

```
public String readString() {  
    int c = read();  
    while (isSpaceChar(c))  
        c = read();  
    StringBuilder res = new StringBuilder();  
    do {  
        ...  
    }  
}
```

```
public int readInt() {  
    int c = read();  
    while (isSpaceChar(c))  
        c = read();  
    int sgn = 1;  
    if (c == '-') {  
        ...  
    }  
}
```

## Code Encapsulation

```
public String readString() {  
    int c = extracted_0();  
    StringBuilder res = new StringBuilder();  
    do {  
        ...  
    }  
}
```

```
public int readInt() {  
    int c = extracted_0();  
    int sgn = 1;  
    if (c == '-') {  
        ...  
    }  
}
```
