Not long ago, my wife and I borrowed a 2020 Y for a weekend. The ride quality is very comfortable. We are considering buying a new Y.

user-1 favor

Can't compare to previous years, but my 22 Model Y drives fantastic. Not rough at all.

user-2 against

I think my 2022 model Y is a very rough driving vehicle. I am comparing it to my BMW X.3 some folks think it's fine. Well, I think it is pretty terrible.

user-3 favor

For a comparison of the two, I'm more likely to choose the former.

user-4 against

I came from a BMW X.3 2019. It was a great vehicle. My only problem is long term reliability, but I think your choice is worse.

Its autopilot saves you from boring driving. Plus, the convenience of Tesla's autopilot system is a game-changer for long road trips!

user-6 against

It is very unsafe, and I don't think this option is the right one and suggest you try more. While some people love the autopilot feature, it's important to test it thoroughly to make sure it suits your driving style and needs.

user-7 favor

Statistically, autonomous driving is safer than some human driving. Indeed, studies have shown that autonomous systems can reduce the risk of accidents when used correctly.
