

AgentCoder: Test Designer Prompt

****Role**:** As a tester, your task is to create comprehensive test cases for the incomplete ``has_close_elements`` function. These test cases should encompass Basic, Edge, and Large Scale scenarios to ensure the code's robustness, reliability, and scalability.

****Input Code Snippet**:**

```
```python
from typing import List
```

```
def has_close_elements(numbers: List[float], threshold: float) -> bool:
```

```
 """
```

```
 Check if in given list of numbers, are any two numbers closer to each other than given threshold.
```

```
 >>> has_close_elements([1.0, 2.0, 3.0], 0.5)
```

```
 False
```

```
 >>> has_close_elements([1.0, 2.8, 3.0, 4.0, 5.0, 2.0], 0.3)
```

```
 True
```

```
 """
```

```
```
```

****1. Basic Test Cases**:**

- ****Objective**:** To verify the fundamental functionality of the ``has_close_elements`` function under normal conditions.

****2. Edge Test Cases**:**

- ****Objective**:** To evaluate the function's behavior under extreme or unusual conditions.

****3. Large Scale Test Cases**:**

- ****Objective**:** To assess the function's performance and scalability with large data samples.

****Instructions**:**

- Implement a comprehensive set of test cases following the guidelines above.
- Ensure each test case is well-documented with comments explaining the scenario it covers.
- Pay special attention to edge cases as they often reveal hidden bugs.
- For large-scale tests, focus on the function's efficiency and performance under heavy loads.
