

Prompt Template of GenerateArgs(**T**, **Q**, **f**)

```
{ OPERATION_INSTRUCTION (f) }
```

```
{ SERIALIZED_TABLE (T) }
```

```
Question: { QUESTION (Q) }
```

```
Explanation:
```

```
{ EXPLANATION }
```

```
The answer is: { OPERATION_AND_ARGUMENTS }
```

// Parse LLM generation with pre-defined regular expressions to extract arguments.

When $f = f_add_column()$:

The answer is: $f_add_column(\text{Country})$. The value: **ESP, RUS, ...**

When $f = f_select_row()$:

The answer is: $f_select_row(\text{row 1, row 2, row 3...})$

When $f = f_select_column()$:

The answer is: $f_select_column(\text{Country, Rank})$

When $f = f_sort_by()$:

The answer is: $f_sort_by(\text{Count})$. The order is **from-large-to-small**.

When $f = f_group_by()$:

The answer is: $f_group_by(\text{Country})$
