

Incorrect Steps

Instruction:

Kalinda is working on a 360 piece puzzle with her mom. Kalinda can normally add 4 pieces per minute. Her mom can typically place half as many pieces per minute as Kalinda. How many hours will it take them to complete this puzzle?

Response:

```
# define the total number of pieces and the rate of work for both
total_pieces = 360
kalinda_rate = 4
mom_rate = kalinda_rate / 2
# calculate the total work
total_work = total_pieces / kalinda_rate + total_pieces / mom_rate
# calculate the total time in minutes
total_time_minutes = total_work * 60
# convert the total time to hours
total_time_hours = total_time_minutes / 60
# print the result
print(total_time_hours)
```

(a)

Redundant Steps

Instruction:

Helen the hippo and her friends are preparing for thanksgiving at Helen's house. Helen baked 144 chocolate chip cookies and 397 raisin cookies yesterday. And she baked 85 raisin cookies and 403 chocolate chip cookies this morning. How many raisin cookies did Helen bake? Let's write a program.

Response:

```
# define the number of cookies baked yesterday and this morning\nyesterday_cookies = 144 + 397
today_cookies = 85 + 403
# calculate the total number of raisin cookies
total_raisin_cookies = yesterday_cookies + today_cookies
# print the result
print(total_raisin_cookies)
```

(b)
