

## Paired Preference Data

What is  $(3 + 5) / 2$ ?

... $3+5=7$ ...

<

... $3+5=8$ ...

### DPO (Rafailov et al. 2023)

incentivise:  $\log\text{-prob on preferred} > \log\text{-prob on dispreferred}$

### DPOP (ours)

incentivise: (i)  $\log\text{-prob on preferred} > \log\text{-prob on dispreferred}$   
**and** (ii)  $\log\text{-prob on preferred} \geq \text{ref } \log\text{-prob on preferred}$
