

Write a python function to check whether the given array is monotonic or not.

```
# Self-examination with test cases
assert isMonotonic([1, 2, 3, 4, 5]) == True # Increasing sequence,
should return True

assert isMonotonic([5, 4, 3, 2, 1]) == True # Decreasing sequence,
should return True

assert isMonotonic([1, 2, 2, 3, 2]) == False # Non-monotonic
sequence, should return False
```

```
# Basic test cases
assert isMonotonic([1, 2, 3, 4, 5]) == True # Increasing sequence
assert isMonotonic([5, 4, 3, 2, 1]) == True # Decreasing sequence
assert isMonotonic([1, 2, 2, 3, 2]) == False # Non-monotonic
sequence

# Edge test cases
assert isMonotonic([1]) == True # Single-element sequence
assert isMonotonic([]) == True # Empty sequence
assert isMonotonic([1, 2]) == True # Two-element increasing
sequence
assert isMonotonic([2, 1]) == True # Two-element decreasing
sequence
assert isMonotonic([1, 1, 1, 1, 1]) == True # All elements are equal,
considered monotonic
assert isMonotonic([1, 1, 1, 2, 1]) == False # Mixed values, not
monotonic

# Large input
large_input = [i for i in range(1, 100001)] # An increasing sequence of
100,000 elements
assert isMonotonic(large_input) == True # Should be considered
monotonic

# Create a large decreasing sequence
large_decreasing_input = [i for i in range(100000, 0, -1)] # A
decreasing sequence of 100,000 elements
assert isMonotonic(large_decreasing_input) == True # Should be
considered monotonic
```
