

Section 2	Mathematical Formulation of Convolutions					Convolutional Operations in Deep Learning				
Section 3	Convolutional Layers and Their Functionality					Pooling Layers and Feature Reduction				
	Activation Functions in CNNs					Batch Normalization Layer in CNNs				
Section 4	Traditional 2D Convolutions			1D Convolutions			Grouped Convolutions			
	3D Convolutions for Volumetric Data					Dilated Convolutions and Their Advantages				
Section 5	Deconvolutions and Upsampling			Depthwise Separable Convolution			Spatial Pyramid Pooling			
	Attention Mechanisms in Convolutions					Shift-Invariant and Steerable Convolutions				
	Capsule Networks			Neural Architecture Search			Generative Adversarial Networks			
Section 6	Image Recognition and Classification			Object Detection and Localization			Natural Language Processing			
	Audio Processing and Speech Recognition					Medical Image Analysis				
Section 7	Computational Complexity of Different Convolutions					Trade-offs between Accuracy and Speed				
	Memory and Storage Requirements					Benchmarking on Standard Datasets				
Section 8	Interpretability and Explainability of CNNs			Incorporating Domain Knowledge		Robustness and Adversarial Defense		Multi-Task Learning and Transfer Learning		
	Efficient Model Design			Integration with Uncertainty Estimation		Generalization to Small Data Regimes				
Section 9	Keras	Tensorflow	Caffe	Pytorch	MxNet	OpenCV	Deeplearning4j	Chainer		
Section 10	Main Research Fields			Section 11		Discussion		Section 12		Conclusion
