

*Evaluate the required elements  
on quantum computer*

$$[\mathcal{F}(\mathcal{H})]_{n'n} = \langle \phi_{n'} | \mathcal{H} | \phi_n \rangle$$

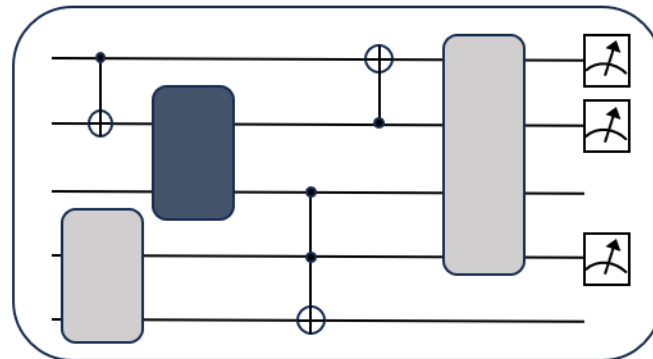

$$[\mathbf{s}]_n = \langle \phi_n | \phi_0 \rangle$$

*Solve the subspace linear system  
of equations problem on classical  
computer*

$$\mathcal{F}(\mathcal{H})\mathbf{c} = \mathbf{s}$$

*Reconstruct the target quantum state  
on quantum computer*

$$|\tilde{\mathbf{x}}\rangle = \sum_{n=0}^{M-1} c_n e^{-i\mathcal{H}n\tau} |\mathbf{b}\rangle$$
