

初级数学计算

Instruction :

Toulouse has twice as many sheep as Charleston.
Charleston has 4 times as many sheep as Seattle.
How many sheep do Toulouse, Charleston, and Seattle have together if Seattle has 20 sheep?

Response:

```
# define the number of sheep in Seattle
seattle_sheep = 20
# calculate the number of sheep in Charleston
charleston_sheep = 4 * seattle_sheep
# calculate the number of sheep in Toulouse
toulouse_sheep = 2 * charleston_sheep
# calculate the total number of sheep
total_sheep = seattle_sheep + charleston_sheep +
toulouse_sheep
# print the result
print(total_sheep)
Answer: 260
```

初等代数

Instruction :

For how many positive integer values of k does $kx^2 + 10x + k = 0$ have rational solutions?

Response:

```
import sympy as sp
x, k = sp.symbols('x k')
count = 0
for possible_k in range(1, 100):
    # we can limit the range of k for practical purposes
    equation = possible_k*x**2 + 10*x + possible_k
    solutions = sp.solve(equation, x)
    if all(sol.is_rational for sol in solutions):
        count += 1
print(count)
Answer: 3
```

初等几何

Instruction :

A water tank in the shape of a right circular cylinder has a base radius of 30 meters and a volume of 2700π cubic meters. What is the number of meters in the height of the tank?

Response:

Let the height measure h meters.
By the formula for the area of a cylinder, which states that $V = \pi r^2 h$
where V , r , h denote volume, radius and height respectively, we have $2700\pi = \pi(30)^2 h$
Solving yields $h = 3$ meters.
Answer: 3 meters
