

Math

Problem: Find roots of $f(x) = x^2 + 2x - 3$.

Solution:

Notice that the function $f(x)$ is quadratic.
We therefore apply the quadratic formula ...
Plugging in the values $a = 1$, $b = 2$, ...
...
So, the roots of the function $f(x)$ are 1 and -3.

Coding

Problem: Calculate the nth Fibonacci Number.

Solution:

```
def fibonacci(n):  
    if n == 1:  
        return 1  
    elif n == 2:  
        return 1  
    return fibonacci(n - 1) + fibonacci(n - 2)
```

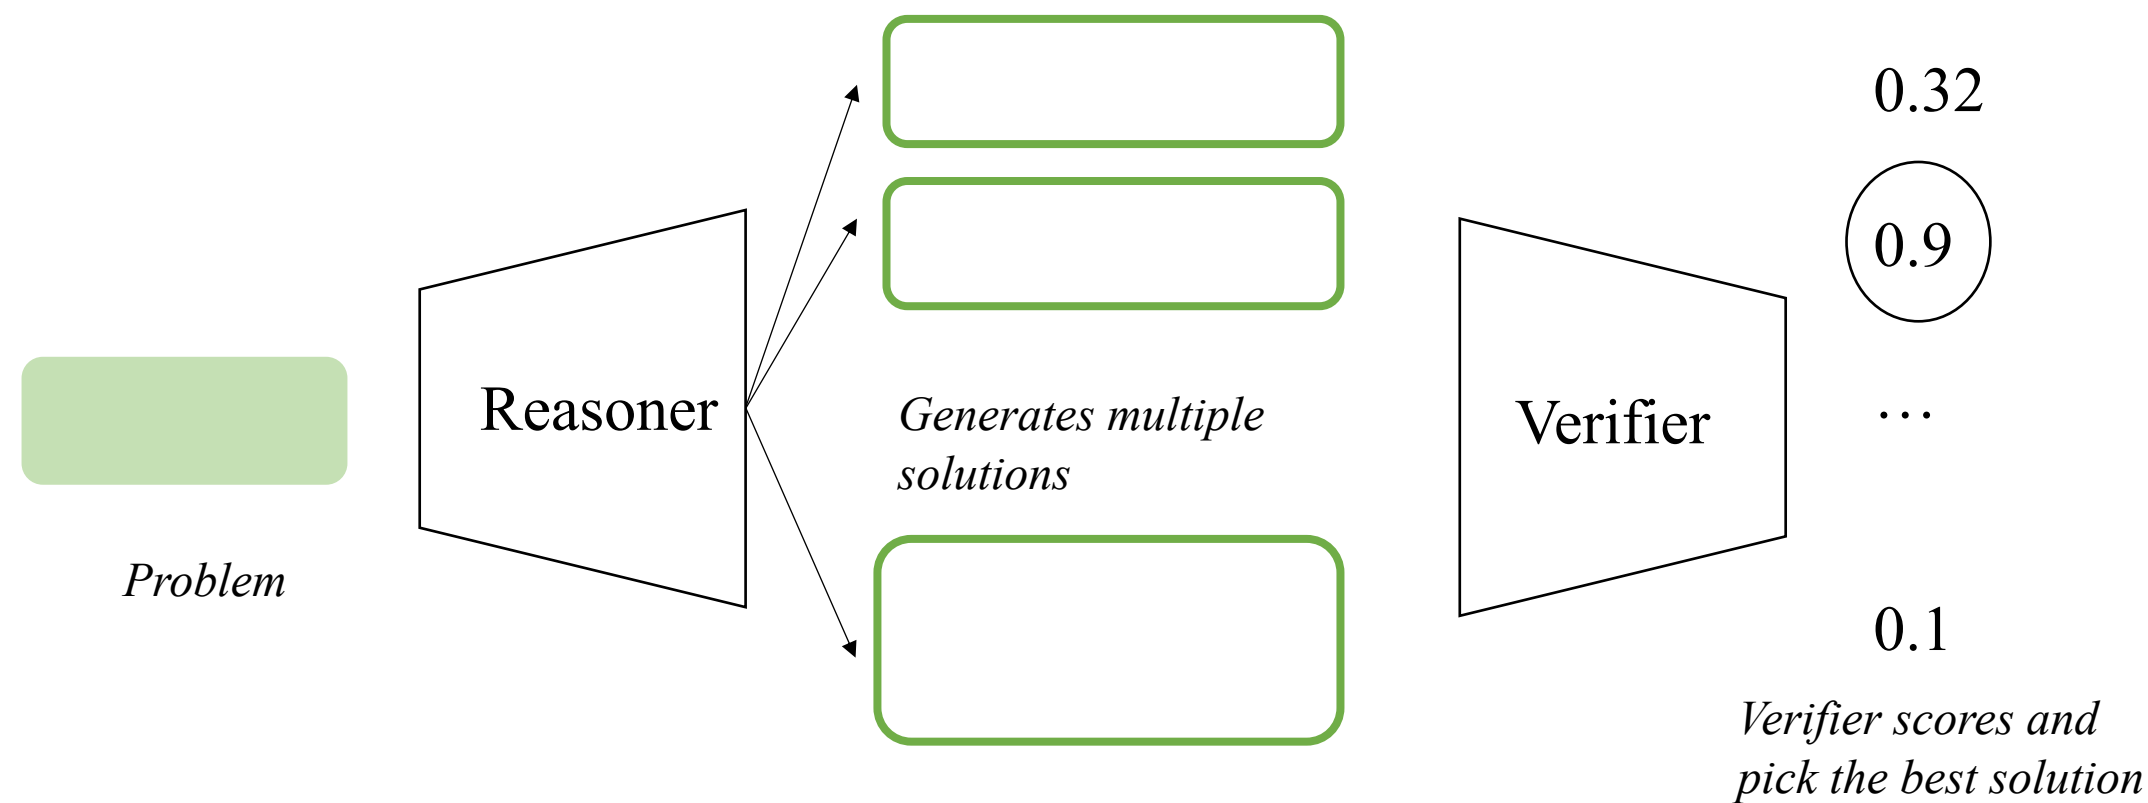

Verification

Acc.

No Verification	61.0
Self Consistency (k = 32)	77.0
Self Consistency (k = 128)	77.6
FT + No Verification	61.7

(b) PaLM 2-S accuracy on GSM8K before/after fine-tuning on the training set

(a) Math and Coding Multi-step Problem Solving Example

Self Consistency Verifier

$$\begin{cases} 1.0 & \text{if } solution_i = \text{most_common}(solution_i) \\ 0.0 & \text{otherwise.} \end{cases}$$

LLM-as-a-Verifier

Prompt an LLM to pick the better solution.

Trained Verifier

Train a model to predict the score of a solution

(c) The Reasoner-Verifier Setup and Common Paradigms

```
def fibonacci(n):  
    if n == 1:  
        return 1  
    elif n == 2:  
        return 2  
    return fibonacci(n - 1) + fibonacci(n - 2)
```

MiPS Data

Training Objective:
Predict the Accuracies

Aggregation Function:
 $\max(\text{predictions}) = 0.56$

Verifier

predict

0.56 0.37 0.02 0.11

(f) Process Supervised Verifier

(d) Output/Process Supervision

return fibonacci(n - 1) + fibonacci(n - 2) Step 6

Example of Math and Coding Multi-step Problem Solving

Performance (accuracy %) of our base model on gsm8k, without and with continue training.

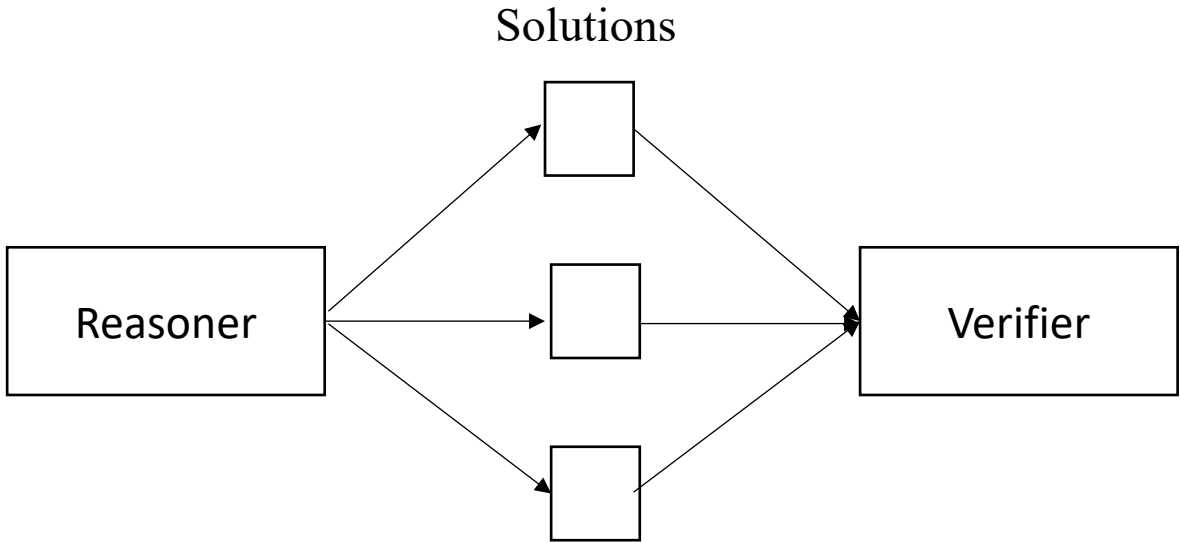

(c)

c.1 Self-Consistency.

Reasoner is *most common(solutions)*

c.2 LLM-as-a-verifier

Reasoner is *LLM("Is this correct?" + Solution)*

The Inference-time Verification Framework.

c.3 Self-Correction

Reasoner is *LLM("Is this correct?" + Solution. If not suggest improvements.)*

And the reasoner continues solves the problem with new improvements.

c.2 Trained Verifier

Reasoner is *argmax_{solution} model(solution)*

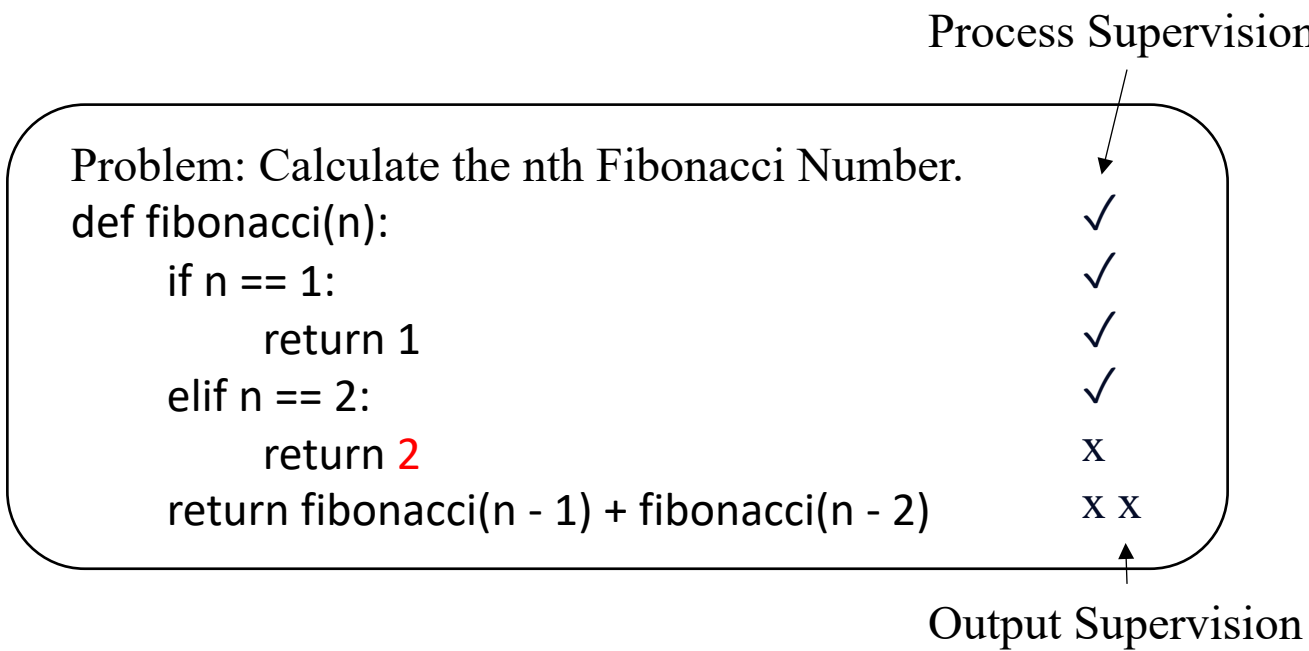

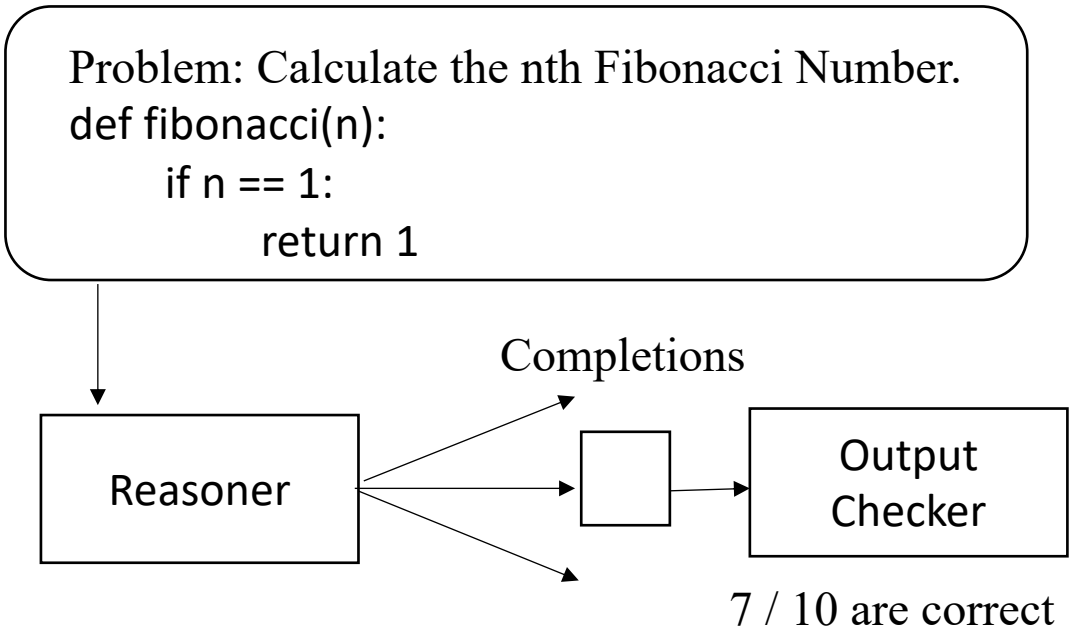

Illustration of Process Supervision and Output Supervision

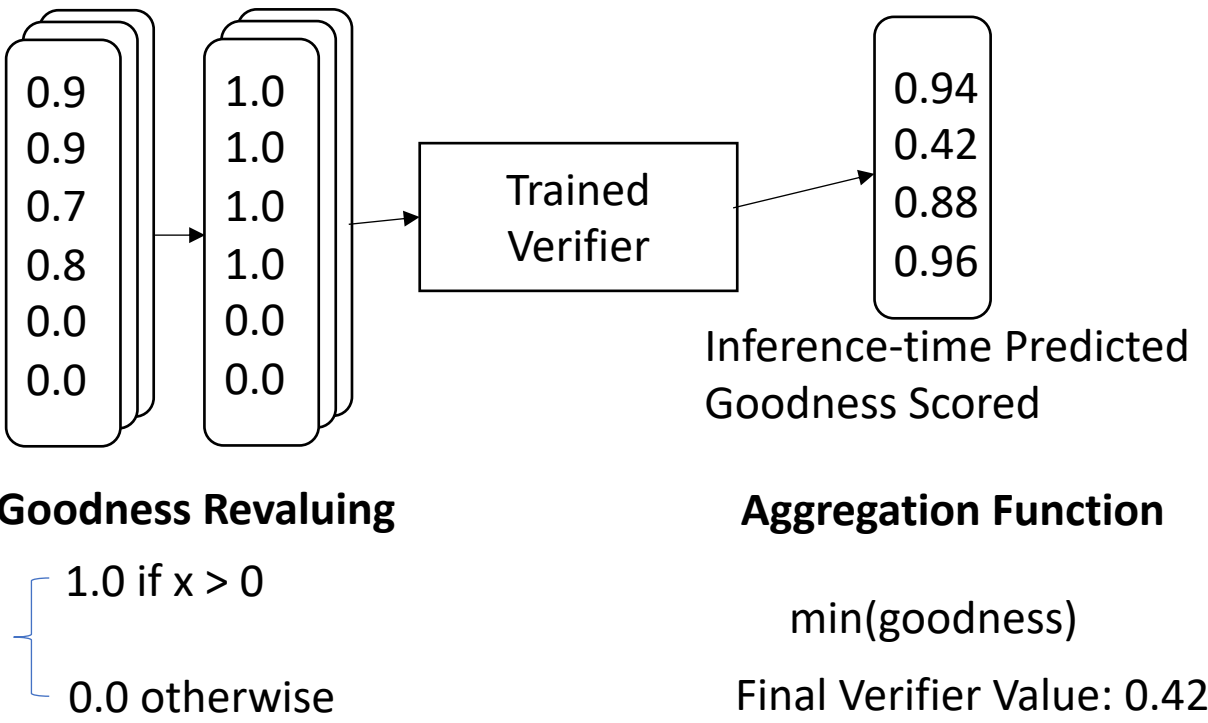

(d)

Correctness of the 6 steps: [0.9, 0.9, 0.7, 0.8, 0.0, 0.0]
