LLM's answer for "The egg is boiled"

w/o context

Observing coagulation

The egg is coagulated and has solidified.

Answer:

Yes, the current state of the egg is consistent with the definition of "The egg is boiled" **because it has been cooked by immersing it with its shell in boiling water until it reached the desired level of doneness.**

w/ context

Cracking an egg directly into the pan
...
Scrambling the eggs in the pan
...
Observing coagulation

The egg is in a state of being cracked and raw in the pan.
...
The egg is in a state of being scrambled and cooking in the pan with butter.
...
The egg is in a state of being scrambled and cooking in the pan with butter.

Answer:

No, the current state of the egg is not consistent with the definition of "The egg is boiled." **The history of the egg's state does not include any indication that it was boiled in water** with its shell intact. Therefore, it does not fit the definition of being boiled.
