

Ref.	Focus	Limitation of Traditional Methods	GAI-based Solution
[71]	Physiological data acquisition	Time-consuming and costly	Proposed a GAN-based approach, SynSigGAN, to generate synthesized PPG data
[73]			Proposed a diffusion model-based approach, structured state space diffusion-ECG, to generate ECG data
[76]	Medical imaging data acquisition	Costly, as well as patient discomfort and safety concerns	Proposed a diffusion model-based approach to generate histopathology image data
[61]			Proposed a normalizing flows-based approach to generate chest x-ray and skin cancer images
[50]	Motion data acquisition	Limited number of motion sensors equipped in the human, and the poor transmission comprises the collected motion data	Proposed a VAE-based approach to generate full-body motion using collected impoverished motion data
[81]			Proposed a diffusion model-based approach to generate the full-body poses conditioned on the sparse tracking motion data
