

Object-Oriented Programming (OOP)

Prompt:

First, write a class named **STR** in Python, which has an instance attribute, **s**, and a public function named **without_duplicates**. In the public function **without_duplicates**, based on the instance attribute **s**, find the length of the longest substring without duplicate characters. Next, create a class named **SUB_STR** that inherits from the **STR** class and add a public function named **without_duplicates**. In the public function **without_duplicates** of the **SUB_STR** class, find the maximum distance between repeated characters in the instance attribute **s**.
