

$$\sum_{t=0}^{O_T} \left(\begin{matrix} X_{s,1} & O_{s,1} \\ X_{s,2} & O_{s,2} \\ \vdots & \vdots \\ X_{s,T} & O_{s,t} \end{matrix} \right)^T W$$

The diagram illustrates a matrix multiplication operation. On the left, a large matrix is shown, partitioned into two columns. The first column contains elements $X_{s,1}, X_{s,2}, \dots, X_{s,T}$, and the second column contains elements $O_{s,1}, O_{s,2}, \dots, O_{s,t}$. The entire matrix is enclosed in a large black bracket. A dashed green box highlights the second column, which is labeled $O_{s,t}$. To the right of this matrix is a large green dashed box containing two matrices. The first matrix is labeled $X_{s,t}$ and has dimensions $n \times d$. It is a grid of 3 rows and 2 columns, with each cell containing a waveform. The second matrix is labeled W^T and has dimensions $d \times d$. It is a 2x2 grid of light gray squares. A large \times symbol is placed between the two matrices in the green dashed box.
