

Method	2D Rotary Position Encoding (RoPE)	3D Rotary Position Encoding(3D-RPE)
Schematic Drawing	(a) 	(b) 
Formula	$f_{\{q,k\}}(\mathbf{h}, m) = e^{im\theta} \mathbf{h}$	$f_{\{q,k\}}(\mathbf{h}, m, j) = e^{im\theta} (\cos \varphi_j \mathbf{h}^\perp + \sin \varphi_j \mathbf{h})$
Long-term Decay	(c) relative upper bound 	(d) relative upper bound  chunk size $c = 1000$
Position Resolution	(e) $\mathbf{PI} \quad \varepsilon_{rope} = 1 \longrightarrow \varepsilon'_{rope} = \frac{L_p}{L}$	(f) $\mathbf{PI} \quad \varepsilon_{3d-rpe} = 1 \longrightarrow \varepsilon'_{3d-rpe} > \frac{L_p}{L}$
