

## I. LLM Rationale Probing

Given a document and its ground-truth summary, do the following tasks:

- (1) According to the ground-truth summary, extract **essential aspects** of the document.
- (2) For each **essential aspect**, retrieve detailed **triples** in the format **[ENTITY1 | RELATION | ENTITY2]** used to compose the ground-truth summary.
- (3) With the retrieved **triples**, compose a **summary** of the document.

## II. Golden Rationale Selection

**Summary Score**  $\nabla_i^S$

$$[S_i] \stackrel{\cos}{\sim} [S_{gt}] + [S_i] \stackrel{\cos}{\sim} ([A_i] \oplus [T_i])$$

**Coherency Score**  $\nabla_i^C$

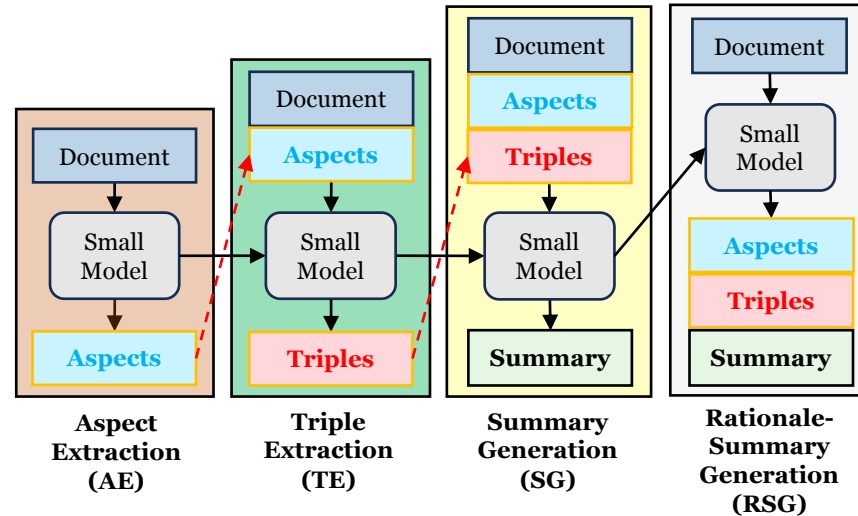

$$[A_i] \stackrel{\text{LDA}}{\underset{\text{KL}}{\sim}} [D] - ([A_i] \oplus [T_i]) \stackrel{\text{LDA}}{\underset{\text{KL}}{\sim}} [D]$$

**Argmax**

**Golden Rationale**

## III. Curriculum Learning (Local Training)

**Curriculum**

$[t_0, t_1]$  : singular-task learning  
 $[t_1, t_2]$  : concurrent learning (early)  
 $[t_2, t_3]$  : concurrent learning (late)  
 $[t_3, t_4]$  : joint learning
