

mymath.py &gt; calculate\_average

```
1 def calculate_average(numbers):  
2     """  
3     Calculate and return the  
4     average of a list of numbers.  
5     """  
6     total = sum(numbers)  
7     count = len(numbers)  
     return total/count
```

 You should add type annotations to your code! Type annotations were introduced in Python 3.5. They are used to indicate the type of a variable or a function. You can read more on the official documentation: <https://docs.python.org/3/library/typing.html>
