

Calculate max path sum in grid,  
only right or down moves allowed

```
n, m = len(a), len(a[0])
f = np.zeros((n + 1, m + 1))
for i in range(1, n + 1):
    for j in range(1, m + 1):
        v = max(f[i-1,j], f[i,j-1])
        f[i, j] += v
print(f[n, m])
```

Algorithmic Block Completion

Calculate  $(a \wedge b) \bmod m$  for  
large positive integers  $a, b, m$

```
result = 1
while b > 0:
    if b % 2:
        result = (result * a) % m
    a = (a * a) % m
    b //= 2
print(result)
```

Control-Flow Completion

Define word embedding & learned  
positional embedding layers

```
d_model = args.model_dim
n_words = args.vocab_size
max_len = args.max_src_len
self.word_emb = nn.Embedding(
    n_words, d_model)
self.pos_emb = nn.Embedding(
    max_len, d_model)
```
