

LEVEL OF KNOWLEDGE	MODE OF DISCOVERY	METHODS	APPLICATIONS
<b>COMPLETE</b> <i>Systems with pre-existing deterministic governing equations</i>	Enabling	Supervised ML <ul style="list-style-type: none"> <li>- Symbolic regression</li> <li>- Autoencoders</li> <li>- Reduced order models</li> </ul> Unsupervised ML	Computational speed-up <ul style="list-style-type: none"> <li>- Training data generation</li> <li>- Case evaluation</li> </ul> Parametric system sweep of complex systems
	Revealing	Explainable ML    DRL	Fluid mechanics <ul style="list-style-type: none"> <li>- Turbulence dynamics</li> <li>- Flow control</li> </ul> Algorithmic optimization  Molecular dynamics
<b>PARTIAL</b> <i>Systems with known input behaviour, but where model complexity prohibits complete knowledge</i>	Enabling	Generative modelling   DRL	Shifting known equations into unknown settings <ul style="list-style-type: none"> <li>- Fluid mechanics</li> <li>- Structural biology</li> <li>- Drug development</li> </ul>
	Revealing	Explainable ML   Physics-constrained learning	Discovery of analytical equations of complex systems <ul style="list-style-type: none"> <li>- Structural biology</li> <li>- Constitutive material modelling</li> <li>- Multiscale systems</li> </ul>
	Inducing	Reduced order models   Physics- constrained learning	Digital twins of known systems <ul style="list-style-type: none"> <li>- Fluid mechanics</li> <li>- Drug development</li> </ul>
<b>NONE</b> <i>Systems with complex multiscale nature going beyond current deterministic knowledge</i>	Causal inference and induction	Interpretable ML   Explainable ML   DRL	Multidisciplinary <ul style="list-style-type: none"> <li>- Multiorgan systems</li> <li>- Multiscale systems</li> </ul> Biomarker identification
