

Source	Summary Sentence	Annotator A (Label/Comments)	Annotator B (Label/Comments)
Loretta Lynch was nominated as the first African-American woman to become Attorney General in November 2014, but after being confirmed by the Judiciary Committee has yet to receive a full Senate vote. Already the wait has lasted longer for Lynch than any previous nominee to any cabinet position has waited in the last thirty years; by the time the Senate returns from recess on Monday, that period will have been longer than the wait time for the previous eight nominees combined. Senators from both parties have cited different reasons for the delay, with some blaming the Senate’s focus on the stalled trafficking bill, and other attributing the slow progress to retaliation against President Obama’s 2014 immigration actions.	Loretta Lynch was nominated as the first African-American woman to become Attorney General in November 2014, but after being confirmed by the Judiciary Committee has yet to receive a full Senate vote.	Intrinsic (The confirmation is in limbo.)	Extrinsic (Source does not mention nomination year.)
<p>The judges said Neurotribes: The Legacy of Autism and How to Think Smarter About People Who Think Differently was a "tour de force" of journalistic and scientific research.</p> <p>It is the first popular science book to win the prize in its 17-year history.</p> <p>The shortlist had included Jonathan Bate's Ted Hughes: The Unauthorised Life and Robert Macfarlane's Landmarks.</p> <p>Historian Anne Applebaum, chair of the judges, praised Silberman's "compassionate journalism" and said he excelled at using stories and anecdotes to explain complex medical issues to a wide audience.</p> <p>The American author, who is based in San Francisco, has been a science writer for Wired and other magazines such as the New Yorker, the MIT Technology Review, Nature and Salon for more than 20 years.</p> <p>"We admired Silberman's work because it is powered by a strongly argued set of beliefs: that we should stop drawing sharp lines between what we assume to be 'normal' and 'abnormal', and that we should remember how much the differently-wired human brain has, can and will contribute to our world," Applebaum said.</p> <p>"He has injected a hopeful note into a conversation that's normally dominated by despair."</p> <p>Neurotribes, she added, was "a tour de force of archival, journalistic and scientific research, both deeply researched and widely accessible".</p> <p>In its review of Silberman's book, The Guardian described Neurotribes as "a gripping narrative written with journalistic verve".</p> <p>The £20,000 Samuel Johnson Prize was won last year by Helen Macdonald's H is for Hawk.</p>	A book by science writer and journalist Jeffrey Silberman has won the Samuel Johnson Prize for the best book in the English language.	Intrinsic ("in the English language" is a stretch and not mentioned in the article.)	Extrinsic (Silbermans first name is not mentioned.)
