

Object-Oriented Programming (OOP)

Prompt:

Question: Given a positive integer **n**, return the number of groups of consecutive positive integers that satisfy the sum of all numbers equals **n**;

Based on the above question, please create a class **SNS** in Python, which has an attribute **n**. Then create another class **SN_SNS** that inherits from the **SNS** class, and add a public function **Sum_Numbers** to return the number of groups of consecutive positive integers that satisfy the sum of all numbers equals **n**.

Class, Encapsulation, Properties, Public function,
Private function, Inheritance
