

Object-Oriented Programming (OOP)

Prompt:

Firstly, design a class named **MS** using the Python language, which has instance attributes **word1** and **word2**, a private function **private_Minimum_Steps**, and a public function **public_Minimum_Steps**. Then, in the private function **private_Minimum_Steps**, return the minimum number of steps required to make **word1** and **word2** identical. Finally, in the public function **public_Minimum_Steps**, call the private function **private_Minimum_Steps** to return the result.

class, properties, public function, private function
