

Query	Answer
How to create a Class of primitive array	java.lang.Class.forName()
Example	
How to create a String of an array	java.util.Arrays.toString()

**Reasoning Prompt**

(1) Task intent of the query. Action is ‘create’; Object is ‘an array’; Target is ‘a String’; Condition is ‘in Java’.

(2) Factual knowledge of the API. Functional description is ‘returns a string representation of the contents of the specified array’. Functionality category is ‘get/return/obtain’.

(3) Fine-grained Match. First, ‘create’ belongs to the category. Next, ‘an array’ aligns with ‘the specified array’, ‘a String’ aligns with ‘a string representation’, ‘in Java’ aligns with the Java API.

Therefore, the recommended API is ‘java.util.Arrays.toString()’.
