

Query	Answer
How to create a Class of primitive array	<code>java.lang.Class.forName()</code>

Example	
How to create a String of an array	<code>java.util.Arrays.toString()</code>

Reason
<p>First, conduct intent exploration on the reformulated query. Its action is 'create', object is 'an array', target is 'a String', condition is 'in Java'. Second, perform knowledge detection on Java official API documentation based on the intent. The suitable description is 'returns a string representation of the contents of the specified array'. Therefore, the recommended API is 'java.util.Arrays.toString()'.</p>
