

# MBPP

## Prompt:

You are an expert Python programmer, and here is your task:

...

Write a function to check if the given tuple list has all k elements. Your code should pass these tests:

```
["assert check_k_elements([(4, 4), (4, 4, 4), (4, 4), (4, 4, 4, 4), (4, )], 4) ==  
True", "assert check_k_elements([(7, 7, 7), (7, 7)], 7) == True", "assert  
check_k_elements([(9, 9), (9, 9, 9, 9)], 7) == False"]  
[BEGIN]
```
