

Step 1 (Profiling § 2.2)

Run static analysis to build CFG

Step 0

Generate seed programs w/ a LLM

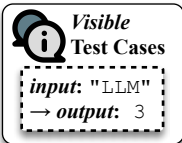

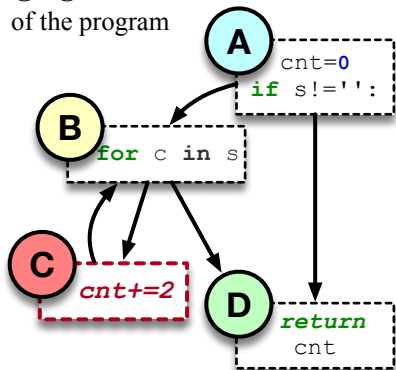

Step 4

(Regeneration § 2.4)
Refine the program based on the task description and debugger response

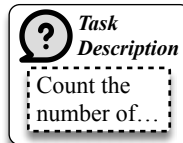

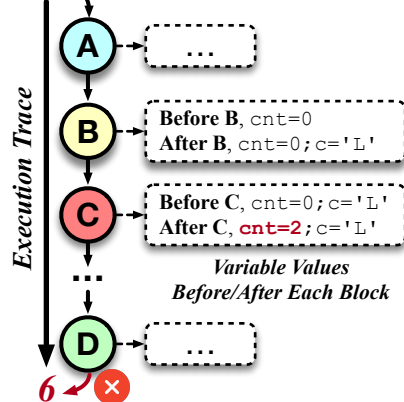

Control Flow Graph

Ⓐ~Ⓓ are control blocks of the program

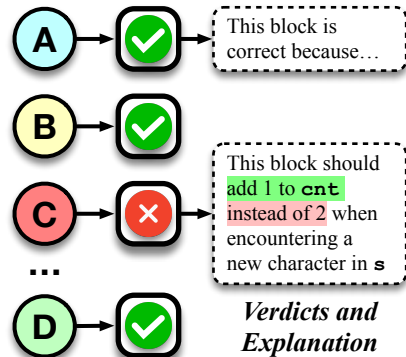

Step 2
(Profiling § 2.2)
Input visible test cases & acquire execution trace

Intermediate States

Step 3
(Debugging § 2.3)
Query LLMs to verify each block based on the task

Debugger Response

Verdicts and Explanation
