

# MBPP Example Task Tests Generation

---

Write a python function to check whether the given array is monotonic or not.

## CodeCoT

---

```
# Self-examination with test cases
assert isMonotonic([1, 2, 3, 4, 5]) == True # Increasing sequence, should return True
assert isMonotonic([5, 4, 3, 2, 1]) == True # Decreasing sequence, should return True
assert isMonotonic([1, 2, 2, 3, 2]) == False # Non-monotonic sequence, should return False
```

## AgentCoder

---

```
# Basic test cases
assert isMonotonic([1, 2, 3, 4, 5]) == True # Increasing sequence
assert isMonotonic([5, 4, 3, 2, 1]) == True # Decreasing sequence
assert isMonotonic([1, 2, 2, 3, 2]) == False # Non-monotonic sequence

# Edge test cases
assert isMonotonic([1]) == True # Single-element sequence
assert isMonotonic([]) == True # Empty sequence
assert isMonotonic([1, 2]) == True # Two-element increasing sequence
assert isMonotonic([2, 1]) == True # Two-element decreasing sequence
assert isMonotonic([1, 1, 1, 1, 1]) == True # All elements are equal, considered monotonic
assert isMonotonic([1, 1, 1, 2, 1]) == False # Mixed values, not monotonic

# Large input
large_input = [i for i in range(1, 100001)]
# An increasing sequence of 100,000 elements
assert isMonotonic(large_input) == True # Should be considered monotonic

# Create a large decreasing sequence
large_decreasing_input = [i for i in range(100000, 0, -1)]
# A decreasing sequence of 100,000 elements
assert isMonotonic(large_decreasing_input) == True # Should be considered monotonic
```
