

[Query]

How do I convert a String to an int in Java?

[Reasoning Prompt]

First, conduct intent exploration on the reformulated query 'Convert a String to an int in Java'. Its action is 'convert', object is 'a String', target is 'an int', condition is 'in Java'.
Second, perform knowledge detection on Java official API documentation. The suitable description is 'parse the string argument as a signed decimal integer', as it aligns with four elements of task intent.
Therefore, the recommended API is 'java.lang.Integer.parseInt()'.

[Recommended API]

java.lang.Integer.parseInt()

...

Please recommend some suitable APIs for the given query.
