... These high-resolution state-dependent ensembles are then used to parameterize the background errors and generate 3D aerosol increments. The algorithm has computational complexity running at a resolution of 1/4 degree, globally. We will present the result of # Dynamical response of Mediterranean precipitation to greenhouse gases and aerosols # Tang # Full Text Available Atmospheric aerosols and greenhouse gases affect cloud properties, radiative balance and, thus, the hydrological cycle. Observations show that precipitation has decreased in the Mediterranean since the beginning of the 20th century, and many studies have investigated possible mechanisms. So far, however, the effects of aerosol forcing on Mediterranean precipitation remain largely unknown. Here we compare the modeled dynamical response of Mediterranean precipitation to individual forcing agents in a set of global climate models (GCMs). Our analyses show that both greenhouse gases and aerosols can cause drying in the Mediterranean and that precipitation is more sensi

... vement in this particular terrain. Perhaps the lion has evolved a distinct montane version, specifically adapted for success in this very different habitat from the lion's more typical savannah home. # Supporting this possibility is the apparent existence of comparable mystery cats in other mountain ranges in East and Central Africa. Here they are referred to variously as the ntarargo (in Uganda), ikimizi (in Rwanda), bung bung (Cameroon), and abasambo (Ethiopia). # WINGED CATS # The concept of domestic cats with wings would normally be confined to fantasy books and 'silly season' tabloid stories, were it not for the remarkable fact that such creatures are unquestionably real. As the world's leading investigator of winged cats, I have revealed and documented dozens of verified cases from around the world. One of the earliest, and still among the most famous, cases was that of a kitten from Wiveliscombe in Somerset, which was photographed in the Strand Magazine in November 1899, clearly revealing a pair of large fluffy wing-like exten

... company to build. Can you talk a little bit about that process and how it works? # Yeah, absolutely. To be honest, those outcomes are really well-defined, but they're constantly in flux. So I can tell you what we think are the most important things now, but they constantly change in terms of relative importance and relative confidence. # So inside of this idea of net-zero transition for us, there are sort of five key requirements that we're currently working on. One is that we need to remediate historical emissions. Another is that we need to reduce the emissions going into the future. A third is that we need to find a way of eliminating the sunk cost in the oil and gas industry and making it easy for that huge wealth of assets to move across. A fourth is that we need to kind of oil the work so the financial sector, is such that we see huge influxes of capital into the space. And a fifth is that we need to generate energy and create energy systems that are capable of holding renewable energy successfully. So under each of those, we

... ften colonies of up to half a dozen squat urchin in shrimp of varying sizes will all share the same urchin. Beyond its circumtropical distribution and perfect camouflage, the squat urchin shrimp further demonstrates its successfulness by feeding upon the epidermal tissue of the very spines that grant it protection. This is a relatively benign form of parasitism that doesn't seem to bother the urchin. These shrimp will also feed opportunistically upon detritus that the urchin picks up as it moves along the sea floor. The squat urchin shrimp is a creature that has found a near perfect niche in a truly y-self-sustaining, self-contained world of spines. # ZEOvit has just released the latest in their Dream Tank of the Quarter Series. Yoon Yeo Kwang's 106 gallon tank displays beautiful colors, and diversity. Check out the tank details and info below. # Please join us on Sat June 19, 2010 from 4:00 pm to 11 ??? for the BRK/WAMAS Social event!! # John has been a great sponsor and supporter of the club and its members, donating to meetings and benefits.

... ground into powder, mixed with water until foamy, and then stirred with gold or silver spoons until drunk. This was an especially common recipe in Mesoamerica. The entry then declares that this drink is the "most wholesome and substantial of any food or beverage in the world, whoever drinks a cup of this liquor can go thru a whole day without taking anything else even if on a cross country journey" (C-Spot). This account clearly relates cacao's function as a hearty beverage with a substantial amount of nutritional value. However, the function of cacao changes in the 1580s when it contributes to the humoral theory of medicine in that its "hot" nature combats poison, alleviates intestinal discomfort, and cures a variety of other ailments (Co e 122). This functional form sticks with chocolate into the 1600s where its increasing demand eventually leads to European plantations in the Caribbean that operate to ensure a steady supply of cacao for the European elite. In fact, the elite were so flogged by chocolate that in 1657 the first chocola

... s # 6: Match to data: corresponds to the ~5 microns Opher's team has reported in Nature. # As Craig that I totally disagree with the NASA article. # The fact that the Fluff is strongly magnetized means that other clouds in the galactic neighborhood would be, too. Eventually, the solar system will run into some of them, and their strong magnetic fields could compress the heliosphere even more than it is compressed now. Additional compression could allow more cosmic rays to reach the inner solar system, possibly affecting terrestrial climate and the ability of astronauts to travel safely through space. # This doomsday scenario is presented as the only possibility. This thought-line is based on an assumed understanding of these materials that they refer to as "Fluff." Please re-acknowledge that this article explicitly states that neither Voyager 1 nor Voyager 2 has yet come in contact with this "Fluff." # The assumption also seems to be that the magnetism that has been recorded is an innate aspect of the cloud. But, let us remember that t
