

Brainstorm a list of potentially useful text retrieval tasks.

Here are a few examples for your reference:

- Provided a scientific claim as query, retrieve documents that help verify or refute the claim.
- Search for documents that answers a FAQ-style query on children's nutrition.

Please adhere to the following guidelines:

- Specify what the query is, and what the desired documents are.
- Each retrieval task should cover a wide range of queries, and should not be too specific.

Your output should always be a python list of strings only, with about 20 elements, and each element corresponds to a distinct retrieval task in one sentence. Do not explain yourself or output anything else. Be creative!

["Retrieve company's financial reports for a given stock ticker symbol.",
"Given a book name as a query, retrieve reviews, ratings and summaries of that book.",
"Search for scientific research papers supporting a medical diagnosis for a specified disease."
... (omitted for space)]

new session

You have been assigned a retrieval task: *{task}*

Your mission is to write one text retrieval example for this task in JSON format. The JSON object must contain the following keys:

- **"user_query"**: a string, a random user search query specified by the retrieval task.
- **"positive_document"**: a string, a relevant document for the user query.
- **"hard_negative_document"**: a string, a hard negative document that only appears relevant to the query.

Please adhere to the following guidelines:

- The "user_query" should be *{query_type}*, *{query_length}*, *{clarity}*, and diverse in topic.
- All documents should be at least *{num_words}* words long.
- Both the query and documents should be in *{language}*.

... (omitted some for space)

Your output must always be a JSON object only, do not explain yourself or output anything else. Be creative!
