

Intermediate solution

Problem: Write a Python program to calculate the Fibonacci Number. \n\n**Solution:**\n`def fibonacci(n):\n\tif n == 1:`

Completion by
reasoner

```
def fibonacci(n):  
    if n == 1:  
        return 1  
    elif n == 2:  
        return 1  
    return fibonacci(n - 1) +  
        fibonacci(n - 2)
```

Pass

```
def fibonacci(n):  
    if n == 1:  
        return 1  
    elif n == 2:  
        return 2  
    return fibonacci(n - 1) +  
        fibonacci(n - 2)
```

Fail

```
def fibonacci(n):  
    if n == 1:  
        return 1  
    fnm1 = fibonacci(n - 1)  
    fnm2 = fibonacci(n - 2)  
    return fnm1 + fnm2
```

Fail
