

## PDE parameter space

✖: Training query points

✕: Test query points

## Parameters trained

Orange box: Offline phase

Green box: Online phase

## Reduced-order modeling

### 1. (Offline) high-fidelity simulation

- Run high-fidelity PDEs simulations on training queries
- Compute a set of bases to approximate solutions

$$\begin{bmatrix} \vdots \end{bmatrix} = \begin{bmatrix} \vdots \end{bmatrix} \Psi_p \begin{bmatrix} \vdots \end{bmatrix}$$

### 2. (Online) low-fidelity simulation

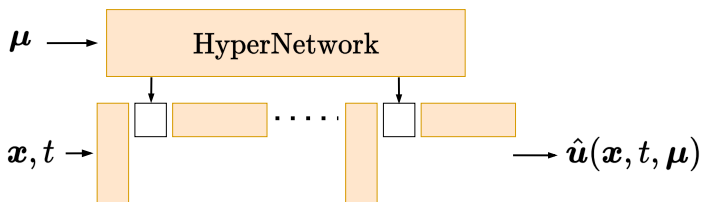

- Compute approximate solutions on test queries
- Compute a set of bases to approximate solutions

$$\begin{bmatrix} \vdots \end{bmatrix} = \begin{bmatrix} \vdots \end{bmatrix} c$$

## Hyper Low-Rank PINNs

### 1. (Offline) training a Hyper-LR-PINN

- Train a hypernetwork and the sets of basis vectors on training queries

### 2. (Online) training a Hyper-LR-PINN

- Fine-tune the diagonal elements of low-rank PINNs on test queries
