ARTICLES WITH THE TOPIC: AUTOPHAGY

Could molecular handcuffs lower the protein that causes Huntington's disease?
Researchers got surprisingly lucky when looking for drug molecules to pull mutant huntingtin protein into a cellular garbage disposal machine.
By Tamara Maiuri | November 12, 2019

mTORC1 tips the scales in Huntington's disease mice
Huntington's disease is caused by a mutation in a gene that codes for a protein called huntingtin. In mice, this mutation causes a progressive decline in cognitive function and motor control.
By Joseph DeRubeis | January 27, 2020

Exercise increases cellular recycling
Exercise boosts cellular recycling in mice. Could this be why exercise is also good for HD – or even help develop drugs?
By Tony Hannan | May 11, 2012

Focused drug screening leads to improved drugs to increase the rate of cellular recycling
Researchers got surprisingly lucky when looking for drug molecules to pull mutant huntingtin protein into a cellular garbage disposal machine.

Human: Detect words in the photograph:

UReader: ARTICLES WITH THE TOPIC: AUTISM
Could molecular handcuffs lower the protein that causes autism? By Timothy D. Rayne | May 20, 2012 Huntington's disease is a neurodegenerative disorder that causes a progressive decline in cognitive function and motor control. It is caused by a mutation in a gene that codes for a protein called huntingtin.....

Human: What is suggested that molecular handcuffs could lower?

UReader: The protein that causes Huntington's disease

Human: What does exercise increase?

UReader: It increases cellular recycling.
