

Task Description

- Given a list of numbers, return *whether or not they are sorted in ascending order*.
- If list has *more than 1 duplicate of the same number*, return *False*.

Visible Test Cases

Input: `lst=[1,2,2,3,3,4]`
Expected Output: `True`

Seed Program

```
def is_sorted(lst):  
    for i in range(len(lst)-1):  
        if lst[i]>lst[i + 1]:  
            return False  
    return not any(lst.count(x) > 1  
                   for x in lst)
```

Actual Output: `False`

Large Language Model Debugger (LDB)

Segment Program into Basic Blocks & Feed in *Visible* Test Case

[BLOCK-0]

Before: `lst=[1,2,2,3,3,4]`

```
for i in range(len(lst)-1):  
    if lst[i] > lst[i + 1]:
```

After: `i=0,`
`lst=[1,2,2,3,3,4]`

[BLOCK-1]

Before: `i=0,`
`lst=[1,2,2,3,3,4]`

```
for i in range(len(lst)-1):  
    if lst[i] > lst[i + 1]:
```

After: `i=1,`
`lst=[1,2,2,3,3,4]`

[BLOCK-5]

Before: `i=4,`
`lst=[1,2,2,3,3,4]`

```
return not any(lst.count(x)>1  
               for x in lst)
```

After: `i=4, lst=[1,2,2,3,3,4],`
`_ret=False`

Query LLM to Verify Correctness of Each Block Step by Step

[Verdict-0]

The block is **Correct**

Explanation: The block initializes the variable `lst` and `i` correctly.

[Verdict-1]

The block is **Correct**

Explanation: The block correctly checks if the current element ...

[Verdict-5]

The block is **Incorrect**

Explanation: The task requires To fix this issue, we should **change the condition to `lst.count(x)>2`** consider the original occurrence of the number in the list.
