

### Claim:

In the last 35 years of global warming, the sun has shown a slight cooling trend.

### The Corresponding Reference

### Original LLM Response:

According to "The Sun's Role in Climate Change" by NASA, while it is true that the Earth has experienced global warming over the last 35 years, the sun's energy output has been measured by satellites since 1978 and the data shows that the sun's energy has been increasing slightly during this time.

### Input

### Step 1

#### Prompts (1...K)

Please provide one reference on this claim whose authenticity is unknown and give a brief summary of it in one paragraph. Claim: <claim>

#### Sampled LLM Responses

#### Independently Query

According to a study conducted by Kopp and Lean in 2011, the sun has exhibited a slight cooling trend during the last 35 years of global warming. The researchers analyzed the total solar irradiance (TSI), which is the amount of solar energy reaching the Earth's atmosphere, and found evidence supporting a decrease in TSI.

### Step 2

#### Prompt

Are there any conflicting parts in these paragraphs P1,P2? P1:<original LLM Response> P2:<sample LLM Response>

#### LLM Responses (K results)

#### Detect Self-Contradiction (K times)

Yes, there is a conflicting part in these paragraphs. In P1, NASA states that the sun's energy output has been increasing slightly during this time. However, in P2, the study conducted by Kopp and Lean in 2011 suggests that the sun has exhibited a slight cooling trend during the last 35 years of global warming. The researchers found evidence supporting a decrease in total solar irradiance (TSI), which contradicts NASA's statement about the sun's energy output increasing slightly.

### Step 3

#### Hallucination Detection

#### Self-Contradiction Results

There exists

Yes, there is a conflicting part in these paragraphs. ....

All are

No, there are no conflicting parts in these paragraphs. ....

Hallucination exists in original LLM Response

Original LLM Response is factual!
