

Observed sequence

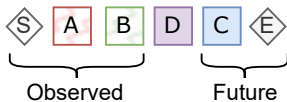

Goal: Estimate

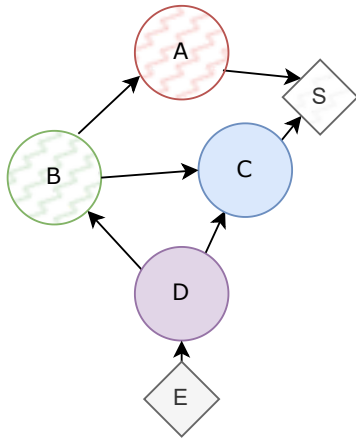

$$P(\langle S, A, B, D, C, E \rangle | Z) = P(S|Z) \cdot P(A|S, Z) \cdot P(B|A, S, Z) \cdot P(D|S, A, B, Z) \cdot \dots P(E|S, A, B, D, C, E, Z)$$

Example: estimate

$$P(D|S, A, B, Z)$$

Graph G

Adjacency Matrix Z

	S	A	B	C	D	E
S	0	0	0	0	0	0
A	0.7	0	0.1	0.1	0.1	0
B	0.05	0.45	0	0.4	0.1	0
C	0.7	0.2	0.05	0	0.05	0
D	0.05	0.1	0.4	0.35	0	0
E	0	0.05	0.05	0.05	0.85	0

 Observed
Key-steps

Feasibility

0.95
0.55
0.1

$$P(D|S, A, B, Z) = \frac{f(D|S, A, B, Z)}{f(C|S, A, B, Z) + f(D|S, A, B, Z) + f(E|S, A, B, Z)} = \frac{0.55}{1.6} = 0.34$$
