

Periodic table

Atom type:	<input type="button" value="C"/>	<input type="button" value="N"/>	<input type="button" value="O"/>
# Bonds:	<input type="button" value="4"/>		
Charge:	<input type="button" value="0"/>		
Hybridization:	<input type="button" value="sp"/>	<input type="button" value="sp2"/>	<input type="button" value="sp3"/>

Bond type:	<input type="button" value="single"/>	<input type="button" value="double"/>	<input type="button" value="triple"/>
Conjugated:	<input type="button" value="true"/>	<input type="button" value="false"/>	
In ring:	<input type="button" value="true"/>	<input type="button" value="false"/>	

(a) Atom-bond property

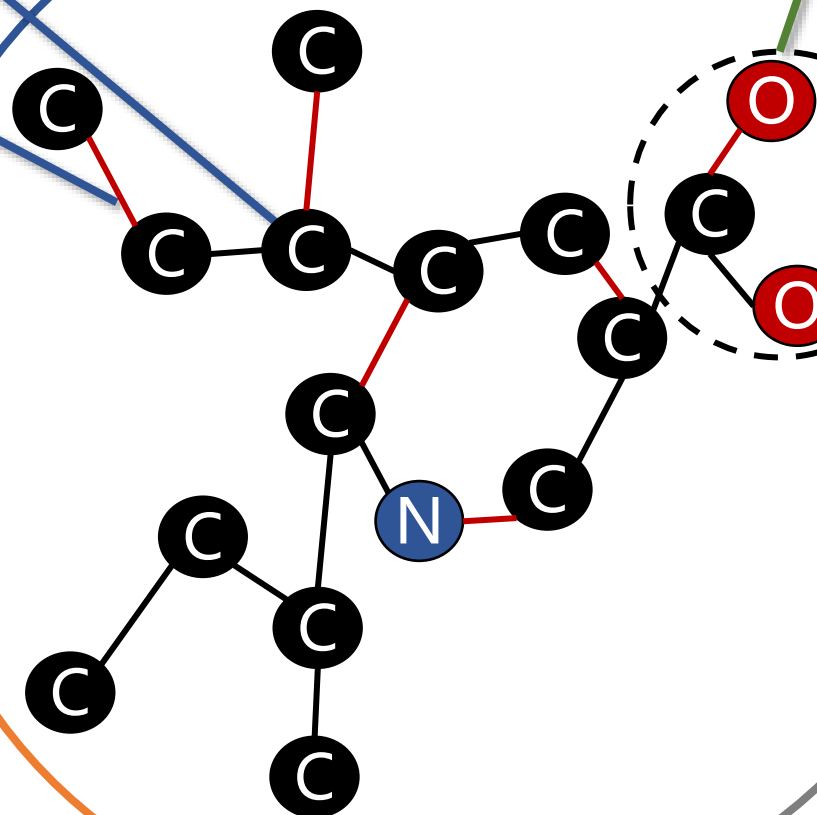

Carboxyl Group

Formula:

Aromaticity:

Biological Activity:

(b) Molecular substructure

<input type="button" value="Biophysics"/>	<input type="button" value="Physical chemistry"/>
<input type="button" value="Quantum mechanics"/>	<input type="button" value="Physiology"/>

Solubility

2.17g/100mL

Absorption rate

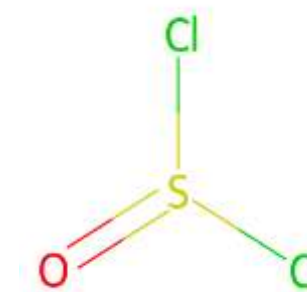

Approximately 99% absorbed within 45 minutes post-ingestion.

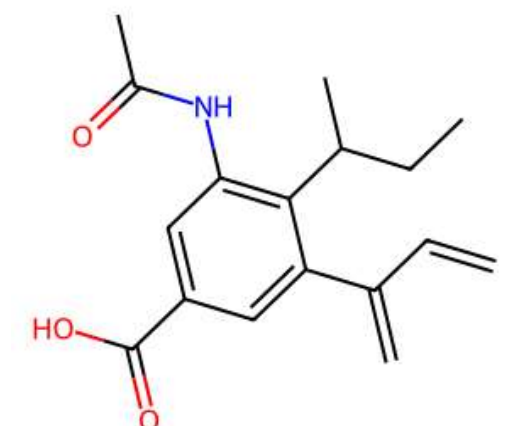

(c) Molecular property

Chemical Reaction Synthesis

$HCl + SO_2$
Product

$SOCl_2$
Reactant

$C_{14}H_{17}NO_2$
Reactant

(d) Chemical reaction
