the outbreak of war or acts of terrorism) or in economic or market (including equity, credit and debt markets, as well as changes in interest rates) conditions affecting the financial services industry generally and not specifically relating to such party or its Subsidiaries (including any such changes arising out of a Pandemic or any Pandemic Measures), (D) changes, after the date hereof, resulting from hurricanes, earthquakes, tornados, floods or other natural disasters or from any outbreak of any disease or other public health event (including a Pandemic), (E) public disclosure of the execution of this Agreement, public disclosure or consummation of the transactions contemplated hereby (including any effect on a party's relationships with its customers or employees) or actions expressly required by this Agreement or that are taken with the prior written consent of the other party in contemplation of the transactions contemplated hereby, or (F) a decline in the trading price of a party's common stock or the failure, in and of itself, to meet earnings projections or internal financial forecasts (it being understood that the underlying causes of such decline or failure may be taken into account in determining whether a Material Adverse Effect has occurred), except to the extent otherwise excepted by this proviso); except, with respect to subclauses (A), (B), (C), or (D) to the extent that the effects of such change are materially disproportionately adverse to the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries, taken as a whole, as compared to other companies in the industry in which such party and its Subsidiaries operate), or (ii) the ability of such party to timely consummate the transactions contemplated hereby. (Page 19)

Answer: C

Task name: MAUD_General economic and financial conditions: subject to "disproportionate impact" modifier

Question: Do changes caused by general economic and financial conditions that have disproportionate impact qualify for Material Adverse Effect (MAE)?

Options: A: No; B: Yes

Table 34 – continued from previous page

Task

Example: “Material Adverse Effect” means, with respect to Huntington, TCF or the Surviving Corporation, as the case may be, any effect, change, event, circumstance, condition, occurrence or development that, either individually or in the aggregate, has had or would reasonably be likely to have a material adverse effect on (i) the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries, taken as a whole (provided, however, that, with respect to this clause (i), Material Adverse Effect shall not be deemed to include the impact of (A) changes, after the date hereof, in U.S. generally accepted accounting principles (“GAAP”) or applicable regulatory accounting requirements, (B) changes, after the date hereof, in laws, rules or regulations (including the Pandemic Measures) of general applicability to companies in the industries in which such party and its Subsidiaries operate, or interpretations thereof by courts or Governmental Entities, (C) changes, after the date hereof, in global, national or regional political conditions (including the outbreak of war or acts of terrorism) or in economic or market (including equity, credit and debt markets, as well as changes in interest rates) conditions affecting the financial services industry generally and not specifically relating to such party or its Subsidiaries (including any such changes arising out of the Pandemic or any Pandemic Measures), (D) changes, after the date hereof, resulting from hurricanes, earthquakes, tornados, floods or other natural disasters or from any outbreak of any disease or other public health event (including the Pandemic), (E) public disclosure of the execution of this Agreement, public disclosure or consummation of the transactions contemplated hereby (including any effect on a party’s relationships with its customers or employees) (it being understood that the foregoing shall not apply for purposes of the representations and warranties in Sections 3.3(b), 3.4, 4.3(b) or 4.4) or actions expressly required by this Agreement or that are taken with the prior written consent of the other party in contemplation of the transactions contemplated hereby, or (F) a decline in the trading price of a party’s common stock or the failure, in and of itself, to meet earnings projections or internal financial forecasts, but not, in either case, including any underlying causes thereof; except, with respect to subclauses (A), (B), (C) or (D), to the extent that the effects of such change are materially disproportionately adverse to the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries, taken as a whole, as compared to other companies in the industry in which such party and its Subsidiaries operate) or (ii) the ability of such party to timely consummate the transactions contemplated hereby. (Page 18)

Answer: A

Task name: MAUD_Change in law: subject to "disproportionate impact" modifier

Question: Do changes in law that have disproportionate impact qualify for Material Adverse Effect (MAE)?

Options: A: No; B: Yes

Example: “Material Adverse Effect” means, with respect to SVB Financial, Boston Private or the Surviving Corporation, as the case may be, any effect, change, event, circumstance, condition, occurrence or development that, either individually or in the aggregate, has had or would reasonably be expected to have a material adverse effect on (i) the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries taken as a whole (provided, however, that, with respect to this clause (i), Material Adverse Effect shall not be deemed to include the impact of (A) changes, after the date hereof, in U.S. generally accepted accounting principles (“GAAP”) or applicable regulatory accounting requirements, (B) changes, after the date hereof, in laws, rules or regulations of general applicability to companies in the industries in which such party and its Subsidiaries operate, or interpretations thereof by courts or Governmental Entities, (C) changes, after the date hereof, in global, national or regional political conditions (including the outbreak of war or acts of terrorism) or in economic or market (including equity, credit and debt markets, as well as changes in interest rates) conditions affecting the financial services industry generally and not specifically relating to such party or its Subsidiaries, (D) changes, after the date hereof, resulting from hurricanes, earthquakes, tornados, floods or other natural disasters or from any outbreak of any disease or other public health event (including the COVID-19 pandemic and the implementation of the Pandemic Measures), (E) public disclosure or consummation of the transactions contemplated hereby or actions expressly required by this Agreement or that are taken with the prior written consent of the other party in contemplation of the transactions contemplated hereby (it being understood and agreed that this clause (E) shall not apply with respect to any representation or warranty that is intended to address the consequences of the execution, announcement or performance of this Agreement or consummation of the Merger) or (F) the failure, in and of itself, to meet earnings projections or financial forecasts, but not including the underlying causes thereof; except, with respect to subclause (A), (B), (C) or (D), to the extent that the effects of such change are disproportionately adverse to the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries, taken as a whole, as compared to similar companies in the industry in which such party and its Subsidiaries operate); or (ii) the ability of such party to timely consummate the transactions contemplated hereby. (Page 20)

Answer: B

Task name: MAUD_Changes in GAAP or other accounting principles: subject to "disproportionate impact" modifier

Question: Do changes in GAAP or other accounting principles that have disproportionate impact qualify for Material Adverse Effect (MAE)?

Table 34 – continued from previous page

Task**Options:** A: No; B: Yes

Example: “Company Material Adverse Effect” shall mean any state of facts, circumstance, condition, event, change, development, occurrence, result, effect, action or omission (each, an “Effect”) that, individually or in the aggregate with any one or more other Effects, (i) results in a material adverse effect on the business, financial condition or results of operations of the Company and its Subsidiaries, taken as a whole or (ii) prevents, materially impairs, materially impedes or materially delays the consummation of the Merger and the other transactions contemplated hereby on or before the End Date; provided, however, that with respect to clause (i) only, no Effect to the extent resulting or arising from any of the following, shall, to such extent, be deemed to constitute, or be taken into account in determining the occurrence of, a Company Material Adverse Effect: (A) general economic, political, business, financial or market conditions; (B) any outbreak, continuation or escalation of any military conflict, declared or undeclared war, armed hostilities, or acts of foreign or domestic terrorism; (C) any pandemic (including the SARS-CoV-2 virus and COVID-19 disease), epidemic, plague, or other outbreak of illness or public health event, hurricane, flood, tornado, earthquake or other natural disaster or act of God; (D) any failure by the Company or any of its Subsidiaries to meet any internal or external projections or forecasts or any decline in the price or trading volume of Company Common Stock (but excluding, in each case, the underlying causes of such failure or decline, as applicable, which may themselves constitute or be taken into account in determining whether there has been, or would be, a Company Material Adverse Effect); (E) the public announcement or pendency of the Merger and the other transactions contemplated hereby; (F) changes in applicable Legal Requirements; (G) changes in GAAP or any other applicable accounting standards; or (H) any action expressly required to be taken by the Company pursuant to the terms of the Agreement or at the express written direction or consent of Parent; provided, further, that any Effect relating to or arising out of or resulting from any change or event referred to in clause (A), (B), (C), (F) or (G) above may constitute, and be taken into account in determining the occurrence of, a Company Material Adverse Effect to the extent that such change or event has a disproportionate impact (but solely to the extent of such disproportionate impact) on the Company and its Subsidiaries as compared to other participants that operate in the industry in which the Company and its Subsidiaries operate. (Pages 87-88)

Answer: B

Task name: MAUD_Pandemic or other public health event: specific reference to pandemic-related governmental responses or measures

Question: Is there specific reference to pandemic-related governmental responses or measures in the clause that qualifies pandemics or other public health events for Material Adverse Effect (MAE)?

Options: A: No; B: Yes

Example: “Company Material Adverse Effect” shall mean any state of facts, circumstance, condition, event, change, development, occurrence, result, effect, action or omission (each, an “Effect”) that, individually or in the aggregate with any one or more other Effects, (i) results in a material adverse effect on the business, financial condition or results of operations of the Company and its Subsidiaries, taken as a whole or (ii) prevents, materially impairs, materially impedes or materially delays the consummation of the Merger and the other transactions contemplated hereby on or before the End Date; provided, however, that with respect to clause (i) only, no Effect to the extent resulting or arising from any of the following, shall, to such extent, be deemed to constitute, or be taken into account in determining the occurrence of, a Company Material Adverse Effect: (A) general economic, political, business, financial or market conditions; (B) any outbreak, continuation or escalation of any military conflict, declared or undeclared war, armed hostilities, or acts of foreign or domestic terrorism; (C) any pandemic (including the SARS-CoV-2 virus and COVID-19 disease), epidemic, plague, or other outbreak of illness or public health event, hurricane, flood, tornado, earthquake or other natural disaster or act of God; (D) any failure by the Company or any of its Subsidiaries to meet any internal or external projections or forecasts or any decline in the price or trading volume of Company Common Stock (but excluding, in each case, the underlying causes of such failure or decline, as applicable, which may themselves constitute or be taken into account in determining whether there has been, or would be, a Company Material Adverse Effect); (E) the public announcement or pendency of the Merger and the other transactions contemplated hereby; (F) changes in applicable Legal Requirements; (G) changes in GAAP or any other applicable accounting standards; or (H) any action expressly required to be taken by the Company pursuant to the terms of the Agreement or at the express written direction or consent of Parent; provided, further, that any Effect relating to or arising out of or resulting from any change or event referred to in clause (A), (B), (C), (F) or (G) above may constitute, and be taken into account in determining the occurrence of, a Company Material Adverse Effect to the extent that such change or event has a disproportionate impact (but solely to the extent of such disproportionate impact) on the Company and its Subsidiaries as compared to other participants that operate in the industry in which the Company and its Subsidiaries operate. (Pages 87-88)

Answer: A

Task name: MAUD_Pandemic or other public health event: subject to "disproportionate impact" modifier

Table 34 – continued from previous page

Task

Question: Do pandemics or other public health events have to have disproportionate impact to qualify for Material Adverse Effect (MAE)?

Options: A: No; B: Yes

Example: “Material Adverse Effect” means, with respect to BancorpSouth, Cadence or the Surviving Entity, as the case may be, any effect, change, event, circumstance, condition, occurrence or development that, either individually or in the aggregate, has had or would reasonably be expected to have a material adverse effect on (i) the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries taken as a whole (provided, however, that, with respect to this clause (i), Material Adverse Effect shall not be deemed to include the impact of (A) changes, after the date hereof, in U.S. generally accepted accounting principles (“GAAP”) or applicable regulatory accounting requirements, (B) changes, after the date hereof, in laws, rules or regulations (including the Pandemic Measures) of general applicability to companies in the industries in which such party and its Subsidiaries operate, or interpretations thereof by courts or Governmental Entities (as defined below), (C) changes, after the date hereof, in global, national or regional political conditions (including the outbreak of war or acts of terrorism) or in economic or market (including equity, credit and debt markets, as well as changes in interest rates) conditions affecting the financial services industry generally and not specifically relating to such party or its Subsidiaries (including any such changes arising out of a Pandemic or any Pandemic Measures), (D) changes, after the date hereof, resulting from hurricanes, earthquakes, tornados, floods or other natural disasters or from any outbreak of any disease or other public health event (including a Pandemic), (E) public disclosure of the execution of this Agreement, public disclosure or consummation of the transactions contemplated hereby (including any effect on a party’s relationships with its customers or employees) or actions expressly required by this Agreement or that are taken with the prior written consent of the other party in contemplation of the transactions contemplated hereby, or (F) a decline in the trading price of a party’s common stock or the failure, in and of itself, to meet earnings projections or internal financial forecasts (it being understood that the underlying causes of such decline or failure may be taken into account in determining whether a Material Adverse Effect has occurred), except to the extent otherwise excepted by this proviso); except, with respect to subclauses (A), (B), (C), or (D) to the extent that the effects of such change are materially disproportionately adverse to the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries, taken as a whole, as compared to other companies in the industry in which such party and its Subsidiaries operate), or (ii) the ability of such party to timely consummate the transactions contemplated hereby. (Page 19)

Answer: B

Task name: MAUD_Relational language (MAE) applies to

Question: What carveouts pertaining to Material Adverse Effect (MAE) does the relational language apply to?

Options: A: All MAE carveouts; B: No; C: Some MAE carveouts

Table 34 – continued from previous page

Task

Example: “Material Adverse Effect” means, with respect to Huntington, TCF or the Surviving Corporation, as the case may be, any effect, change, event, circumstance, condition, occurrence or development that, either individually or in the aggregate, has had or would reasonably be likely to have a material adverse effect on (i) the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries, taken as a whole (provided, however, that, with respect to this clause (i), Material Adverse Effect shall not be deemed to include the impact of (A) changes, after the date hereof, in U.S. generally accepted accounting principles (“GAAP”) or applicable regulatory accounting requirements, (B) changes, after the date hereof, in laws, rules or regulations (including the Pandemic Measures) of general applicability to companies in the industries in which such party and its Subsidiaries operate, or interpretations thereof by courts or Governmental Entities, (C) changes, after the date hereof, in global, national or regional political conditions (including the outbreak of war or acts of terrorism) or in economic or market (including equity, credit and debt markets, as well as changes in interest rates) conditions affecting the financial services industry generally and not specifically relating to such party or its Subsidiaries (including any such changes arising out of the Pandemic or any Pandemic Measures), (D) changes, after the date hereof, resulting from hurricanes, earthquakes, tornados, floods or other natural disasters or from any outbreak of any disease or other public health event (including the Pandemic), (E) public disclosure of the execution of this Agreement, public disclosure or consummation of the transactions contemplated hereby (including any effect on a party’s relationships with its customers or employees) (it being understood that the foregoing shall not apply for purposes of the representations and warranties in Sections 3.3(b), 3.4, 4.3(b) or 4.4) or actions expressly required by this Agreement or that are taken with the prior written consent of the other party in contemplation of the transactions contemplated hereby, or (F) a decline in the trading price of a party’s common stock or the failure, in and of itself, to meet earnings projections or internal financial forecasts, but not, in either case, including any underlying causes thereof; except, with respect to subclauses (A), (B), (C) or (D), to the extent that the effects of such change are materially disproportionately adverse to the business, properties, assets, liabilities, results of operations or financial condition of such party and its Subsidiaries, taken as a whole, as compared to other companies in the industry in which such party and its Subsidiaries operate) or (ii) the ability of such party to timely consummate the transactions contemplated hereby. (Page 18)

Answer: C

Task name: MAUD_Knowledge Definition

Question: What counts as Knowledge?

Options: A: Actual knowledge; B: Constructive knowledge

Example: provided, however, that with respect to clause (i) only, no Effect to the extent resulting or arising from any of the following, shall <omitted> be deemed to constitute <omitted> a Company Material Adverse Effect (Pages 87-88)

Answer: B

Task name: MAUD_Buyer consent requirement (ordinary course)

Question: In case the Buyer’s consent for the acquired company’s ordinary business operations is required, are there any limitations on the Buyer’s right to condition, withhold, or delay their consent?

Options: A: Yes. Consent may not be unreasonably withheld, conditioned or delayed.; B: No.

Table 34 – continued from previous page

Task

Example: Section 5.1 Interim Operations of the Company and Parent.

(a) From the date of this Agreement and until the Effective Time or the earlier termination of this Agreement in accordance with its terms, except as (v) otherwise expressly contemplated by this Agreement, (w) set forth in the applicable subsection of Section 5.1 of the Company Disclosure Letter (it being agreed that disclosure of any item in any subsection of Section 5.1 of the Company Disclosure Letter shall be deemed 36 disclosure with respect to any other subsection of Section 5.1 of the Company Disclosure Letter only to the extent that the relevance of such item to such subsection is reasonably apparent on its face), (x) required by applicable Law, (y)(A) required to comply with COVID-19 Measures or otherwise taken (or not taken) by the Company or any of its Subsidiaries reasonably and in good faith to respond to COVID-19 or COVID-19 Measures or (B) taken (or not taken) by the Company or any of its Subsidiaries reasonably and in good faith to respond to any other extraordinary event that was not reasonably foreseeable as of the date of this Agreement and occurring after the date of this Agreement that is outside of the control of the Company or its Affiliates and is outside of the ordinary course of business of the Company and its Subsidiaries and Joint Ventures (and is not related to a Company Takeover Proposal); provided that prior to taking any actions in reliance on this clause (y), which would otherwise be prohibited by any provision of this Agreement, the Company will use commercially reasonable efforts to provide advance notice to and consult with Parent (if reasonably practicable) with respect thereto or (z) consented to in writing by Parent (which consent shall not be unreasonably withheld, conditioned or delayed), the Company shall, and shall cause each of its Subsidiaries to, use its commercially reasonable efforts to conduct its business in all material respects in the ordinary course of business consistent with past practice and in compliance in all material respects with all material applicable Laws, and shall, and shall cause each of its Subsidiaries to, use its commercially reasonable efforts to preserve intact its present business organization, keep available the services of its directors, officers and employees and maintain existing relations and goodwill with customers, distributors, lenders, partners (including Joint Venture partners and others with similar relationships), suppliers and others having material business associations with it or its Subsidiaries; (Pages 40-41)

Answer: A

Task name: MAUD_ Includes "consistent with past practice"

Question: Does the wording of the Efforts Covenant clause include “consistent with past practice”?

Options: A: No; B: Yes

Example: 5.2 Operation of the Acquired Corporations’ Business. (a) During the Pre-Closing Period, except (w) as required or otherwise contemplated under this Agreement or as prohibited or required by applicable Legal Requirements, (x) with the written consent of Parent (which consent shall not be unreasonably withheld, delayed or conditioned, and provided that no consent shall be required if the Company reasonably believes after consulting with outside legal counsel that seeking such consent would violate Antitrust Law), (y) for any action required to be or reasonably taken, or omitted to be taken, pursuant to any COVID-19 Measures or which is otherwise required or reasonably taken, or omitted to be taken, in response to COVID-19 or any other pandemic, epidemic or disease outbreak, as determined by the Company in its reasonable discretion, or (z) as set forth in Section 5.2 of the Company Disclosure Schedule, the Company shall, and shall cause each Acquired Corporation to, use commercially reasonable efforts to conduct its business and operations in the ordinary course in all material respects (Page 41)

Answer: A

Task name: MAUD_ Ordinary course efforts standard

Question: What is the efforts standard?

Options: A: Commercially reasonable efforts; B: Flat covenant (no efforts standard); C: Reasonable best efforts

Example: “Ordinary Course of Business” means, with respect to any Person, the conduct of such Person’s business that is consistent with the past practices of such Person prior to the date of this Agreement and taken in the ordinary course of normal, day-to-day operations of such Person, but excluding any conduct that would reasonably be expected to violate applicable Law in any material respect. <omitted> 7.1. Interim Operations. (a) The Company shall, and shall cause each of its Subsidiaries to, from and after the date of this Agreement until the earlier of the Effective Time and the termination of this Agreement pursuant to Article IX (unless Parent shall otherwise approve in writing (such approval not to be unreasonably withheld, conditioned or delayed), and except as otherwise expressly required by this Agreement or as required by a Governmental Entity or applicable Law and any Material Contract in effect prior to the date of this Agreement), conduct its business in the Ordinary Course of Business (Page 66)

Answer: B

Task name: MAUD_Application of Buyer consent requirement (negative interim covenant)

Question: What negative covenants does the requirement of Buyer consent apply to?

Options: A: Applies only to specified negative covenants; B: Applies to all negative covenants

Table 34 – continued from previous page

Task

Example: Except (w) with respect to the Specified Exceptions (other than as applied to Section 5.1(a), Section 5.1(b), or Section 5.1(k)), (x) 25

as otherwise expressly contemplated or permitted by this Agreement, (y) as set forth in Section 5.1 of the Company Disclosure Schedule, or (z) with the Parent's consent (which shall not be unreasonably withheld, conditioned or delayed), during the Pre-Closing Period the Company shall not, and shall not permit any of its Subsidiaries to, directly or indirectly, do any of the following: (Pages 29-30)

Answer: B

Task name: MAUD_Fiduciary exception: Board determination standard

Question: Under what circumstances could the Board take actions on a different acquisition proposal notwithstanding the no-shop provision?

Options: A: If failure to take actions would lead to "breach" of fiduciary duties; B: If failure to take actions would be "inconsistent" with fiduciary duties; C: If failure to take actions would lead to "reasonably likely/expected breach" of fiduciary duties; D: If failure to take actions would lead to "reasonably likely/expected to be inconsistent" with fiduciary duties; E: If failure to take actions would lead to "reasonably likely/expected violation" of fiduciary duties; F: If taking such actions is "required to comply" with fiduciary duties; G: If failure to take actions would lead to "violation" of fiduciary duties; H: Under no circumstances could the Board do so.; I: Other circumstances

Example: Section 5.4 No Company Solicitation. <omitted> (b) Notwithstanding anything in Section 5.4(a) to the contrary, until the Company Stockholder Approval is obtained, if the Company receives a bona fide written Alternative Acquisition Proposal made after the date hereof that does not result from a material breach of this Section 5.4, and the Company Board determines in good faith (after consultation with outside legal counsel and a nationally recognized financial advisor) that such Alternative Acquisition Proposal is, or could reasonably be expected to lead to, a Superior Acquisition Proposal, (i) the Company may negotiate and enter into an Acceptable Confidentiality Agreement with the Person making such Alternative Acquisition Proposal; provided, that the Company shall promptly (and in no event later than twenty-four (24) hours after execution thereof) deliver a copy of such Acceptable Confidentiality Agreement to Parent, (ii) following entry into such Acceptable Confidentiality Agreement by the Company, the Company and its Representatives may provide information (including nonpublic information) subject to such executed Acceptable Confidentiality Agreement; provided, that any nonpublic information provided to such Person, including if posted to an electronic data room, shall be provided to Parent prior to or substantially concurrently with the time it is provided to such Person, and (iii) the Company and its Representatives may engage in discussion or negotiations for such Alternative Acquisition Proposal with such Person and its Representatives. (Page 59)

Answer: H

Task name: MAUD_Fiduciary exception: Board determination trigger (no shop)

Question: What type of offer could the Board take actions on notwithstanding the no-shop provision?

Options: A: Acquisition Proposal only; B: Superior Offer, or Acquisition Proposal reasonably likely/expected to result in a Superior Offer

Example: SECTION 5.02. Acquisition Proposals. <omitted> (c) Information Exchange; Discussions or Negotiation. Notwithstanding anything to the contrary contained in Section 5.02(a), prior to obtaining the Company Requisite Vote, in the event that the Company, any of its Subsidiaries or its or their Representatives receive from any Person, after the date of this Agreement, an unsolicited, bona fide written Acquisition Proposal that did not result from a breach of this Section 5.02, and that the Company Board determines in good faith, after consultation with its financial advisors and outside legal counsel, is, or is reasonably likely to lead to, a Superior Proposal, the Company may (i) furnish or provide information to the Person making such Acquisition Proposal and its Representatives pursuant to an Acceptable Confidentiality Agreement; provided, however, that the Company shall as promptly as is reasonably practicable (and in any event within one (1) Business Day) make available to Parent and Merger Sub any written material non-public information concerning the Company or its Subsidiaries that is provided to any Person pursuant to this Section 5.02(c)(i), to the extent such information was not previously made available to Parent, Merger Sub or their Representatives, and (ii) engage in discussions and negotiations with such Person and its Representatives with respect to such Acquisition Proposal. (Page 35)

Answer: B

Task name: MAUD_COR permitted with board fiduciary determination only

Question: Is Change of Recommendation permitted as long as the board determines that such change is required to fulfill its fiduciary obligations?

Options: A: No; B: Yes

Table 34 – continued from previous page

Task

Example: SECTION 5.3 No Solicitation by the Company; Company Recommendation. <omitted> (d) <omitted> Notwithstanding the foregoing or any other provision of this Agreement to the contrary, prior to the time the Company Stockholder Approval is obtained (but not thereafter), the Company Board or the Company Special 41

Committee may make a Company Adverse Recommendation Change if either (x) in the case of a Company Adverse Recommendation Change made in response to a Company Acquisition Proposal, the Company Board or the Company Special Committee has determined in good faith, after consultation with its outside financial advisors and outside legal counsel, that such Company Acquisition Proposal constitutes a Company Superior Proposal and that failure to take such action would reasonably be expected to be inconsistent with the directors' fiduciary duties under applicable Law or (y) in the case of a Company Adverse Recommendation Change made in response to a Company Intervening Event, the Company Board or the Company Special Committee has determined in good faith, after consultation with its outside financial advisors and outside legal counsel, that, as a result of a Company Intervening Event, the failure to take such action would reasonably be expected to be inconsistent with its fiduciary duties under applicable Law; (Pages 46-47)

Answer: A

Task name: MAUD_COR standard (superior offer)

Question: What standard should the board follow when determining whether to change its recommendation in connection with a superior offer?

Options: A: "Breach" of fiduciary duties; B: "Inconsistent" with fiduciary duties; C: "Reasonably likely/expected breach" of fiduciary duties; D: "Reasonably likely/expected to be inconsistent" with fiduciary duties; E: "Reasonably likely/expected violation" of fiduciary duties; F: "Required to comply" with fiduciary duties; G: "Violation" of fiduciary duties; H: More likely than not violate fiduciary duties; I: None; J: Other specified standard

Example: Section 5.2. No Solicitation. <omitted>

(c) Notwithstanding anything to the contrary contained in this Agreement, at any time prior to obtaining the Company Stockholder Approval, the Company Board may make a Change in Recommendation in response to an unsolicited bona fide written Acquisition Proposal or cause the Company to enter into an Alternative Acquisition Agreement concerning an Acquisition Proposal, in each case only if: (i) such Acquisition Proposal or Superior Proposal did not result from a breach of Section 5.2(a); (ii) the Company Board (or a committee thereof) determines in good faith (A) after consultation with the Company's outside legal counsel and Independent Financial Advisor, that such Acquisition Proposal constitutes a Superior Proposal and (B) after consultation with the Company's outside legal counsel, that in light of such Acquisition Proposal, a failure to make a Change in Recommendation or to cause the Company to enter into such Alternative Acquisition Agreement would be inconsistent with the Company Board's fiduciary obligations to the Company's stockholders under the DGCL; (Page 27)

Answer: B

Task name: MAUD_COR permitted in response to Intervening Event

Question: Is Change of Recommendation permitted in response to an intervening event?

Options: A: No; B: Yes

Table 34 – continued from previous page

Task

Example: 6.1 No Solicitation. <omitted>

Notwithstanding the foregoing or anything to the contrary set forth in this Agreement (including the provisions of this Section 6.1), at any time prior to receipt of the Company Stockholder Approval, the Company Board may effect a Company Board Recommendation Change in response to a Superior Proposal or an Intervening Event if: (i) the Company Board shall have determined in good faith (after consultation with outside counsel and outside financial advisor) that the failure to effect a Company Board Recommendation Change would be reasonably likely to be inconsistent with its fiduciary obligations under applicable law; (ii) so long as the Company and its Subsidiaries are not in material breach of their obligations pursuant to this Section 6.1 with respect to an Acquisition Proposal underlying such Company Board Recommendation Change; (iii) the Company has notified the Parent in writing that it intends to effect a Company Board Recommendation Change, describing in reasonable detail the reasons for such Company Board Recommendation Change (a "Recommendation Change Notice") (it being understood that the Recommendation Change Notice shall not constitute a Company Board Recommendation Change or a Trigger Event for purposes of this Agreement); (iv) if requested by the Parent, the Company shall have made its Representatives available to negotiate (to the extent that Parent desires to so negotiate) with the Parent's Representatives any proposed modifications to the terms and conditions of this Agreement during the three (3) Business Day period following delivery by the Company to the Parent of such Recommendation Change Notice; and (v) if the Parent shall have delivered to the Company a written, binding and irrevocable offer to alter the terms or conditions of this Agreement during such three (3) Business Day period, the Company Board shall have determined in good faith (after consultation with outside counsel), after considering the terms of such offer by the Parent, that the failure to effect a Company Board Recommendation Change would still be reasonably likely to be inconsistent with its fiduciary obligations under applicable law; provided, however, that in the event of any material revisions to an Acquisition Proposal underlying a potential Company Board Recommendation Change, the Company will be required to notify Parent of such revisions and the applicable three (3) Business Day period described above shall be extended until two (2) Business Days after the time Parent receives notification from the Company of such revisions. (Page 34)

Answer: B

Task name: MAUD_COR standard (intervening event)

Question: What standard should the board follow when determining whether to change its recommendation in response to an intervening event?

Options: A: "Breach" of fiduciary duties; B: "Inconsistent" with fiduciary duties; C: "Reasonably likely/expected breach" of fiduciary duties; D: "Reasonably likely/expected to be inconsistent" with fiduciary duties; E: "Reasonably likely/expected violation" of fiduciary duties; F: "Required to comply" with fiduciary duties; G: "Violation" of fiduciary duties; H: More likely than not violate fiduciary duties; I: Other specified standard

Example: 6.3 Shareholders' Approval and Stockholder Approval. <omitted> (c) <omitted> if the Board of Directors of <omitted> the Company, after receiving the advice of its outside counsel and, with respect to financial matters, its outside financial advisors, determines in good faith that it would more likely than not result in a violation of its fiduciary duties under applicable law to make or continue to make the Parent Board Recommendation or the Company Board Recommendation, as applicable, such Board of Directors may <omitted> submit this Agreement to its shareholders or stockholders, respectively, without recommendation (which, for the avoidance of doubt, shall constitute a Recommendation Change) (Page 57)

Answer: I

Task name: MAUD_Initial matching rights period (COR)

Question: How long is the initial matching rights period in case the board changes its recommendation?

Options: A: 2 business days or less; B: 3 business days; C: 3 calendar days; D: 4 business days; E: 4 calendar days; F: 5 business days; G: Greater than 5 business days

Example: 6.3 No Solicitation by Golden. <omitted> in response to a <omitted> Golden Competing Proposal <omitted> the Golden Board may effect a Golden Change of Recommendation; provided, however, that such a Golden Change of Recommendation may not be made unless and until: <omitted>; provided that in the event of any material amendment or material modification to any Golden Superior Proposal <omitted> , Golden shall be required to deliver a new written notice to Labrador and to comply with the requirements of this Section 6.3(e)(iv) with respect to such new written notice, except that the advance written notice obligation set forth in this Section 6.3(e)(iv) shall be reduced to two Business Days (Pages 34-35)

Answer: D

Task name: MAUD_Additional matching rights period for modifications (COR)

Question: How long is the additional matching rights period for modifications in case the board changes its recommendation?

Options: A: 2 business days or less; B: 3 business days; C: 3 days; D: 4 business days; E: 5 business days; F: > 5 business days; G: None

Table 34 – continued from previous page

Task

Example: Section 5.4 Non-Solicitation. <omitted>

(b) <omitted> Notwithstanding the foregoing, at any time prior to obtaining the East Stockholder Approval, and subject to East’s compliance in all material respects at all times with the provisions of this Section 5.4 and Section 5.3, in response to a Superior Proposal with respect to East that was not initiated, solicited, knowingly encouraged or knowingly facilitated by East or any of the East Subsidiaries or any of their respective Representatives, the East Board may make an East Adverse Recommendation Change; provided, however, that East shall not be entitled to exercise its right to make an East Adverse Recommendation Change in response to a Superior Proposal with respect to East (x) until three (3) Business Days after East provides written notice to Central (an “East Notice”) advising Central that the East Board or a committee thereof has received a Superior Proposal, specifying the material terms and conditions of such Superior Proposal, and identifying the Person or group making such Superior Proposal, (y) if during such three (3) Business Day period, Central proposes any alternative transaction (including any modifications to the terms of this Agreement), unless the East Board determines in good faith (after consultation with East’s financial advisors and outside legal counsel, and taking into account all financial, legal, and regulatory terms and conditions of such alternative transaction proposal, including any conditions to and expected timing of consummation, and any risks of non-consummation of such alternative transaction proposal) that such alternative transaction proposal is not at least as favorable to East and its stockholders as the Superior Proposal (it being understood that any change in the financial or other material terms of a Superior Proposal shall require a new East Notice and a new two (2) Business Day period under this Section 5.4(b)) and (z) unless the East Board, after consultation with outside legal counsel, determines that the failure to make an East Adverse Recommendation Change would be inconsistent with its fiduciary duties. (Page 76)

Answer: A

Task name: MAUD_Definition includes stock deals

Question: What qualifies as a superior offer in terms of stock deals?

Options: A: "All or substantially all"; B: 50%; C: Greater than 50% but not "all or substantially all"; D: Less than 50%

Example: 5.4 No Solicitation by the Company; Other Offers. <omitted> the Company shall not be entitled to: (i) make a Change in Company Board Recommendation <omitted> unless: <omitted> the Company shall have first provided prior <omitted> notice to Parent that it is prepared to <omitted> make a Change in Company Board Recommendation (a “Recommendation Change Notice”) <omitted> Any material changes with respect to the Intervening Event <omitted> or material changes to the financial terms of such Superior Proposal <omitted> shall require the Company to provide to Parent a new Recommendation Change Notice <omitted> and a new three (3) Business Day period. (Pages 45-46)

Answer: C

Task name: MAUD_Definition includes asset deals

Question: What qualifies as a superior offer in terms of asset deals?

Options: A: "All or substantially all"; B: 50%; C: Greater than 50% but not "all or substantially all"; D: Less than 50%

Example: Section 5.4 Acquisition Proposals. <omitted> (d) <omitted> following receipt of a <omitted> Acquisition Proposal <omitted> that the Company Board determines <omitted> constitutes a Superior Proposal, the Company Board may <omitted> make an Adverse Recommendation Change <omitted> if <omitted> (i) (A) the Company shall have provided to Parent <omitted> notice, <omitted> (it being understood and agreed that any amendment to the financial terms or any other material term or condition of such Superior Proposal shall require a new notice and an additional three Business Day period) (Pages 44-45)

Answer: B

Task name: MAUD_ "Financial point of view" is the sole consideration

Question: Is “financial point of view” the sole consideration when determining whether an offer is superior?

Options: A: No; B: Yes

Example: 5.4 No Solicitation by the Company; Other Offers. <omitted> the Company shall not be entitled to: (i) make a Change in Company Board Recommendation <omitted> unless: <omitted> the Company shall have first provided prior <omitted> notice to Parent that it is prepared to <omitted> make a Change in Company Board Recommendation (a “Recommendation Change Notice”) <omitted> Any material changes with respect to the Intervening Event <omitted> or material changes to the financial terms of such Superior Proposal <omitted> shall require the Company to provide to Parent a new Recommendation Change Notice <omitted> and a new three (3) Business Day period. (Pages 45-46)

Answer: A

Task name: MAUD_Definition contains knowledge requirement - answer

Question: What is the knowledge requirement in the definition of “Intervening Event”?

Options: A: Known, but consequences unknown or not reasonably foreseeable, at signing; B: Known, but consequences unknown, at signing; C: Not known and not reasonably foreseeable at signing; D: Not known at signing

Table 34 – continued from previous page

Task

Example: “Acquisition Proposal” means any inquiry, proposal or offer from any Person or group of Persons other than Parent or one of its Subsidiaries made after the date of this Agreement relating to (A) a merger, reorganization, consolidation, share purchase, share exchange, business combination, recapitalization, liquidation, dissolution, joint venture, partnership, spin-off, extraordinary dividend or similar transaction involving the Company or any of its Subsidiaries, which is structured to permit such Person or group of Persons to, directly or indirectly, acquire beneficial ownership of 20% or more of the outstanding equity securities of the Company, or 20% or more of the consolidated net revenues, net income or total assets of the Company and its Subsidiaries, taken as a whole or (B) the acquisition in any manner, directly or indirectly, of over 20% of the equity securities or consolidated total assets of the Company and its Subsidiaries, in each case other than the Merger and the other transactions contemplated by this Agreement. <omitted> “Superior Proposal” means any bona fide written Acquisition Proposal (A) on terms which the Company Board determines in good faith, after consultation with its outside legal counsel and financial advisors, to be more favorable from a financial point of view to the holders of Shares than the Merger and the other transactions contemplated by this Agreement, taking into account all the terms and conditions of such proposal and this Agreement and (B) that the Company Board determines in good faith is capable of being completed, taking into account all financial, regulatory, legal and other aspects of such proposal; provided, that for purposes of the definition of “Superior Proposal,” the references to “20%” in the definition of Acquisition Proposal shall be deemed to be references to “50%.” (Page 47)

Answer: A

Task name: MAUD_Intervening Event - Required to Occur After Signing - answer

Question: Is an “Intervening Event” required to occur after signing?

Options: A: No. It may occur or arise prior to signing.; B: Yes. It must occur or arise after signing.

Example: “Superior Proposal” shall mean, with respect to a party hereto, any <omitted> Acquisition Proposal with respect to such party made by a third party to acquire, directly or indirectly, pursuant to a tender offer, exchange offer, merger, share exchange, consolidation or other business combination, (A) all or substantially all of the assets of such party and its Subsidiaries, taken as a whole, (Page 120)

Answer: A

Task name: MAUD_Initial matching rights period (FTR)

Question: How long is the initial matching rights period in connection with the Fiduciary Termination Right (FTR)?

Options: A: 2 business days or less; B: 3 business days; C: 3 calendar days; D: 4 business days; E: 4 calendar days; F: 5 business days; G: 5 calendar days; H: Greater than 5 business days

Example: SECTION 5.3 No Solicitation by the Company; Company Recommendation. <omitted> (d) <omitted> provided, however, that the Company Board and the Company Special Committee shall not, and shall cause the Company not to, make a Company Adverse Recommendation Change in connection with a Company Superior Proposal unless (I) the Company has given Parent at least four (4) Business Days’ prior written notice of its intention to take such action (which notice shall reasonably describe the material terms of the Company Superior Proposal or attach the agreement and all material related documentation providing for such Company Superior Proposal), (II) the Company has negotiated, and has caused its Representatives to negotiate, in good faith with Parent during such notice period, to the extent Parent wishes to negotiate, to enable Parent to propose in writing a binding offer to effect revisions to the terms of this Agreement such that it would cause such Company Superior Proposal to no longer constitute a Company Superior Proposal, (III) following the end of such notice period, the Company Board or the Company Special Committee shall have considered in good faith any such binding offer from Parent, and shall have determined that the Company Superior Proposal would continue to constitute a Company Superior Proposal if the revisions proposed in such binding offer were to be given effect and (IV) in the event of any material change to the material terms of such Company Superior Proposal, the Company shall, in each case, have delivered to Parent an additional notice consistent with that described in clause (I) above and the notice period shall have recommenced, except that the notice period shall be at least two (2) Business Days (rather than the four (4) Business Days otherwise contemplated by clause (I) above); (Page 47)

Answer: D

Task name: MAUD_Tail Period Length

Question: How long is the Tail Period?

Options: A: 12 months or longer; B: Other; C: within 12 months; D: within 6 months; E: within 9 months

Example: Section 7.3 Termination Fees. <omitted> (b) <omitted> if <omitted> Parent or the Company terminates this Agreement <omitted> (iii) <omitted> the Company shall have consummated an Alternative Acquisition Proposal or entered into an Alternative Acquisition Agreement for any Alternative Acquisition Proposal <omitted> which Alternative Acquisition Proposal is ultimately consummated (Page 80)

Answer: C

Task name: MAUD_Specific Performance

Table 34 – continued from previous page

Task

Question: What is the wording of the Specific Performance clause regarding the parties' entitlement in the event of a contractual breach?

Options: A: "entitled to seek" specific performance; B: "entitled to" specific performance

Example: Section 9.10 Specific Performance. The parties hereto hereby agree that irreparable damage would occur in the event that any provision of this Agreement were not performed in accordance with its specific terms or were otherwise breached, and that money damages or other legal remedies would not be an adequate remedy for any such damages. Accordingly, the parties acknowledge and agree that each party shall be entitled to, in accordance with the provisions of this Agreement, an injunction or injunctions, specific performance or other equitable relief to prevent breaches of this Agreement and/or to enforce specifically the terms and provisions hereof in any court, in addition to any other remedy to which they are entitled at law or in equity (Page 73)

Answer: B

1764 **Significance and Value** Reading comprehension is a particularly challenging part of contract
1765 review, both to human and to machine. The MAUD tasks evaluate an LLM's ability to understand
1766 and categorize a wide spectrum of legal clauses in the context of merger agreements.

1767 **G.17 New York State Judicial Ethics**

1768 In LEGALBENCH, the New York State Judicial Ethics task is denoted as `nys_judicial_ethics`.

1769 **Background** The New York State Advisory Committee on Judicial Ethics posts rulings on real
 1770 ethical scenarios. The Committee, established in 1987, offers guidance to roughly New York State
 1771 judges and justices, as well as other judicial personnel and candidates in the state. By interpreting
 1772 the Rules Governing Judicial Conduct and the Code of Judicial Conduct, the Committee assists
 1773 these individuals in maintaining high ethical standards. Actions taken by judges in accordance with
 1774 the Committee’s formal opinions are deemed proper, which helps protect them during any future
 1775 investigations by the New York State Commission on Judicial Conduct.

1776 **Task** 300 real-world scenarios and fact patterns have been reformulated into yes or no questions to
 1777 understand whether models understand ethical rules and how they might apply to different judicial
 1778 situations.

1779 For example in a 2022 decision the Committee noted that: “A judge who previously served as the
 1780 District Attorney may not preside over a parole recognizance hearing concerning a parolee or releasee
 1781 who had originally been convicted and sentenced during the judge’s former tenure as the District
 1782 Attorney.”

1783 This is converted to a Yes/No question:

Question: Can a judge who previously served as the District Attorney preside over a parole
 recognizance hearing concerning a parolee or releasee who had originally been convicted and
 sentenced during the judge’s former tenure as the District Attorney?
 Answer: No

1784

Question	Answer
Can a judge’s law clerk assist the judge with any election-related matters during a general election when the judge is on-call?	No
Can a part-time town justice be employed part-time as a community school liaison with the county sheriff’s office simultaneously?	No
Can an appellate judge who successfully sought to vacate a vexatious lien filed by a disgruntled litigant against their real property preside over appeals from other decisions or orders rendered by the lower court judge who granted the petition to vacate?	Yes
Can a part-time town justice serve as a part-time assistant conflict defender in the same county as their court?	Yes

Table 35: Examples for `nys_judicial_ethics`

1785 **Construction process** We collect digest statements from the New York State Unified Court System
 1786 Advisory Committee on Judicial Ethics.²⁰ We collect samples from 2010, 2021, 2022, and 2023 and
 1787 then use ChatGPT to reformulate the statements into yes or no questions. To ensure that data is not
 1788 used for training OpenAI models, we opt out of data use for accounts used for task creation. We leave
 1789 2010 and 2021 data for understanding scope of data leakage from opinions being online. 2022 and
 1790 2023 data should not have been seen by most models that were trained prior to these years.

1791 **Significance and value** An important part of legal practice is abiding by ethics rules. As agents
 1792 become more involved in the legal process it will be important to understand not only whether they

²⁰<https://www.nycourts.gov/legacyhtm/ip/judiciaethics/opinions/>

1793 can understand and reason about rules for the public, but also whether they can reason about ethical
1794 principles and rules governing judges and lawyers.

1795 **G.18 OPP-115 Tasks**

1796 In LEGALBENCH, the OPP-115 tasks are denoted as opp115_*.

1797 **Background** The OPP-115 Corpus, consisting of 115 online privacy policies, provides a compre-
1798 hensive collection of privacy statements expressed in natural language [70]. Each of these policies
1799 has been meticulously read and annotated by a team of three law graduate students. The annotations
1800 present in the text specifically outline various data practices.

1801 These privacy policies are classified into ten distinct categories:

- 1802 1. First Party Collection/Use: This describes how and why a service provider collects user
1803 information.
- 1804 2. Third Party Sharing/Collection: This explains how user information may be shared with or
1805 collected by third parties.
- 1806 3. User Choice/Control: This delineates the choices and control options available to users.
- 1807 4. User Access, Edit, & Deletion: This describes if and how users may access, edit, or delete
1808 their information.
- 1809 5. Data Retention: This states how long user information is stored.
- 1810 6. Data Security: This communicates how user information is protected.
- 1811 7. Policy Change: This explains if and how users will be informed about changes to the privacy
1812 policy.
- 1813 8. Do Not Track: This discusses if and how Do Not Track signals for online tracking and
1814 advertising are honored.
- 1815 9. International & Specific Audiences: This focuses on practices that pertain only to a specific
1816 group of users (e.g., children)
- 1817 10. Other: This encompasses additional sub-labels for introductory or general text, contact
1818 information, and practices not covered by the other categories.

1819 **Task and construction process** A separate binary classification task has been created for each
1820 category, with negative samples drawn from the rest of the text. To ensure consistency, any text with
1821 less than 10 words has been eliminated. The 'other' category was not included in the categorization
1822 because it was deemed too broad and wouldn't provide much value in terms of specific classification.

1823 **Significance and value** The classification task associated with the OPP-115 Corpus serves as a
1824 significant measure of an LLM's logical reasoning ability. By assigning privacy policy segments to
1825 the right categories, LLMs demonstrate their understanding and interpretation of the language and
1826 nuances within these privacy policies. Although the task may be seen as "simple" from a human
1827 legal practitioner's viewpoint, it provides an invaluable and objective gauge of an LLM's progress in
1828 logical reasoning and language comprehension.

Task/category	Example of clause
opp115_data_retention	The name of the domain from which you access the Internet (for example, gmail.com, if you are connecting from a Google account);
opp115_data_security	However, no system can be 100% secure and human errors occur, so there is the possibility that there could be unauthorized access to your information. By using our services, you assume this risk.
opp115_do_not_track	Do Not Track Signals Our websites do not treat browsers that send a do not track signal differently from browsers that do not send one.
opp115_first_party_collection_use	Send-a-friend: In the case of send-a-friend email or card, we only collect
opp115_international_and_specific_audiences	CalOPPA is the first state law in the nation to require commercial websites and online services to post a privacy policy. The law's reach stretches well beyond California to require a person or company in the United States (and conceivably the world) that operates websites collecting personally identifiable information from California consumers to post a conspicuous privacy policy on its website stating exactly the information being collected and those individuals with whom it is being shared, and to comply with this policy. - See more at: http://consumercal.org/california-online-privacy-protection-act-caloppa/sthash.0FdRbT51.dpuf
opp115_policy_change	If we make a significant or material change in the way we use your personal information, t
opp115_third_party_sharing_collection	We use third-party payment service providers such as Amazon.com (Privacy Policy), Stripe.com (Privacy Policy), and PayPal (Privacy Policy)
opp115_user_access,_edit_and_deletion	you can access your personal information by contacting ABITA.COM as described at the bottom of this statement, or through alternative means of access described by the service.
opp115_user_choice_control	do not wish to receive any additional marketing material, you can indicate your preference on our store partners order form.

Table 36: Examples for OPP-115 tasks

1829 **G.19 Purpose of Oral Argument Questions**

1830 In LEGALBENCH, the Purpose of Oral Argument Questions task is denoted as `oral_argument_`
1831 `question_purpose`.

1832 **Background** Before a court decides a case, it typically calls before it the attorneys for the parties
1833 to the lawsuit to orally present their arguments for why the case should be resolved in favor of their
1834 clients and to answer any questions that the judge or judges have of them. In modern times, however,
1835 oral argument is not lawyers’ primary avenue for explaining their positions. Instead, parties submit
1836 their arguments in written form (“briefs”) and use their oral argument time primarily to supplement
1837 those submissions by reiterating their key positions, clarifying areas of ambiguity, and seeking to
1838 persuade judges who are uncertain how the case should be resolved.

1839 Although there is no universally accepted listing, judges questions at oral argument tend to fall into a
1840 few categories:²¹

- 1841 • **Background:** A question seeking factual or procedural information that is missing or not
1842 clear in the briefing
- 1843 • **Clarification:** A question seeking to get an advocate to clarify her position or the scope of
1844 the rule being advocated.
- 1845 • **Implications:** A question about the limits of a rule or its implications for future cases.
- 1846 • **Support:** A question offering support for the advocate’s position.
- 1847 • **Criticism:** A question criticizing an advocate’s position.
- 1848 • **Communicate:** A question designed primarily to communicate with one or more other
1849 judges on the court.
- 1850 • **Humor:** A question designed to interject humor into the argument and relieve tension.

1851 A lawyer presenting her case before a court at oral argument must be able to quickly and accurately
1852 determine why the judge has asked a particular question so as to answer it on behalf of her client
1853 in the most persuasive way possible. It is also a difficult task. Under the pressure of persistent
1854 and difficult questioning it is easy for a lawyer to misread a question and offer an unresponsive or
1855 misguided answer. Skillful lawyers learn to quickly understand not only judges’ questions but the
1856 reasons they are asked.

1857 **Task** The Purpose of Oral Argument Questions task requires an LLM to determine—given a question
1858 from an oral argument transcript—for which of the seven purposes above the judge asked the question.

1859 **Construction Process** We created a dataset of questions from U.S. Supreme Court oral argument
1860 transcripts, classified into one of the seven functions above. Questions were taken from cases argued
1861 in the 2022-23 Supreme Court term, in reverse chronological order. A question was defined as the
1862 totality of a judge’s words prior to an advocate’s response, regardless whether the words constituted a
1863 true interrogatory sentence. To include a sufficient number of questions of each type in the dataset,
1864 questions were not drawn at random. Instead rarer question types (e.g. humor and communication)
1865 were targeted for inclusion, questions of more common types (e.g. clarification) were frequently
1866 omitted.

1867 **Significance and Value** Young attorneys, and even many experienced ones, struggle with oral
1868 advocacy. It requires comfort in the courtroom, quick thinking, and careful demeanor to assess from
1869 the tone and content of a question why the judge is asking it and how most effectively to respond. In
1870 one regard, LLMs will be superior. They do not suffer from human nervousness. However, given
1871 only a text prompt rather than an audible question from which to infer tone, and given only a judge’s
1872 question and not the full case context, this task would be a challenge even for a seasoned lawyer.
1873 Whether LLMs can succeed will be an extremely interesting measure of progress in legal analysis.

²¹This categorization scheme is from [71], employed and discussed along with other possible classification schemes at [21].

Question	Purpose
May I ask you a question about standing? So it's the case, isn't it, that if any party in either of these two cases has standing, then it would be permissible for us to reach the merits of the issue?	Background
I guess I don't understand that answer. In other words, is it simply adding for religious reasons to the label that would change whether it could be regulated or not?	Clarification
And we have amicus brief from different stakeholders, some saying it may not apply in parody, but it could apply in movie titles, it might apply in something else and not this, in novels, et cetera. Why should we rule broadly? And if we rule narrowly, on what basis? You heard earlier at least three alliterations, one, the – Justice Kagan's, one Justice Jackson, one me, limit this just to parodies, because parodies really do rely on is this a joke that people are going to get.	Communicate
Mr. Martinez, I think one of the problems that you have, as evidenced by a lot of the questions that you've been getting, is with the derivative works protection, you know, which, in, you know, 106(2), actually talks about transforming any other form in which a work may be recast, transformed, or adapted. And it seems to me like your test, this meaning or message test, risks stretching the concept of transformation so broadly that it kind of eviscerates Factor 1 and puts all of the emphasis on Factor 4. I mean, when you've been asked about book to movie and – and – and, you know, songs, you keep flipping to Factor 4. So, if a work is derivative, like Lord of the Rings, you know, book to movie, is your answer just like, well, sure, that's a new meaning or message, it's transformative, so all that matters is 4?	Criticism
What are your two ones that you're like killers?	Humor
So what's the limiting line of yours – of yours? Justice Kagan asked you about another website designer. But how about people who don't believe in interracial marriage or about people who don't believe that What's – where's the line? I choose to serve whom I want. If I disagree with their personal characteristics, like race or disability, I can choose not to sell to those people disabled people should get married?	Implications
There were several questions earlier about the justification for granting preference for foster or adoptive parents who are members of an entirely different tribe. Could you speak to that?	Support

Table 37: Examples for oral_argument_question_purpose

1874 **G.20 Overruling**

1875 In LEGALBENCH, the Overruling task is denoted as *overruling*.

1876 **Background** A hallmark of the common-law legal system is that courts will *overrule* previous
 1877 judicial decisions. The act of overruling is significant, and it indicates that the overruled decision was
 1878 either in accurate in its articulation/application of a particular law, or that overruling court wishes to
 1879 announce a substantive change in law.

1880 **Task** In this task, an LLM is required—given an excerpt of judicial text—to determine if the text
 1881 overrules a previous decision.

1882 **Construction Process** This task is taken from [73], which previously studied the capacity for
 1883 finetuned BERT models to perform this task. Please refer to [73] for more information on the
 1884 construction process.

1885 **Significance and Value** Identifying when judicial text overrules another case is a basic but essential
 1886 lawyering skill. From a practical standpoint, the capacity for LLMs to correctly classify overruling
 1887 sentences could have practical applications for the design and construction of legal opinion databases.
 1888 When using or citing a case in legal arguments, lawyers must ensure that the case hasn’t been an
 1889 overruled, and is still “good law.” Tools which automatically parse legal databases and extract cases
 1890 which have been overruled would thus be helpful for constructing legal arguments.

Sentence	Overruling sentence?
brockett v. spokane arcades, inc., 472 u.s. 491, 501 (1985) (citations omitted).	No
we overrule so much of kerwin as holds that a criminal defendant is not entitled to inspect and make an analysis of the seized controlled substance.	Yes

Table 38: Examples for overruling

1891 **G.21 Personal Jurisdiction**

1892 In LEGALBENCH, the Personal Jurisdiction task is denoted as `personal_jurisdiction`.

1893 **Background** Personal jurisdiction refers to the ability of a particular court (e.g. a court in the
1894 Northern District of California) to preside over a dispute between a specific plaintiff and defendant.
1895 A court (sitting in a particular forum) has personal jurisdiction over a defendant only when that
1896 defendant has a relationship with the forum. We focus on a simplified version of the rule for federal
1897 personal jurisdiction, using the rule:

1898 There is personal jurisdiction over a defendant in the state where the defendant is
 domiciled, or when (1) the defendant has sufficient contacts with the state, such that
 they have availed themselves of the privileges of the state and (2) the claim arises out
 of the nexus of the defendant’s contacts with the state.

1899 Under this rule, there are two paths for a court have jurisdiction over a defendant: through domicile
1900 or through contacts.

- 1901 • **Domicile:** A defendant is domiciled in a state if they are a citizen of the state (i.e. they live
1902 in the state). Changing residency affects a change in citizenship.
- 1903 • **Contacts:** Alternatively, a court may exercise jurisdiction over a defendant when that
1904 defendant has *sufficient contacts* with the court’s forum, and the legal claims asserted
1905 arise from the *nexus* of the defendant’s contacts with the state. In evaluating whether a
1906 set of contacts are sufficient, lawyers look at the extent to which the defendant interacted
1907 with the forum, and availed themselves of the benefits and privileges of the state’s laws.
1908 Behavior which usually indicates sufficient contacts include: marketing in the forum or
1909 selling/shipping products into the forum. In assessing nexus, lawyers ask if the claims
1910 brought against the defendant arise from their contacts with the forum. In short: is the
1911 conduct being litigated involve the forum or its citizens in some capacity?

1912 **Task** The personal jurisdiction task requires an LLM to determine—given a fact pattern describing
1913 the events leading up to a legal claim—whether a particular court has personal jurisdiction over the
1914 defendant.

1915 **Construction process** We manually construct a dataset to test application of the personal jurisdic-
1916 tion rule, drawing inspiration from exercises found online and in legal casebooks. Each sample in
1917 our dataset describes a “fact pattern,” and asks if a court located in particular state (**A**) can exercise
1918 personal jurisdiction over an individual (**B**) named in the fact pattern. In designing the dataset, we use
1919 5 base fact patterns, and create 4 slices, where each slice evaluates a different aspect of the personal
1920 jurisdiction rule:

- 1921 • Domicile: Fact patterns where **B** is domiciled in **A**. Hence, personal jurisdiction exists.
- 1922 • No contacts: Fact patterns where **B** has insufficient contacts with **A**. Hence there is no
1923 personal jurisdiction.
- 1924 • Yes contacts, no nexus: Fact patterns where **B** has sufficient contacts with **A**, but the claims
1925 against **B** do not arise from those contacts. Hence, personal jurisdiction does not exist.
- 1926 • Yes contacts, yes nexus: Fact patterns where **B** has sufficient contacts with **A**, and the claims
1927 against **B** arise from those contacts. Hence, there is personal jurisdiction.

1928 **Caveat.** Personal jurisdiction is a rich and complex doctrine. Our dataset focuses on a narrow class of
1929 fact patterns, related to jurisdiction over individuals. We don’t consider, for instance, more complex
1930 questions related to adjudicating citizenship (e.g. the *Hertz* test) or the classic stream-of-commerce
1931 problems. We leave this to future work.

1932 **Significance and value** Identifying when personal jurisdiction exists is a skill that law students
1933 learn in their first-year civil procedure course. The personal jurisdiction task is interesting because
1934 applying even the simplified version of the rule requires reasoning over the degree of connection
1935 between a defendant and the forum state.

Facts	Personal Jurisdiction?
<p>Dustin is a repairman who lives in Arizona and repairs computers in California, Oregon, and Washington. Dustin is an avid skier, so his favorite place to go on vacation is Colorado. While travelling to repair a computer in Washington, Dustin is involved in a car crash in Oregon with Laura, a citizen of Oregon. After the accident, Dustin returns to Arizona. Laura sues him in Colorado.</p>	No
<p>David is a citizen of California. He flies to New York for a vacation, where he meets Maggie, who is also visiting from Rhode Island. While they chat, Dave fraudulently tricks Maggie into giving him her savings. David then continues his vacation and visits Texas, Oregon, Florida, and New Mexico. After he returns home, Maggie sues David for fraud in Oregon.</p>	No
<p>Ana is a lawyer who resides in Texas. While visiting Louisiana, she meets David, who runs a bike shop. David's bike shop is famous, and he frequently advertises his bikes in Texas newspapers. Ana buys a bike from David and rides it back home. Right after she crosses the border, the bike seat explodes, injuring Ana. Ana sues David in Texas.</p>	Yes
<p>Tony (from Texas) is a regional manager for a cookbook company, Tasty Eats Books (incorporated and principal place of business in Delaware). Tony's job requires him to travel from city to city to show new cookbooks to chefs. In January 2022, he was scheduled to visit restaurants in Illinois, Indiana, and Michigan. While in Michigan, Tony goes to Lake Erie to blow off some steam. He ends up getting into a fight with Arthur, a lawyer from Detroit, Michigan. Tony and Arthur each blame the other for starting the fight. Arthur sues Tony in Texas.</p>	Yes

Table 39: Examples for personal_jurisdiction

1936 **G.22 Privacy Policy Entailment**

1937 In LEGALBENCH, the Privacy Policy Entailment task is denoted as `privacy_policy_entailment`.

1938 **Background** The Privacy Policy Entailment task is created from the APP-350 corpus [76], which
 1939 consists of 350 Android app privacy policies annotated with different privacy practices. In this corpus,
 1940 individual clauses are annotated based on whether they do or do not perform a certain practice (e.g.,
 1941 “We access your location information”).

1942 **Task** Given a clause from a privacy policy and a description of the practice, the LLM must determine
 1943 if the clause describes the performance of that practice. This is analagous to an entailment task, where
 1944 the premise is the clause, and the hypothesis is the practice description.

1945 **Construction process** For each practice coded in the APP-350 corpus, we derive a natural language
 1946 description of that practice, which serves as our “hypothesis.” Each instance of this task corresponds
 1947 to a triple containing a clause, a practice description, and a binary classification (Yes/No) based on
 1948 whether the clause performs the practice. Across the dataset there are 57 unique policy descriptions.

Clause	Description	Performed?
We may collect and record information through the SN Service in accordance with the policies and terms of that SN Service. The information we collect when you connect your user account to an SN Service may include: (1) your name, (2) your SN Service user identification number and/or user name, (3) locale, city, state and country, (4) sex, (5) birth date, (6) email address, (7) profile picture or its URL, and (8) the SN Service user identification numbers for your friends that are also connected to Supercell’s game(s).	The policy describes receiving data from an unspecified single sign on service	Yes
Your e-mail address will not be stored.	The policy describes collection of the user’s e-mail by a party to the contract.	No

Table 40: Example clause-description-label pairs for Privacy Policy Entailment task.

1949 **Significance and value** The privacy policy entailment task is similar to ContractNLI, in that it
 1950 evaluate a LLM’s capacity to perform entailment-style reasoning over formal legal language. From a
 1951 lawyerly perspective, understanding whether a policy performs certain functions or empowers one
 1952 of the parties to pursue practices is an essential element of legal comprehension. From a practical
 1953 perspective, the ability for LLMs to perform this task could empower researchers to conduct broader
 1954 studies of privacy agreements. As [76] observes, annotation cost limitations often restrict the scope
 1955 of empirical studies of privacy agreements.

1956 **G.23 Privacy Policy QA**

1957 In name, the Privacy Policy QA task is denoted as `privacy_policy_qa`.

1958 **Background** The Privacy Policy QA task is derived from [51], which annotated clauses in mobile
 1959 application privacy policies based on whether they contain the answer to a question.

1960 **Task** Given an excerpt from a privacy policy and a question, the LLM must determine whether the
 1961 excerpt is relevant to answering the question or not.

1962 **Construction process** We used the snippet annotations available in [51] to construct this task,
 1963 removing all snippets with fewer than 10 words. Examples of excerpt/question/relevant tuples are
 1964 shown in the table below. 5449 instances correspond to a relevant question-clause pair, and 5474
 1965 instances correspond to an irrelevant question-clause pair.

Excerpt	Question	Class
We also use cookies, tags, web beacons, local shared objects, files, tools and programs to keep records, store your preferences, improve our advertising, and collect Non-Identifying Information, including Device Data and information about your interaction with the Site and our Business Partners' web sites.	is my search and purchase history shared with advertisers?	Relevant
We collect information about the value added services you are using over Viber and/or apps (such as games) you have downloaded through Viber.	does viber sell my information to advertisers and marketers?	Irrelevant

Table 41: Examples for Privacy Policy QA

1966 **Significance and value** Determining when a particular legal excerpt is relevant to answering a
 1967 question is essential to interpreting legal documents. This task allows us to evaluate LLMs for this
 1968 capability. From a more practical standpoint, the Privacy Policy QA task is a helpful evaluation task
 1969 when developing LLM systems which involve decompositions over long documents. A common
 1970 approach—in order to account for the fact that many long documents exceed ordinary context
 1971 windows—is to chunk documents into smaller segments, and apply a LLM independently to filter out
 1972 irrelevant segments. For QA tasks involving long policies, this task allows practitioners to measure
 1973 performance for the filtering step.

1974 **G.24 Private Right of Action (PROA)**

1975 In LEGALBENCH, the Private Right of Action task is denoted as proa.

1976 **Background** A private right of action (PROA) exists when a statute empowers an ordinary indi-
 1977 vidual (i.e. a private person) to legally enforce their rights by bringing an action in court. In short,
 1978 a PROA creates the ability for an individual to sue someone in order to recover damages or halt
 1979 some offending conduct. PROAs are ubiquitous in antitrust law (in which individuals harmed by
 1980 anti-competitive behavior can sue offending firms for compensation) and environmental law (in which
 1981 individuals can sue entities which release hazardous substances for damages) [26].

1982 **Task** In the PROA task, an LLM must determine if a statutory clause contains a private right of
 1983 action.

1984 **Construction process** We construct a dataset of PROAs by hand, drawing inspiration from clauses
 1985 found in different state codes. We construct 50 clauses which do contain a PROA, and 50 clauses
 1986 which do not. Clauses which do not contain a private right may either create no cause of action, or
 1987 empower a non-private individual (e.g., an attorney general) to bring a claim. 5 randomly sampled
 1988 clauses constitute the training set, and the remaining 95 form the test set.

Input	Answer
The attorney general or an attorney representing the state may bring an action for an injunction to prohibit a person from violating this chapter or a rule adopted under this chapter.	No
The administrator may bring an action in a court of competent jurisdiction to enforce this chapter.	No
The sheriff or the sheriff’s designee shall maintain a permanent personnel file oneach department employee.	No
If any laborer, without good cause, shall abandon his or her employer before the expiration of his or her contract, he or she shall be liable to his or her employer for the full amount of any account he or she may owe his or her employer.	Yes
No employer may discharge any employee by reason of the fact that earnings have been subjected to garnishment or execution. If an employer discharges an employee in violation of this section, the employee may within ninety days of discharge bring a civil action for recovery of twice the wages lost as a result of the violation and for an order requiring reinstatement.	Yes
In addition to all other penalties, rights, or remedies provided by law, an individual or entity that uses or attempts to use its official authority or influence for the purpose of interfering with the right of a legislative employee to make a protected disclosure is liable in a civil action for damages brought by a legislative employee.	Yes

Table 42: Examples for proa

1989 **Significance and value** The PROA task evaluates an LLM’s ability to perform a two-step reasoning
 1990 test: (1) does the statute allow a party to bring a claim in court, and (2) is that party private? Law
 1991 students and legal professionals should be capable of performing this task at near-perfect accuracy.

1992 The PROA task derives additional significance from a recent movement towards studying state
1993 statutory language [72]. Legal scholars have long been unable to conduct large scale empirical
1994 studies of state statutory language, given the sheer volume of state statutes. The ability for LLMs to
1995 accurately classify or annotate statutes could thus empower new empirical studies of state statutes.

1996 **G.25 Rule QA**

1997 In LEGALBENCH, the Rule QA task is denoted as rule_qa.

1998 **Background** Lawyers are regularly required to recall specific legal *rules* that are drawn from
 1999 cases, statutes, or other sources. Rules can take many shapes and forms. For instance, the rule
 2000 pertaining to the federal requirements for a class (in a class action lawsuit) are codified in Rule
 2001 23(a) of the Federal Rules of Civil Procedure and are simply known as the need for “numerosity,
 2002 commonality, typicality, and adequacy.”

2003 **Task** The Rule QA task evaluates a LLM’s ability to answer questions on different legal rules. The
 2004 rules are drawn from subjects typically studied in the first year of law school (e.g., civil procedure,
 2005 constitutional law, etc.). This is an open-generation task.

2006 **Construction process** We manually wrote 50 question-answer pairs, focusing on the types of rules
 2007 which are regularly tested in law school courses on civil procedure, evidence, and intellectual property.
 2008 The questions ask the LLM to either (1) restate a rule, (2) identify where a rule is codified, or (3)
 2009 list the factors employed in a particular rule. Several questions explicitly narrow their scope to a
 2010 jurisdiction (e.g., California state evidence law), in order to avoid bias towards merely federal law.

Question	Answer	Area of Law
What are the four categories of patentable subject matter?	“process, machine, manufac- ture, or composition of mat- ter.”	IP
What are the requirements for diversity jurisdiction?	Diversity jurisdiction exists when the amount in controversy exceeds \$75,000 and the plaintiffs and defendants are completely diverse (i.e. no plaintiff shares a state of citizenship with any defendant)	Civil Procedure
Under which statute are patentable subject matter requirements codified?	35 USC 101	IP
What are the factors of the Mathews balancing test?	A three-part test that determines whether an individual has received due process under the Constitution. The test balances (1) the importance of the interest at stake; (2) the risk of an erroneous deprivation of the interest because of the procedures used, and the probable value of additional procedural safeguards; and (3) the government’s interest.	Constitutional law

Table 43: Examples for Rule QA

2011 **Significance and value** The Rule QA task is an initial effort to evaluate the propensity for legal
 2012 hallucination in LLMs. The questions asked are exceedingly basic, and law students taking the
 2013 relevant course would be expected to answer them nearly perfectly.

2014 G.26 SARA Tasks

2015 In LEGALBENCH, the SARA tasks are denoted as `sara_*`.

2016 **Background** An important skill for lawyers is to determine, given the facts of a case, whether a
2017 given law applies and what it prescribes. For example, *does the payment received by the defendant*
2018 *on August 21st, 2017 qualify as wages under §3306(b) of the US Tax Code?* This task has been
2019 introduced by [39] as statutory reasoning. [33] further introduce the Statutory Reasoning Assessment
2020 dataset (SARA). SARA contains (1) a set of 9 sections, taken from US federal tax law statutes,
2021 pruned and simplified; and (2) hand-crafted cases that test the understanding of those 9 sections. In
2022 this context, a case is a paragraph of text stating facts in plain language. Each case comes either
2023 with an entailment prompt — a statement about the statutes and the case that may be true or false —
2024 or a question — asking how much tax one of the case’s protagonists owes. The SARA dataset is a
2025 simplified version of real-world cases, that retains many of the features of statutory reasoning for tax
2026 law. It poses, however, a significant challenge to NLP models [7].

2027 **Tasks** There are two SARA tasks. The first, `sara_entailment`, corresponds to the entailment
2028 cases. The entailment cases state that a given law applies to a given case, and require the LLM to
2029 produce a binary answer — akin to Recognising Textual Entailment [19]. This is an approximation
2030 of real-world statutory reasoning, where the answer is usually not strictly binary.

2031 The second task, `sara_numeric`, consists of the numeric cases. Here, the goal is to compute the
2032 amount of tax owed. We frame this as a floating point number. To measure numerical accuracy, we
2033 use the metric introduced by [33], which includes a tolerance for inaccurate predictions.

2034 **Construction process** We framed the SARA dataset for the paradigm of language modeling. Due
2035 to dependencies across sections in the statutes, the entirety of the statutes are generally relevant to
2036 determine the answer to any of the cases. However, all 9 sections do not fit into the LLM’s context
2037 window, and must be pruned. In entailment cases, the entailment prompt specifies which law from
2038 the statutes to apply. We automatically extract the text of that law, and use it as the language model
2039 prompt. For numerical cases, the entirety of the statutes are relevant, and we use that as the language
2040 model prompt. Pruning is left to the LLM’s pre-processing.

2041 **Significance and value** Statutory reasoning is an important skill for lawyers, that is used within
2042 many other legal tasks. It is a fundamental task for legal AI, probing whether a computational model
2043 can understand and reason with legal rules expressed in natural language. The types of reasoning
2044 involved in SARA are diverse — defeasible, temporal, numerical reasoning, inter alia — and relevant
2045 beyond the legal domain. Statutory reasoning combines natural language understanding and logical
2046 reasoning, a major goal for AI.

2047 If statutory reasoning were solved, it could serve as a basis for more complex legal tasks. For example,
2048 it could be used to automate the computation of taxes and benefits, without the need for coding the
2049 expert systems in use in many parts of the world [48]. A system that can do statutory reasoning would
2050 also be a step towards machine reading models that can analyze legislation and anticipate its effects,
2051 coming up with possible application scenarios [6]. As a final example, a statutory reasoning agent
2052 could be used for basic legal advice, increasing access to justice.

Task name: sara_entailment

Statute: (2) an individual legally separated from his spouse under a decree of divorce or of separate maintenance shall not be considered as married.

Description: Alice and Bob got married on April 5th, 2012. Alice and Bob were legally separated under a decree of divorce on September 16th, 2017.

Statement: Section 7703(a)(2) applies to Alice for the year 2018.

Answer: Entailment

Task name: sara_numeric

Statute: §3301. Rate of tax

 There is hereby imposed on every employer (as defined in section 3306(a)) for each calendar year an excise tax, with respect to having individuals....[Omitted from clarity]...This section shall not apply to any taxable year beginning after December 31, 2017, and before January 1, 2026.

Description: Bob is Charlie and Dorothy's son, born on April 15th, 2015. Alice married Charlie on August 8th, 2018. Alice's and Charlie's gross incomes in 2018 were \$324311 and \$414231 respectively. Alice, Bob and Charlie have the same principal place of abode in 2018. Alice and Charlie file jointly in 2018, and take the standard deduction.

Question: How much tax does Alice have to pay in 2018?

Answer: \$259487

Table 44: Example of each SARA task. For sara_numeric, we omit part of the statute for brevity.

2053 **G.27 SCALR**

2054 In LEGALBENCH, the SCALR task is denoted as `scalr`.

2055 **Background** Each case decided by the Supreme Court addresses a specific *question presented for*
2056 *review*. Both the questions and the Court’s opinions are published on the Supreme Court’s website.

2057 Many of the Court’s opinions are briefly described by other judges who recount the holdings of the
2058 Court in their own writing. For example, consider the following passage from *State of South Carolina*
2059 *v. Key*, 27971 (S.C. 2020; emphasis added):

2060 The United States Supreme Court has addressed the constitutionality of warrantless
2061 blood draws in several DUI cases. See *Schmerber*, 384 U.S. at 770-71 (**holding** the
2062 warrantless blood draw of a DUI suspect was valid because the law enforcement
2063 officer, dealing with a car accident, could “reasonably have believed that he was
2064 confronted with an emergency, in which the delay necessary to obtain a warrant,
2065 under the circumstances, threatened ‘the destruction of evidence’”).

2066 We refer to these brief descriptions as ‘holding statements’ or ‘holding parentheticals,’ since they are
2067 often enclosed by parentheses. Identifying the holding parenthetical that corresponds to a question
2068 presented for review requires a notion of ‘responsiveness’ or relevance between questions and answers
2069 as well as an understanding of the kinds of legal issues that could be implicated by a specific question
2070 presented for review.

2071 **Task** The SCALR benchmark is a collection of 571 multiple choice questions designed to assess
2072 the legal reasoning and reading comprehension ability of large language models. Each multiple-
2073 choice task gives the question presented for review in a particular Supreme Court case. The solver
2074 must determine which holding parenthetical describes the Court’s ruling in response to the question
2075 presented. Here is an example from *AT&T Mobility LLC v. Concepcion*, 563 U.S. 333 (2011) with
2076 the correct response emphasized:

2077 Question: Whether the Federal Arbitration Act preempts States from condition-
2078 ing the enforcement of an arbitration agreement on the availability of particular
2079 procedures—here, class -wide arbitration—when those procedures are not necessary
2080 to ensure that the parties to the arbitration agreement are able to vindicate their
2081 claims.

2082 A: holding that when the parties in court proceedings include claims that
2083 are subject to an arbitration agreement, the FAA requires that agreement
2084 to be enforced even if a state statute or common-law rule would otherwise
2085 exclude that claim from arbitration

2086 B: holding that the Arbitration Act “leaves no place for the exercise of
2087 discretion by a district court, but instead mandates that district courts
2088 shall direct the parties to proceed to arbitration on issues as to which an
2089 arbitration agreement has been signed”

2090 C: holding that class arbitration “changes the nature of arbitration to such
2091 a degree that it cannot be presumed the parties consented to it by simply
2092 agreeing to submit their disputes to an arbitrator”

2093 **D: holding that a California law requiring classwide arbitration was**
2094 **preempted by the FAA because it “stands as an obstacle to the ac-**
2095 **complishment and execution of the full purposes and objectives of**
2096 **Congress,” which is to promote arbitration and enforce arbitration**
2097 **agreements according to their terms**

2098 E: holding that under the Federal Arbitration Act, a challenge to an
2099 arbitration provision is for the courts to decide, while a challenge to an
2100 entire contract which includes an arbitration provision is an issue for the
2101 arbitrator

2102 **Construction** The data used to create this task comes from two sources:

- 2103 1. Questions presented were gathered from the Supreme Court of the United States’ website,
2104 which hosts PDFs of questions granted for review in each case dating back to the 2001 Term.

2105 2. Holding statements that comprise the “choices” for each question were compiled from (a)
2106 CourtListener’s collection of parenthetical descriptions and (b) extraction of parenthetical
2107 descriptions from Courtlistener’s and the Caselaw Access Project’s collections of court
2108 decisions using Eyecite.

2109 Because questions presented for review in Supreme Court cases are not easily available prior to 2001,
2110 the benchmark is limited to questions from cases decided in the 2001 Term and later. To ensure that
2111 “holding” statements would address the particular question presented, we limited the set of cases to
2112 those in which exactly one question was granted for review. We also perform some manual curation
2113 to exclude questions which are not answerable without specific knowledge of a case. For example,
2114 we eliminated a case that presented this question: “Whether this Court’s decision in *Harris v. United*
2115 *States*, 536 U.S. 545 (2002), should be overruled.”

2116 To create choices for each question presented, we first filter our set of parenthetical descriptions as
2117 follows:

- 2118 1. We limited our parenthetical descriptions to only those that begin with “holding that...”, as
2119 these are most likely to describe the core holding of the case, rather than some peripheral
2120 issue.
- 2121 2. We use only parentheticals that describe Supreme Court cases. This avoids the creation of
2122 impossible questions that ask the solver to distinguish between “holding” statements dealing
2123 with exactly the same issue at different stages of appellate review.
- 2124 3. We then select for each case the longest parenthetical meeting the above criteria. We use the
2125 longest parenthetical because it is most likely to be descriptive enough to make the question
2126 answerable.

2127 We then create a task for each case which has both a question presented and a “holding” statement
2128 meeting the above requirements. (While question-correct holding pairs are only for cases decided
2129 after 2001, we allow the use of parentheticals describing any Supreme Court case as alternative
2130 answer choices.) We then need to select the four alternative answer choices for each question in
2131 a manner that makes the task challenging. To select choices that are at least facially plausible, we
2132 find the four “holding” statements from the remaining pool that are most TF-IDF similar to the
2133 question presented. The inclusion of difficult alternative choices requires the solver to draw nuanced
2134 distinctions between legal issues that share overlap in terminology.

2135 **Significance and value** This task is significant because it tracks the useful and challenging skill of
2136 identifying a passage as relevant or responsive to a given query. LLMs that are able to perform well
2137 at this task have the potential to be more useful for complex legal question-answering and retrieval.
2138 The poor performance of simpler models on this task demonstrates that it is a challenging one that
2139 requires a level of understanding beyond the word/synonym level.

2140 **G.28 Securities Complaint Extraction**

2141 In LEGALBENCH, the Securities Complaint Extraction tasks are denoted as `ssla_*`.

2142 **Background** Securities Class Actions (SCAs) are lawsuits filed by, and on behalf of, investors
2143 alleging economic injury as a result of material misstatements or omissions in public disclosures
2144 made by corporate directors and officers. These actions allege violations of the Securities Act of
2145 1933 and Securities Exchange Act of 1934 and are predominately filed in federal court, though in
2146 2018 the United States Supreme Court determined actions brought under the '33 Act were permitted
2147 in state court.

2148 “Plaintiff(s)” is the legal term to describe the individual, company, or organization bringing forth
2149 a lawsuit. Under the class action system, one or more plaintiffs are appointed “Lead Plaintiff” by
2150 the court to represent the interests of a larger group of “similarly situated” parties. In securities
2151 class actions, investors that suffered the greatest financial loss, often public pensions or unions, are
2152 appointed lead plaintiff.

2153 “Defendant(s)” is the legal term to describe the individual, company, or organization that must defend
2154 themselves against the alleged violations or misconduct outlined in the lawsuit. There is always at
2155 least one defendant. The majority of securities class actions name the company, its CEO and its
2156 CFO. Many name additional C-suite level officers, members of the Board of Directors and additional
2157 third-parties such as the company’s independent auditor and the underwriters of public offerings.

2158 Each designated lead plaintiff, and all named defendants, are explicitly identified under the “Parties”
2159 section of the class action complaint.

2160 **Tasks** There are three extraction tasks.

- 2161 • The plaintiff task requires an LLM to extract the named plaintiffs within a text.
- 2162 • The individual defendants tasks require an LLM to extract named defendants who are
2163 individuals from within a text.
- 2164 • The company defendants tasks require an LLM to extract named defendants who are
2165 corporations/companies from within a text.

2166 Sometimes, the provided text will not explicitly name the plaintiff, an individual defendant, or a
2167 corporate defendant. In these cases, the LLM is expected to return “Not named”.

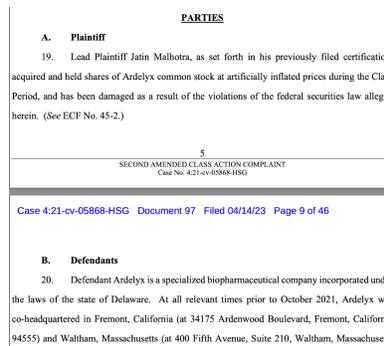

Figure 3: Example of the typical SCA structure (Case 4:21-cv-05868-HSG)

2168 **Construction process** Stanford Securities Litigation Analytics (SSLA) identifies, tracks, and aggregates
2169 data on the several hundred private shareholder lawsuits and public SEC/DOJ enforcements filed
2170 each year. SSLA fellows manually extract and analyze information including plaintiffs, defendants,
2171 judges, mediators, plaintiff and defense firms, key litigation events, real-time case statuses, settlement
2172 timing, settlement dollar amounts, attorneys’ fees and expenses, and imposed SEC / DOJ penalties.
2173 There is no ambiguity regarding the answers for this task given its nature.

2174 This dataset is an extract from the corpus of texts of securities class action complaints in the SSLA
2175 database. Given the typical structure and headings for these types of cases, this dataset represents
2176 text extracted from the complaint, between the sections titled “Parties” and “Substantive Allegations”.

2177 For cases where the second heading was not found, texts fragments were limited to 2,000 characters.
2178 Cases with both headings were then filtered to include only those with texts up to 2,000 characters,
2179 which excluded cases with longer “Parties” sections. Thus, all observations in this dataset are 2,000
2180 characters or less.

2181 Text was scraped from complaints using python’s PyPDF2 library and left unformatted and uncleaned.
2182 This training set includes several observations where the text does not include all or some of the
2183 named entities due to the method of text collection and variation in case structure. In several of these
2184 cases, plaintiff names are not present in the selected text because the plaintiff had been named earlier
2185 in the complaint.

Task

Answer: David L Starling, David R Ebbrecht, Patrick J. Ottensmeyer, Michael W. Upchurch

Task name: ssla_plaintiff

Excerpt: 11. Plaintiff, as set forth in the attached certification, purchased Catalyst securities at artificially inflated prices during the Class Period and has been damaged upon the revelation of the alleged corrective disclosures. 12. Defendant Catalyst is a Coral Gables, Florida headquartered company located at 355 Alhambra Circle Suite 1500 Coral Gables, FL 33134. The common stock is traded on the NASDAQ Stock Market ("NASDAQ") under the ticker symbol "CPRX." 13. Defendant Patrick J. McEnany ("McEnany") is the Company's co-founder, CEO and President. 14. Defendant Dr. Hubert E. Huckel M.D. ("Huckel") is the Company's co-founder and one of its directors. 15. Defendant Steven R. Miller Ph. D. ("Miller") is the company's COO and CSO. 16. The defendants referenced above in ¶¶ 13- 15 are sometimes referred to herein as the "Individual Defendants." DEFENDANTS' WRONGDOING

Background Case 1:13-cv-23878-UU Document 1 Entered on FLSD Docket 10/25/2013 Page 4 of 20 5 17. Catalyst is a specialty pharmaceutical company which develops and commercializes drugs treating orphan (rare) neuromuscular and neurological diseases. 18. Lambert-Eaton Myasthenic Syndrome ("LEMS") is an extremely serious disease which is also extremely rare, afflicting about 3.4 persons per million, and about one to two thousand patients in the United States. 19. FDA rules permit so-called "compassionate use" – use of a drug that has not been approved by the FDA outside of clinical trials. A patient may be given drugs under a compassionate use program if the patient may benefit from the treatment, the therapy can be given safely outside the clinical trial setting, no other alternative therapy is available, and the drug developer agrees to provide access to the drug. 20. Jacobus is a tiny private pharmaceutical company in New Jersey, with only dozens of employees, and only 35 as of 2009. Jacobus has been manufacturing 3,4 DAP and providing it to patients through a

Answer: Not named

2186 **Significance and value** Extracting data from legal documents is an extraordinarily resource- and
2187 time-intensive effort prone to human error. As a result, there are no known databases of non-securities
2188 class action litigation, despite the obvious public policy implications of the class action system.
2189 Automation of identification tasks coupled with human approval would improve efficiency and reduce
2190 collection costs and data errors. This task may be useful to other legal researchers and industry
2191 practitioners extracting structured data from complex texts. Identification is a very simple task that
2192 can be done by those with an understanding and familiarity with the underlying legal documents and
2193 legal system, but an LLM's ability to accurately and precisely identify entities is a useful metric to
2194 assess.

2195 **G.29 Successor Liability**

2196 In LEGALBENCH, the Successor Liability task is denoted as `successor_liability`.

2197 **Background** When one company sells its assets to another company, the purchaser is generally
2198 not liable for the seller's debts and liabilities. Successor liability is a common law exception to this
2199 general rule. In order to spot a successor liability issue, lawyers must understand how courts apply
2200 the doctrine.

2201 The doctrine holds purchasers of all, or substantially all, of a seller's assets liable for the debts and
2202 liabilities of the seller if:

- 2203 1. the purchaser expressly agrees to be held liable;
- 2204 2. the assets are fraudulently conveyed to the purchaser in order to avoid liability;
- 2205 3. there is a de facto merger between the purchaser and seller; or
- 2206 4. the purchaser is a mere continuation of the seller.

2207 Express agreement is governed by standard contract law rules. In practice, if a purchase agreement
2208 contains a provision to assume liabilities, litigation will rarely arise. Courts, however, sometimes
2209 interpret an implied agreement in the absence of a written provision.

2210 Assets are fraudulently conveyed when the seller intends to escape liability through a sale or knows
2211 that liability will be avoided through a sale.

2212 De facto merger is a multifactor test that consists of (1) continuity of ownership; (2) cessation of
2213 ordinary business and dissolution of the acquired corporation as soon as possible; (3) assumption by
2214 the purchaser of the liabilities ordinarily necessary for the uninterrupted continuation of the business
2215 of the acquired corporation; and (4) continuity of management, personnel, physical location, assets,
2216 and general business operation. Some jurisdictions require a showing of all four elements. Others do
2217 not, and simply emphasize that the substance of the asset sale is one of a merger, regardless of its
2218 form.

2219 Mere continuation typically requires a showing that after the asset sale, only one corporation remains
2220 and there is an overlap of stock, stockholders, and directors between the two corporations. There are
2221 two variations of the mere continuation exception. The first variation is the "continuity of enterprise"
2222 exception. In order to find continuity of enterprise, and thus liability for the purchaser of assets, courts
2223 engage in a multifactor analysis. Factors include: (1) retention of the same employees; (2) retention
2224 of the same supervisory personnel; (3) retention of the same production facilities in the same physical
2225 location; (4) production of the same product; (5) retention of the same name; (6) continuity of assets;
2226 (7) continuity of general business operations; and (8) whether the successor holds itself out as the
2227 continuation of the previous enterprise. The second variation is the product line exception. This
2228 exception imposes liability on asset purchasers who continue manufacturing products of a seller's
2229 product line. This exception generally requires that defendants show that the purchaser of assets is
2230 able to assume the risk spreading role of the original manufacturer, and that imposing liability is fair
2231 because the purchaser enjoys the continued goodwill of the original manufacturer.

2232 Scholars have noted that fraud, de facto merger, and mere continuation (and its variants) overlap. They
2233 share the common thread of inadequate consideration, that is, the consideration given in exchange
2234 for the assets is unable to fund the liabilities that underwrite those assets. Because of the overlap,
2235 different courts might apply different doctrines to identical sets of facts, but arrive at the same policy
2236 [25].

2237 Successor liability doctrine is commonly taught in a course on corporate law or business associations
2238 in law school. Sometimes it is reserved for upper level courses in corporate finance or mergers and
2239 acquisitions. Students are expected to spot successor liability issues and understand how to determine
2240 if a successor will be held liable.

2241 **Task** The Successor Liability task requires an LLM to spot a successor liability issue and identify
2242 its relevant exception to no liability. If more than one exception is relevant, the LLM is required to
2243 state the additional exception(s). The task does not include identification of the two variations to the
2244 mere continuation exception (continuity of enterprise and product line).

Facts	Issue	Relevant Exception
Large Incarceration Services purchased a substantial amount of Small Prison's assets last year. The asset purchase agreement expressly disclaimed Small Prison's potential liability for an employment discrimination claim arising out of its prison service activities. Small conveyed its assets to Large because Small's owners were concerned that the liability arising from the lawsuit would lead to bankruptcy. Several months following the asset purchase, Small Prison lost the discrimination lawsuit. The plaintiffs now seek relief from Large Incarceration Services.	successor liability	fraudulent conveyance, mere continuation
Large Incarceration Services purchased a substantial amount of Small Prison's assets last year. The asset purchase agreement expressly assumed any liability arising out of its prison service activities. Several months following the asset purchase, Small Prison lost a number of discrimination lawsuits. The plaintiffs now seek relief from Large Incarceration Services.	successor liability	express agreement
Big Pharma purchases substantially all of DW I's assets. The purchase agreement expressly provides for assumption of only those liabilities necessary for continuing operations of DW I. DW I had developed a successful drug that regulated oxygen levels in the blood. After the purchase of DW I's assets, DW I dissolves. DW I's shareholders maintain ownership in Big Pharma equivalent to their ownership in DW I. In addition, there is some overlap between the two companies' management teams. Moreover, Big Pharma continues to employ seventy percent of DW I's workforce. Past users of DW I's drug bring a mass tort claim against Big Pharma alleging that DW I's drug incorrectly measured oxygen levels in the blood leading to harm.	successor liability	de facto merger, mere continuation
Big Pharma purchases substantially all of DW I's assets. The purchase agreement expressly provides for assumption of only those liabilities necessary for continuing operations of DW I. DW I had developed a successful drug that regulated oxygen levels in the blood. After the purchase of DW I's assets, DW I dissolves. DW I's shareholders do not own any stock in Big Pharma. However, there is some overlap between the two companies' management teams. In addition, Big Pharma continues to employ seventy percent of DW I's workforce. Past users of DW I's drug bring a mass tort claim against Big Pharma alleging that DW I's drug incorrectly measured oxygen levels in the blood leading to harm.	successor liability	mere continuation

Table 46: Examples for successor liability.

2245 **G.30 Supply Chain Disclosure Tasks**

2246 In LEGALBENCH, the Supply Chain Disclosure Tasks are denoted as supply_chain_disclosure_
2247 *.

2248 **Background** Corporations are frequently legally required to disclose information that may be
2249 relevant to investors, regulators, or members of the public. One example of this kind of disclosure
2250 requirement is laws that require corporations doing business in particular jurisdictions to provide
2251 detailed information on their supply chains, which is intended to ensure that the company’s business
2252 practices are not supporting things like human trafficking or human rights violations. One example of
2253 these kind of disclosure requirements is the California Transparency in Supply Chains Act (CTSCA).
2254 The CTSCA applies to corporations that are a: “[1] retail seller and manufacturer [2] doing business
2255 in this state [of California] and [3] having annual worldwide gross receipts that exceed one hundred
2256 million dollars (\$100,000,000).”²² If a corporation meets these criteria, they are required to post
2257 information on five topics:

- 2258 • **Verification:** “[A]t a minimum, disclose to what extent, if any, that the retail seller or
2259 manufacturer . . . [e]ngages in verification of product supply chains to evaluate and address
2260 risks of human trafficking and slavery. The disclosure shall specify if the verification was
2261 not conducted by a third party.”²³
- 2262 • **Audits:** “[A]t a minimum, disclose to what extent, if any, that the retail seller or manufacturer
2263 . . . [c]onducts audits of suppliers to evaluate supplier compliance with company standards
2264 for trafficking and slavery in supply chains. The disclosure shall specify if the verification
2265 was not an independent, unannounced audit.”²⁴
- 2266 • **Certification:** “[A]t a minimum, disclose to what extent, if any, that the retail seller or
2267 manufacturer . . . [r]equires direct suppliers to certify that materials incorporated into the
2268 product comply with the laws regarding slavery and human trafficking of the country or
2269 countries in which they are doing business.”²⁵
- 2270 • **Accountability:** “[A]t a minimum, disclose to what extent, if any, that the retail seller or
2271 manufacturer . . . [m]aintains internal accountability standards and procedures for employees
2272 or contractors failing to meet company standards regarding slavery and trafficking.”²⁶
- 2273 • **Training:** “[A]t a minimum, disclose to what extent, if any, that the retail seller or manufac-
2274 turer . . . [p]rovides company employees and management, who have direct responsibility
2275 for supply chain management, training on human trafficking and slavery, particularly with
2276 respect to mitigating risks within the supply chains of products.”²⁷

2277 In addition to requiring corporations that meet the specified criteria to post disclosures that provide
2278 this information, the California Attorney General’s office has also posted a guide informing firms of
2279 “Best Practices” for what specific information to provide on each of these five topics.²⁸

2280 However, prior research has suggested that companies do not always post disclosures that cover
2281 each of these topics; and, even when they do, the disclosures are not always consistent with the
2282 recommended best practices [14].

2283 **Construction Process** We constructed this task based on an existing dataset of supply chain
2284 disclosures. In the summer of 2015, we, with the help of research assistants, we searched the websites
2285 of corporations that had previously been identified by an organization called “KnowTheChain” as
2286 being required to post supply chain disclosures to be compliant with the California Supply Chain
2287 Transparency Act. Through this process, we found disclosures for roughly 400 firms out of roughly
2288 500 firms for which KnowTheChain suggested were required to post disclosures.

²² See California Transparency in Supply Chains Act, CAL. CIV. CODE § 1714.43(a)(1) (West 2012).

²³ CAL. CIV. CODE § 1714.43(c)(1).

²⁴ CAL. CIV. CODE § 1714.43(c)(2).

²⁵ CAL. CIV. CODE § 1714.43(c)(3).

²⁶ CAL. CIV. CODE § 1714.43(c)(4).

²⁷ CAL. CIV. CODE § 1714.43(c)(5).

²⁸ CAL. DEP’T OF JUSTICE, THE CALIFORNIA TRANSPARENCY IN SUPPLY CHAINS ACT: A RESOURCE GUIDE (2015), <https://oag.ca.gov/sites/all/files/agweb/pdfs/sb657/resource-guide.pdf>.

2289 For each of these roughly 400 firms, we saved copies of their supply chain disclosures. We then had
2290 research assistants read the disclosures and code whether they included each of the five required
2291 topics for disclosure and, if so, whether the disclosures on those five topics were consistent with the
2292 best practices outlined by the California Attorney General’s office.

2293 We convert each of these 10 coded variables into a distinct binary classification task, producing 10
2294 tasks. Table 47 lists each task, along with the precise question used to code the disclosure.

2295 **Significance and Value** Corporate disclosure requirements are a commonly used regulatory tool,
2296 but evidence suggests that firms do not always fully comply with these disclosure requirements. The
2297 Supply Chain Disclosure task evaluates whether LLMs may be able to determine whether corporations
2298 are complying with those disclosure requirements. Because these disclosures are often formatted very
2299 differently, written in complex language, and may be designed to obfuscate relevant information, this
2300 task provides a useful measure of whether LLMs can parse the content covered in legal documents.

Task	Question
disclosed_verification	Does the statement disclose to what extent, if any, that the retail seller or manufacturer engages in verification of product supply chains to evaluate and address risks of human trafficking and slavery? If the company conducts verification], the disclosure shall specify if the verification was not conducted by a third party.
disclosed_audits	Does the statement disclose to what extent, if any, that the retail seller or manufacturer conducts audits of suppliers to evaluate supplier compliance with company standards for trafficking and slavery in supply chains? The disclosure shall specify if the verification was not an independent, unannounced audit.
disclosed_certification	Does the statement disclose to what extent, if any, that the retail seller or manufacturer requires direct suppliers to certify that materials incorporated into the product comply with the laws regarding slavery and human trafficking of the country or countries in which they are doing business?
disclosed_accountability	Does the statement disclose to what extent, if any, that the retail seller or manufacturer maintains internal accountability standards and procedures for employees or contractors failing to meet company standards regarding slavery and trafficking?
disclosed_training	Does the statement disclose to what extent, if any, that the retail seller or manufacturer provides company employees and management, who have direct responsibility for supply chain management, training on human trafficking and slavery, particularly with respect to mitigating risks within the supply chains of products?
best_practice_verification	Does the statement disclose whether the retail seller or manufacturer engages in verification and auditing as one practice, expresses that it may conduct an audit, or expressess that it is assessing supplier risks through a review of the US Dept. of Labor's List?
best_practice_audits	Does the statement disclose whether the retail seller or manufacturer performs any type of audit, or reserves the right to audit?
best_practice_certification	Does the statement disclose whether the retail seller or manufacturer requires direct suppliers to certify that they comply with labor and anti-trafficking laws?
best_practice_accountability	Does the statement disclose whether the retail seller or manufacturer maintains internal compliance procedures on company standards regarding human trafficking and slavery? This includes any type of internal accountability mechanism. Requiring independently of the supply to comply with laws does not qualify or asking for documentary evidence of compliance does not count either.
best_practice_training	Does the statement disclose whether the retail seller or manufacturer provides training to employees on human trafficking and slavery? Broad policies such as ongoing dialogue on mitigating risks of human trafficking and slavery or increasing managers and purchasers knowledge about health, safety and labor practices qualify as training. Providing training to contractors who failed to comply with human trafficking laws counts as training.

Table 47: Supply Chain Disclosure Tasks

2301 **G.31 Telemarketing Sales Rule**

2302 In LEGALBENCH, the Telemarketing Sales Rule task is denoted as `telemarketing_sales_rule`.

2303 **Background** The Telemarketing Sales Rule (16 C.F.R. Part 310) is a set of regulations promulgated
2304 by the Federal Trade Commission to implement the Telemarketing and Consumer Fraud and Abuse
2305 Prevention Act. Its purpose is to protect consumers from specified deceptive and abusive telemarketing
2306 practices. This task focuses on 16 C.F.R. § 310.3(a)(1) and 16 C.F.R. § 310.3(a)(2), which outline
2307 a series of specific telemarketing practices prohibited as "deceptive." 16 C.F.R. § 310.3(a)(1) lists
2308 information that must be disclosed to a consumer before a sale is made, and 16 C.F.R. § 310.3(a)(2)
2309 lists categories of information that a telemarketer is prohibited from misrepresenting. 16 C.F.R. §
2310 310.2 provides definitions relevant to both of these subsections.

2311 The Telemarketing Sales Rule (TSR) is not commonly taught in law school as its own topic, but may
2312 be used as examples in courses on consumer protection law, administrative law, telecommunications
2313 law, and the like. Because of its simplicity, it has also been used in beginner-level legal research
2314 exercises tasking students with finding the TSR in the Code of Federal Regulations and applying it to
2315 a set of facts.

2316 Applying the TSR would require an LLM to classify a set of facts as either falling within or outside
2317 of the specific prohibitions outlined in the rule. For example, the TSR requires that telemarketers
2318 disclose certain material information before a sale is made, such as the total cost of the goods or
2319 services, the quantities of goods or services being purchased, and exchange and return restrictions.
2320 It also forbids telemarketers from making material misrepresentations as to cost, quantity, quality,
2321 endorsement or sponsorship, and the like. In many real-life situations, it would be ambiguous whether
2322 certain telemarketer behavior would violate the TSR; for example, it could be contentious whether
2323 a given misrepresentation fits the definition of "material." However, this task is limited to clear,
2324 unambiguous violations or non-violations, such as if a telemarketer told a consumer that they were
2325 selling four apples for four dollars, when in fact they were selling four apples for six dollars.

2326 The following subsections 16 C.F.R. § 310.3(a)(1) and 16 C.F.R. § 310.3(a)(2) were ignored in the
2327 task, given their complexity or their reference to other statutes and regulations:

- 2328 ● 16 C.F.R. § 310.3(a)(1)(vi)
- 2329 ● 16 C.F.R. § 310.3(a)(1)(viii)
- 2330 ● 16 C.F.R. § 310.3(a)(2)(vi)
- 2331 ● 16 C.F.R. § 310.3(a)(2)(viii)

2332 **Task** The TSR task is meant to test whether an LLM can classify simple sets of facts as describing
2333 a violation of the TSR, or not describing a violation of the TSR.

2334 **Construction process** We manually created 50 samples, such that examples of at least one violation
2335 and at least one non-violation of each relevant subsection of 16 C.F.R. § 310.3(a)(1) and 16 C.F.R. §
2336 310.3(a)(2) were present.

2337 **Significance and value** Determining whether a simple and unambiguous set of facts falls within
2338 the ambit of 16 C.F.R. § 310.3(a)(1) or 16 C.F.R. § 310.3(a)(2) would be an easy task for law students
2339 and lawyers, as well as many non-lawyers. However, an LLM that was trained to recognize clear
2340 violations of consumer protection laws could help administrative agencies like the Federal Trade
2341 Commission inform normal citizens of their rights.

Input	Answer
Acme Toys is a telemarketer subject to the Telemarketing Sales Rule. Acme Toys sold a customer a frisbee. It disclosed the brand of the frisbee, but did not tell the customer the frisbee was manufactured in Portugal. Is this a violation of the Telemarketing Sales Rule?	No
Acme Toys is a telemarketer subject to the Telemarketing Sales Rule. Acme Toys told a customer that it would sell them a handful of frisbees at a very reasonable price, and that shipping would be \$5. Then, the customer agreed to the sale. Is this a violation of the Telemarketing Sales Rule?	Yes

Table 48: Examples for telemarketing_sales_rule

2342 **G.32 Textualism Tasks**

2343 In LEGALBENCH, the Textualism tasks are denoted as `textualism_tool_*`.

2344 **Background** Courts regularly interpret statutes to determine the precise meaning of words con-
2345 tained in the statute. For instance, suppose a statute specifies that “It shall be illegal to park a vehicle
2346 inside public parks for longer than thirty minutes.” A court may be asked to determine whether the
2347 statute prohibits persons from parking bicycles inside public parks. This requires defining the term
2348 “vehicle” and determining if a bicycle is a type of vehicle.

2349 To guide the interpretation of ambiguous statutory terms, American jurisprudence has developed
2350 numerous *principles* of statutory construction or interpretation. These principles—also referred to as
2351 tools or canons—are rules which dictate how terms in statutes should be interpreted. For instance, the
2352 principle of *eiusdem generis* states that where general words or phrases follow a number of specific
2353 words or phrases, the general words are specifically construed as limited and apply only to persons or
2354 things of the same kind or class as those expressly mentioned [59].

2355 One approach to statutory interpretation—known as *textualism*—states that only the text of the statute
2356 should be considered [60]. In contrast, other approaches to interpreting an ambiguous term might
2357 call for a court to analyze the purpose of the statute, the history of the statute, or the intent of the
2358 legislature.

2359 **Task** The Textualism tasks ask a LLM to determine if an excerpt of judicial text is applying a
2360 specific textual tool when performing statutory interpretation. There are two tasks: dictionaries
2361 (`textualism_tool_dictionaries`) and .

- 2362 • The first task is plain-meaning (`textualism_tool_plain`), and it requires an LLM to determine
2363 if a court is applying the “plain meaning” rule. The plain meaning rule says that statutory
2364 text should be interpreted according to its plain or ordinary meaning.
- 2365 • The second task is dictionaries (`textualism_tool_dictionaries`), and it requires an LLM to
2366 determine if a court is using dictionaries to define the statutory text.

2367 **Construction Process** For each task we extracted paragraphs from Court of Appeals opinions and
2368 manually annotated whether the paragraphs showed the court as “using” the respective tool.

- 2369 • In order to count as using plain meaning, the paragraph must reference the plain or ordinary
2370 meaning of the text. This includes directly saying “plain meaning” or referencing the general
2371 logic of the plain meaning rule. There must also be evidence that the court used the tool
2372 in its decision. This latter condition is notable because legal scholars often care about
2373 whether the court actually used the tool when defending its decision. Common examples
2374 of using include stating it as a general rule of decision (“[0]ur obligation is to look to the
2375 plain language of the statute to effectuate the intent of congress”) or applying it to the facts
2376 (“The statute’s plain language indicates the 150% fee cap applies if (1) the plaintiff was “a
2377 prisoner” at the time he brought the action and (2) he was awarded attorney’s fees pursuant
2378 to § 1988.”). “Using” does not, for example, include paragraphs that criticize the use of the
2379 plain meaning rule.
- 2380 • In order to count as using dictionaries, the paragraph must reference a dictionary. There
2381 must also be evidence that the court used a dictionary as part of its rationale. This latter
2382 condition is notable because legal scholars often care about whether the court actually used
2383 the tool when defending its decision. Common examples of using include stating it as a
2384 general rule of decision (“[We use a dictionary to help determine the plain meaning of the
2385 statutory text”) or applying it to the facts (“According to the Websters dictionary, a vehicle is
2386 any *means in or by which someone travels, or something is carried or conveyed*”). “Using”
2387 does not, for example, include paragraphs that criticize the use of dictionaries.

2388 **Significance and value** Recognizing when a court is applying a particular canon of interpretation
2389 is a classical skill law students are expected to learn. LLM performance on this task thus offers
2390 a heuristic for comparing LLM comprehension of judicial text to that of a law student’s. More
2391 practically, the capacity for LLMs to detect when certain canons are being applied could make them
2392 a valuable tool for empirical legal scholars.

Input	Answer
overcome our prior interpretation of a statute depends, in turn, on whether we regarded the statute as unambiguously compelling our interpretation.	No
the statutory waiver is express, and its range is defined in unmistakable language. to say that a private person, but not the united states, is liable under title vii for interest as an element of an attorneys fee would rob the unambiguous statutory language of its plain meaning. it would defeat the statutory imposition upon the united states of a liability for costs, and the statutory inclusion of a reasonable attorneys fee as part of the costs, identical to that of a private party in similar circumstances. the scope-setting statutory words the same as a private person mark out the united states liability for attorneys fees as well as costs in the traditional sense. our responsibility as judges is to enforce this provision according to its terms.	Yes

Table 49: Examples for textualism_tool_plain

Input	Answer
<p>we pause to note that even if congress sought, through the csra, to regulate the nonuse of interstate channels, it would still be within its constitutional command to do so. the supreme court has often held, in several contexts, that the defendants nonuse of interstate channels alone does not shield him from federal purview under the commerce clause. in heart of atlanta motel, inc. v. united states, 379 u.s. 241, 250, 85 s.ct. 348, 353, 13 l.ed.2d 258 (1964), the court upheld commerce clause jurisdiction over a local motel that failed to engage in interstate commerce when it refused to rent rooms to black guests. the court held that by failing to rent the rooms, the hotel inhibited black travelers from crossing state lines and thus obstructed interstate commerce that otherwise would have occurred. id. at 253, 85 s.ct. at 356. in standard oil co. v. united states, 221 u.s. 1, 68, 31 s.ct. 502, 518, 55 l.ed. 619 (1911), the court upheld the sherman act, 15 u.s.c. 1, 2, as permissible congressional action under the commerce clause. the sherman act prohibits restraints of trade and obstructions of interstate commerce in order to facilitate commerce that otherwise would occur absent the defendants monopolistic behavior. finally, in united states v. green, 350 u.s. 415, 420, 76 s.ct. 522, 525, 100 l.ed. 494 (1956), the court found constitutional the hobbs act, 18 u.s.c. 1951, which punishes interference with interstate commerce by extortion, robbery or physical violence [by] ... outlaw[ing] such interference in any way or degree. to accept baileys nonuse argument would mean, as emphasized by the second circuit, that congress would have no power to prohibit a monopoly so complete as to thwart all other interstate commerce in a line of trade[;] or to punish under the hobbs act someone who successfully prevented interstate trade by extortion and murder. sage, 92 f.3d at 105.</p>	No
<p>our primary area of concern with the district courts determination is its confident assertion that the language of 326(a) is unambiguous. see lan assocs., 237 b.r. at 56-57. in this day and age when we exchange by a keystroke or series of keystrokes what we used to handle only in cash, we do not think that the term moneys is so clear as the district court indicated. in fact, one of the definitions cited by the district court refers to money as a measure of value, see id. at 55-56 (citing websters third new intl dictionary 1458 (1986)), which surely is a concept that evolves along with and is dependent upon changing cultural, social, and economic practices and institutions. for example, in todays society the term money could easily encompass the concept of credit, which increasing numbers of people use as a method of payment. the term money might also encompass property, especially when property is used as a method of payment or a measure of wealth. see websters ii new college dictionary 707 (defining money as [a] medium that can be exchanged for goods and services and is used as a measure of their values on the market and as [p]roperty and assets considered in terms of monetary value); supra note 5 (describing the nabts argument that an exchange of property involves an exchange of value). but see in re brigantine beach hotel corp., 197 f.2d 296, 299 (3d cir.1952) (referring to precode statute governing receiver compensation and stating that [i]t is clear that the word moneys in the clause ... upon all moneys disbursed or turned over ... is not the equivalent of property.). these reasonable interpretations of the term moneys render it ambiguous for purposes of our interpretation of 326(a). see taylor v. continental group change in control severance pay plan, 933 f.2d 1227, 1232 (3d cir.1991) (a term is ambiguous if it is subject to reasonable alternative interpretations.); accord united states v. gibbens, 25 f.3d 28, 34 (1st cir.1994) (a statute is ambiguous if it reasonably can be read in more than one way).</p>	Yes

Table 50: Examples for textualism_tool_dictionaries

2393 **G.33 UCC vs Common Law**

2394 In LEGALBENCH, the UCC vs Common Law task is denoted as `ucc_v_common_law`.

2395 **Background** In the United States, contracts are typically governed by one of two different bodies
2396 of law depending on the subject matter of the contract. Contracts for the sale of goods (physical,
2397 moveable things) are governed by the Uniform Commercial Code (UCC), a uniform set of laws
2398 created by the Uniform Law Commission and adopted in all US jurisdictions. Contracts for services
2399 and real estate, on the other hand, are governed by state common law. For example, a contract for
2400 Alice to sell Bob her bike would be governed by the UCC (sale of a good), but a contract for Bob to
2401 repair Alice’s bike would be governed by the common law (service).

2402 This distinction is significant because the UCC and the common law diverge on numerous important
2403 legal issues such as:

- 2404 ● Offer and acceptance: The common law requires an offeree’s acceptance to exactly match
2405 the terms of the offeror’s offer in order for a contract to be formed (the “mirror image” rule).
2406 The UCC, on the other hand, allows for some variation in the terms under UCC Section
2407 2-207.
- 2408 ● Definiteness: For a common law contract to be enforceable, it must be reasonably definite
2409 with respect to all material terms. For example, a service contract would not be enforceable
2410 without a price term or an adequate description of the service to be provided. The UCC only
2411 requires that a goods contract include the good being sold and the quantity. If any other term
2412 is missing from the contract (such as price or delivery), it will be filled in by UCC default
2413 rules.
- 2414 ● Options: To create an option contract (by which the offeror provides the offeree with a
2415 defined period of irrevocability), the common law requires that the offeree give the offeror
2416 separate consideration for the option. The UCC allows merchants to make “firm offers”
2417 (effectively option contracts) without the offeree providing separate consideration.
- 2418 ● Modification: To modify an existing contract, the common law requires both parties to
2419 provide new consideration (the “preexisting duty rule”) whereas the UCC only requires that
2420 modifications be made in good faith.

2421 **Task** The UCC vs. Common Law task requires an LLM to determine whether a contract is governed
2422 by the UCC or by the common law.

2423 **Construction Process** The dataset was manually created to test an LLM’s ability to determine
2424 whether a contract is governed by the UCC or by the common law. The dataset is composed of 100
2425 descriptions of simple contracts such as “Alice and Bob enter into a contract for Alice to sell her bike
2426 to Bob for \$50” (UCC) and “Aria pays Owen \$100 to mount a television on the wall of her living
2427 room” (common law). Each description is followed the question, “Is this contract governed by the
2428 UCC or the common law?”

2429 The dataset does not include “mixed purpose” contracts which incorporate both the sale of a good
2430 and a service. For example, a contract in which Alice sells Bob her bike for \$100 and agrees to inflate
2431 the tires each week for the first month would be a mixed purpose contract. To determine whether a
2432 mixed purpose contract is governed by the UCC or the common law, most jurisdictions apply the
2433 “predominant purpose” test under which the predominant purpose of the contract (good or service)
2434 determines which body of law applies.

2435 **Significance and Value** The UCC vs. Common Law task is significant for a number of reasons.
2436 First, it provides a measure of an LLM’s legal reasoning ability relative to a human lawyer (who
2437 would almost certainly score a 100% on the task). Second, it demonstrates an LLM’s ability to
2438 determine the subject matter of a legal text, which has implications for the use of LLMs for legal
2439 tasks far beyond contract classification. Third, this task could prove useful in the context of contract
2440 lifecycle management (CLM) in which a CLM software product could automatically sort contracts by
2441 subject matter for review purposes. Fourth, while the sample contracts in the dataset were simple and
2442 easily identifiable as either UCC or common law contracts, real-world mixed purpose contracts can
2443 be difficult to classify and sometimes generate costly litigation. This task could be used as a starting
2444 point for developing a more fine-tuned task that can classify mixed purpose contracts.

2445 **H Full results**

2446 **H.1 Prompts**

2447 **Base prompts** We manually designed a prompt for each LEGALBENCH task, which we intend to
 2448 release as part of the benchmark. We refer to this as the “base prompt.” The base prompt for each task
 2449 contains an instruction, and between 0-8 in-context demonstrations. Table 51 provides the number
 2450 of demonstrations used for each task. The number of in-context demonstrations we selected was
 2451 influenced by two factors: the size of the task dataset and the length of input sequences. For tasks with
 2452 either small datasets or long input sequences, we used a fewer number of in-context demonstrations.
 2453 When possible, we attempted to ensure that selected demonstrations were class-balanced.

Number of in-context demonstrations	Tasks
0	Canada Tax Court Outcomes, Consumer Contracts QA, Corporate Lobbying, International Citizenship Questions, Rule QA, Supply Chain Disclosure Tasks, SARA (Numeric)
1	MAUD Tasks, SCALR
2	Citation Prediction Tasks
3	Securities Complaint Extraction Tasks
4	Legal Reasoning Causality, Personal Jurisdiction, Successor Liability, SARA (Entailment) Telemarketing Sales Rule, Textualism Tools
5	Abercrombie, Hearsay, Insurance Policy Interpretation, Private Right of Action
6	CUAD Tasks, Diversity Tasks, J.Crew Blocker, Learned Hands Tasks, Overruling, UCC v. Common Law
7	Function of Decision Section, Oral Argument Question Purpose
8	Contract NLI Tasks, Contract QA, Definition Tasks, New York State Judicial Ethics, OPP-115 Tasks, Privacy Policy Entailment, Privacy Policy QA
9	Unfair Terms of Service

Table 51: Number of in-context demonstrations used for each type.

2454 **Application prompts** To elicit LLMs to provide an “explanation” of reasoning (for rule-
 2455 application), we appended “Explain your reasoning step-by-step” to the prompt.

2456 **H.2 Results**

2457 Table 52 reports the balanced accuracy results for all issue spotting tasks.
