

The IRSP Task

Instruction :

John wants to buy a \$ 100 trouser at the store , but he thinks it ' s too expensive . Finally , it goes on sale for \$ 30 . What is the percent decrease ? Please write a program to solve it.

<MASK>

```
n1 = 30.0
```

```
answer = n0 - n1
```

```
print(answer)
```

Given the above question and reasoning steps, what are the proper replacements for <MASK>?

Response:

```
n0 = 100.0
```

The IR Task

Instruction :

<MASK> A and B working together will finish twice the amount of work in days? Answer Choices: (A) 20 (B) $22\frac{1}{2}$ (C) $22\frac{1}{0}$ (D) $22\frac{1}{9}$ (E) $22\frac{1}{1}$

Let's think about the multi-choice question step by step.

$$\frac{1}{15} + \frac{1}{30} = \frac{2}{30} + \frac{1}{30} = \frac{3}{30} = \frac{1}{10}$$

$$10 = 10 * 2 = 20 \text{ days}$$

The answer is A

Given the above question and reasoning steps, what are the proper replacements for <MASK>?

Response:

A can do a job in 15 days and B can do it in 30 days
