

$$A_{T_{\text{eq}}} \sum_{t=0}^{T_{\text{eq}}} \left[\begin{array}{c} Q_{S,1} \quad Q_{S,2} \quad \dots \quad Q_{S,T} \\ \begin{array}{c} K_{S,1} \\ K_{S,2} \\ \vdots \\ K_{S,T} \end{array} \begin{array}{cc} \begin{array}{cc} A_{S,1} & A_{S,2} \end{array} \\ \begin{array}{cc} A_{S,2} & A_{S,2} \end{array} \\ \vdots \\ \begin{array}{cc} A_{S,t} & A_{S,t} \end{array} \end{array} \dots \begin{array}{c} \begin{array}{c} A_{S,t} \\ A_{S,t} \\ \vdots \\ A_{S,t} \end{array} \end{array} \end{array} \right]$$

The diagram illustrates a tensor contraction operation. The main expression is a sum over $t=0$ to T_{eq} of a product of several tensors. The tensors are represented as blocks:

- $Q_{S,1}, Q_{S,2}, \dots, Q_{S,T}$: A sequence of tensors, each with two indices (one vertical, one horizontal).
- $K_{S,1}, K_{S,2}, \dots, K_{S,T}$: A sequence of tensors, each with two indices (one vertical, one horizontal).
- $A_{S,1}, A_{S,2}, \dots, A_{S,t}$: A sequence of tensors, each with two indices (one vertical, one horizontal).

The tensors are grouped into a large bracketed structure. The first part of the bracketed structure is a product of $Q_{S,1}, Q_{S,2}, \dots, Q_{S,T}$ and $K_{S,1}, K_{S,2}, \dots, K_{S,T}$. The second part is a product of $A_{S,t}$ and $A_{S,t}$. The entire expression is then multiplied by a tensor $S_{Q,t}$ (orange block, $n \times d$), which is then multiplied by a tensor $K_{S,t}^T$ (blue block, $d \times n$). This is followed by a plus sign and a product of a tensor $Q_{s,t}$ (orange block, $n \times d$) and a tensor $S_{K,t}^T$ (blue block, $d \times n$). Finally, there is a minus sign and a product of a tensor $Q_{s,t}$ (orange block, $n \times d$) and a tensor $K_{s,t}^T$ (blue block, $d \times n$).
